> address listed on the database isn't correct.

O.K. O.M. Good luck in the contest!

Also, there is a local
> repeater with a voice ID'er with a woman's voice saying the callsign,
> but I have never heard a woman with the name of Jeff , which is the name
> of the control operator. Who really gives a rat's ass anyway, I sure as
> hell don't.

Then why did you reply? Oh, I know... flame the tech night on the trailer park net!

> You mentioned marine, I assume you mean boating,
> sailing,etc? I would sure feel stupid calling left and right port and
> starboard in daily life, but it is perfectly acceptable in the marine
> world.

I feel equally as dumb calling myself by my call sign when I am not on the radio. But then I don't care what other hams call themselves - I was just asking why. But you didn't think about answering the question - you just

wanted to flame.

> So what's the big deal calling yourself by your callsign, it's
> expected in the amateur radio community.

I didn't say it was a big deal. Call yourself whatever you want. But it sure seems to be a big deal to some around these newsgroups - and the last time I checked part 97, a call sign was not required to "transmit on a newsgroup."

> Signed, N0EE (look it up," Lisa,"(is that your name, or your "handle")

it's like this...

I ship CB equiptment and player piano rolls and supplies all over the world.

about 1% of the COD's are ever returned. also remember that sometimes it is UPS that screws up, not leaving stickers on the doors ect. UPS has sucked every since the teamsters won the strike. I wont use them if i can help it.

But if someone does refuse a package, don't sweat it. it is just part of doing busisness. Just make sure that you make them pay for the sipping before you will send them anything else. Don't punish others by this one bad egg.......or you will end up losing customers,

Kickin back
Andy

axel wrote in message <7csae1$2fj$1@news-1.news.gte.net>...

when
> you ID you station with your station CALL SIGN. aren't you telling people who
you
> are and if you have the privledges to transmitt on that portion of the band?

Not really. There are two instruments of authority wrapped into one piece of
paper on a amateur license. The station license and the operator license.
The call sign is part of the station license. Every ten minutes and at the
end of each contact you are required to "pause for station identification",
so to speak.

An amateur station license is normally held by a licensed operator. The
"class of call sign (A,B,C,D) can be related to the licensee's operating
privleges. If you heard a station using a class D call sign (2x3) on the
extra portion of an HF band, you would have to look it up to see if the
licensee was an extra (he/she is not required to "upgrade" their station call
sign when the upgrade operating privleges).

> also
> when someone calls you back using your call doesn't it identify you.. Ex:
KD6ELA
> This is KA8TOK this in turn want you to respond hence you are being
Identified by
> call not name..

Sort of. But I could contact you by calling, "Brad, this is Curtis."

Whats the first thing you ask when you make a contact with someone for the
first time? "Name here is Brad, what's your's?" What's the call sign dance
for?

But it may not be me at the controls of "KD6ELA" so it does not positively ID
me as the person you are talking to.

> Let's face it a Radio is not going to ID itself without some
form
> of voice or code ID set up by a human being and it's true most stations are
IDed
> with a call sign and that call does ID the individual that Has the right to
those

> Frequencies that are assigned to them by there License Class for that call.

You said it right there - "a radio is not going to identify itself". You identify the radio with the call sign, not the operator.

What if I was riding with you in your car and you let me use your radio. Who's call sign do I use? Your's - it's your station.

Since I am a licensed operator, you could allow me to use your station when you are not even there. I would be a designated control operator of your station, and would still use your call sign.

Club stations, special event stations are the same way. Someone is the trustee and he/she can designate control operators. The control ops use the same call sign to identify the station, not themsleves. I can use a club station where I work and use only K6CHV - even I am the only one there, I have no obligation to use my station call. In fact it would be inappropriate for me to ID using my own call because it's not my station.

> If it
> were not so then how do you explain Amateur radio Call books or CD-ROMs?

I guess it's because we are hung on callsigns. Thats what I was asking about. Just something I thought I would bring up to steer us away from totally off-topic subject of Chuck Heston. Actually it is an easy way to identify a station licensee - the first person you go to over interference issues, etc. And yes it's also useful for sending QSL cards if you are into that kinda thing.

If you have a CD-ROM or use a net based server to look up calls you hear on the air, if the call is being used properly, the only thing you will idnetify is the licensee of the station. The call sign does not tell you who is operating the station (though 99 time out 100 it is the station licensee.)

There was a proposal a while back that would have let amateur operator licenses be good for life. No need to retest if you didn't renew in the grace period and you could operate forever. But statutorily, the FCC cannot issue an amateur station license for more than a 10 year term. Under this proposal your operating privleges lasted forever but your station license would have to be renewed every ten years. In other words, your call sign would expire. You could operate someone elses station if they said it was OK, but your station license would no longer be valid.

I really don't care about people identifying themselves with their station call. I just have to laugh when I see messages in these newsgroups, particularly flames, with things like "you didn't include your call sign, you must not be a ham", or "if you want to express you opinion, you'd better give a call sign". Or like Charlie did - figures a call is the only thing *anybody* needs to figure out who he is.

I guess I think of it as "call sign worship". Belt buckles, hats, doormats....etc.

BTW - I mentioned that I don't live in the city that appears on my amatuer license. But my posts contain all you need to figure out the city... just in case N0EE was wondering.

[I have posted this to r.r.a.misc only. The origination of the "wish I could broadcast this" thread was off-topic to begin with, but even this call sign discussion doesn't belong on .swap or .boatanchors. I suppose it could go on r.r.a.same.old.code.debate... ahem ... I mean rec.radio.amateur.policy]

I have an issue pending with Copper right now. I asked for shipment to be COD will call and they shipped to my house. They now want me to pay them shipping for something I never received. They wasted $10 shipping and I wasted almost 2 weeks running back and forth to UPS. It is a no-win for both of us.

OK. :) I'm in charge of souping up an old Robot 400... yes, you read that right. :) I'd like to know what modes it does, right out of the box. (I know they're all black and white. What are the *names*? Is it compatible with other scan convertors/computers, other than a Robot 400, or are all of its modes dead?)

Also, I've heard that there are several mods to make it do colour, etc., etc. Altavista search turns up nothing, but I need this... does anyone have info that they can send me? Thanks a lot.

2. To be tolerant, one must disagree the other person's views. Since
you seem supportive, you are more of an advocate. How tolerant
are you of, say, the religious right?

My definition of tolerance appears to be the same as yours. Am I
mistaken or is tolerance one of this country's major virtues? BTW, I am
quite tolerant of the so-called religious right since some of their
ideas do make sense--like family virtues; I also tolerate gay and
lesbian individuals, people who sell oranges on street corners, juries
who make stupid decisions a la OJ, and most important of all--No Code
advocates :-).

I think that was a little out of line, Oris. There are some very fine folks who participate in CB--a good cross section of the US population. And a number of them also have a ham ticket.

Yeah, there's a few "bad eggs" on 11 meters. Come to think of it, there's a few among Amateurs, also! Let's not get into a ham vs CB fight.

>>>>Another WHINER about no-code techs as well as California. The guy makes a living, pays taxes, isn't a drain on our society, and is an excellent teacher. Is there a problem with that?<<<<

(1) The problem is not with "No Code Techs", it's with poorly trained No Code Techs. THEY don't realize until they've made a fool of themselves on the air that the "classes" did absolutely NOTHING to prepare them for operating an Amateur Radio Station properly.

(2) The comments were not directed at "California", but at the myriad of trash and garbage spewing repeaters in Southern California, which coincidentally is also the stomping grounds of His Excellency Sir Gordo and his faithful following of weekend wonder "licensee's.

(3) When someone makes a profit by unloading these poorly trained, ill-equipped operators upon the Amateur Radio community, it IS a problem. Especially operators that ignore emergency calls, preempt use of active simplex frequencies for singular personal use, and display overall poor operating techniques until corrected by other Hams who didn't get paid for the "priviledge" of training them. As for paying his taxes, on that I cannot comment as I have no knowledge of his 1040's.

>>>He could be selling tacos in front of your house [another thread :)]<<<

If he was selling tacos in front of my house, he'd be pretty poor. There's only 20 houses within a mile of me.

Here we go again with famous federal government "double-speak". I was reading WORLDRADIO last evening, with their news and comment regarding net operation, and how NOBODY has exclusive "property rights" to a frequency.

If that is the case, I'll meet you on 3581 KHz tonight! And the minute W1AW comes on frequency and jams me, I'm calling Hollingsworth!!!

6528. Advanced VideoTech Microtalk

I have a question about the Advanced VideoTech Microtalk radio's. Has anyone ever used these? What are your experiences? Do they really work as well as they say they do?

Any help and info is appreciated.

Jeremiah

Mark,

Most of the hamfests I have attended (larger ones) have forums on various
subjects. i.e. VHF/UHF, MARS, NTS (National Traffic System)etc. But I
agree that more of these need to be included. And to the "sig expired"..
glad your not a ham. We don't need anymore of your type anyway.

>more than I sell; even cash-only COD's are much more convenient for me.

If you mail someone money-order with verbal promise to ship product,
mail fraud was not committed. No law about sending money in mail.
No legal proof an agreement was made at all.

By sending COD the mail service becomes a player in the situation.
Said product was promised for X amount. If box turns out to be
full of rocks ... MAIL FRAUD.

I also would not deal with someone who wouldn't agree to COD ... best
for buyer and seller.

To all DXers and Wannabees,

I uncovered an interesting URL that I need to
share with all the DXers and Wannabees..

http://www.nolizards.org/

Real DXers use skill, timing, patience, knowledge,
tuned antennas and equipment, and listening techniques,
not sitting in their apartment with a slinky nailed to the wall,
joining a net to exchange a 4 by 4 report, ruled by a pompous king
net controller yelling LAST TWO.

Go to the web site and you'll get the picture

The amateur brotherhood was established in 1946 by clandestine members of an almost forgotten religious zealot sect from the darkest corner of the Ozarks. To become a member of the "brotherhood" one would have to endure 72hrs of continuous loop audio tape, with a terse voice shouting "CONTEST-CQ-CONTEST" over and over. Once Step 1 was completed, the potential member would be led into another chamber where they would be tied to a chair, directly underneath a bucket, which - when tipped, would drop dit's and dah's on their sweaty forehead, while the "Brotherhood" choir would chant: "CODE IS GOOD, CODE IS GOD, CODE IS THE ALL POWERFUL". 48hrs later (if he was still willing), he would be led into a large room where they would dance naked around a fire, finally slaughtering a herd of pigs (thus the moniker- "Ham"), and feast upon the improperly cooked flesh. Finally, the new member would swap underwear with member sitting next to him, and swear that he would be forever above stealing or lying. And now you know......the rest of the story.

In <36F37008.C4D3CD96@asu.uswest.net>, Will White <wcw@asu.uswest.net> writes:

>Just an idle thought I had, as I was browsing my radio books: why are so
>many, and at one time nearly all, radio receivers designed to use IF
>frequencies of 455 kc and/or 10.7 mc? There must be some fundamental
>electronic principle that applies to this choice, I can't imagine these
>IFs are only a matter of convention and interchangeability of parts. So,
>how were these frequencies chosen, and why have they remained the
>overwhelming favorites?

The "RCA Raditron Designer's Handbook", 3rd edition, that I have here,
indicates that 455-465 kHz was well standardized by 1945. It lists:
110 Kc/s - "Has been used widely in Europe where the long wave band is in use.
This gives extremely good selectivity but serious side band cutting."
175 Kc/s - broadcast band in America and Australia; not satisfactory on shortwave.
250-275 Kc/s - compromise between 175 and 465 Kc/s
455-465 Kc/s - "dual wave receivers". Footnote says that
455 Kc/s is receiving universal acceptance as a standard frequency and efforts
are being made to maintain this frequency free from radio interference.
1600 Kc/s - for shortwave receivers not used for broadcast band. The book
says at such high frequencies one or two additional IF stages are needed.

(High ? When I can pick up transistors for a buck or two with an Ft of 2.5 GHz,
this sounds strange to me.)

Chapter 15 of the Radiotron book says that 455 Kc/s puts the image frequency far
enough away that only one tuned RF circuit is needed ahead of the RF strip.

So, likely 455 kHz became standardized when it was convenient to work with
with the technology of the '40s, and persists to this day because there's no
big reason to change it.

The Radiotron Designer's Handbook is silent on the 10.7 MHz choice for FM
broadcast band IF - it doesn't seem to have anything about FM in the index
(nothing under "Frequency Modulation" or "Detectors " or "Discriminators"
or even "Foster Seely").

Well
I hope he gets it and I hope he upgrades. I'll tell you why. I bet you
dollar to donut that he will have more respect for the service once he
works hard to get the ticket. I bet he will get on Ten and have the time
of his life. Ten is wide open. Dan I bet he will be a different person.
Then Riley won't pull his ticket. Now if he gets his ticket and acts
like a idoit then I hope Riley yanks his ticket then all that hard work
will be for nothing. SO the choice is his. To be honest with you I hope
he gets it and he'll see why we complain when a person boot legs the
bands.

Because ebay isn't part of the deal. They just provide the mechanism
for bringing the buyer and seller together. The deal itself is
between the buyer and seller.

There are other companies that will do that though. TradeSafe and
i-Escrow will both take the buyers credit card, and hold the money
until the deal is completed to the buyer's satisfaction, then
forward a check to the seller - for a fee. They don't limit their
business to ebay - they would also be useful for a deal made through
the newsgroup.

I've used an escrow service as a seller, and it works quite well as
long as you've honestly described the item you're selling. The buyer
isn't too likely to back out, because he customarily has to pay the
escrow fees, and they are due whether the deal is completed or not,
and if he rejects the equipment the return shipping fees must be
paid by the buyer, so there's not a lot or risk on the seller's
part (as long as he's honest). The buyer doesn't get his money back
on a rejected deal until the equipment is safely back in the hands
of the seller, in it's original condition.

If you're really worried about who you're buying from, an escrow
service is ideal.

Getting the export radios banned may help, but since anyone (licensed or not) can legally buy any amateur radio gear, it won't solve the problem. Once the imports are gone it won't take truckers long to find the local Radio Shack...

==========

The ARRL Antenna Book has such an antenna designed for 40 meters. It calls for 3 to 5 sloping dipoles around a tower, each fed with a specific length (wavelength) of coax from a relay box on the tower. The ends of the coax of the unused dipoles are shorted in the relay switch box, effectivly lengthing the unused dipoles by about 5%, making all but the selected dipole a reflector. As I recall, this antenna does not have a lot of forward gain, but has a large front to back ratio.

It can also be scaled for the other bands.

73 de CT2FYI.
Victor is my name and I live near Lisbon, Portugal.
Welcome to the Ham. I'm on since 3 years ago and I enjoy also the HF
,the DX's and local contacts.
Here are now starting a new solar cycle with a very good improvement
of the propagation that means we will had very good contacts all over
the world.
I enjoy also the Net but Ham is Ham...

I hope to meet you on the bands, Modesto, wish you good DX's.

73 from CT2FYI in Portugal.

Just an idle thought I had, as I was browsing my radio books: why are so
many, and at one time nearly all, radio receivers designed to use IF
frequencies of 455 kc and/or 10.7 mc? There must be some fundamental
electronic principle that applies to this choice, I can't imagine these
IFs are only a matter of convention and interchangeability of parts. So,
how were these frequencies chosen, and why have they remained the
overwhelming favorites?

> What a SHAME that critics of the NRA so EAGERLY assume that all it's
> about is nasty GUNS! Fact IS, the NRA is about individual freedoms and
> the rights of ALL, combined with access to the tools, to most properly
> maintain it - as outlined and established in our country's Bill of
> Rights -

I agree. If one set of rights is comprimized, when does it stop? Geee, my company is already trying to stop the right to free speach. I got into an altercation reciently about a comment I made opposing one of the corporate scared cows. I got the usual, obligatory meeting with the 'managers". They were really laying down the law acording to them until I brought out a copy of the first ten ammendments of the constitution and proceded to read them. Wow, dead silence! Hmmmmmmmm. I asked them how much they felt violating my constitutional rights was worth to them. They became very friendly and apoligetic all of a sudden. I work for a fortune 500 company, have for 20 years, and have never seen such a degridation in individual rights as I have seen since around 1990. My point, if you do not stand up for your rights, you will loose them. I could have stood passively by and let those corporate assholes intimidate me and feel they got away with it. But, I would have set a corporate wide precident. As we all know, our legal system is based on earlier interpretations of the laws or precidents. If I would have caved in, then the company would have felt free to violate the rights of others. Now, I am making them rethink some of their policies. Now that they know they may have to shell out for a huge law suit, some of their policies may no longer look quite so attractive.

It is up to each and everyone of us to blow the whistle on violations of our constitutional rights. If we don't, and we let them get away with it long enough, then we will loose those rights. This is essentially why the NRA lobbies so strongly against ANY gun control. I'm sure that some of it makes sence to them, but if they cave in to any comprimise with respect to our rights, then again I ask, where will it stop? How long before you can't have a certain weapon, or whatever because some fool used one in a hold up? How long before you loose the right to keep and bear arms? or in my case, how long before I loose the right of free speach?

B.B.

There's also 9 MHz.

International, commercial and military and amateur transmitters, after many years of gentlemen's undersatanding and agreement, don't transmit on frequencies reserved for receiver intermediate frequencies. It makes for less expensive receiver design.

455 and 465 came about because they lie between the long wave and medium wave broadcast bands. They are high enough to make second-channel interference not to difficult to get rid of.

9MHz is high enough to get rid of 2nd-channel interference on the shortwave bands. Sometimes 455 KHz is used on the cheaper SW broadcast receivers and 2nd-channel interference shows up with strong broadcast stations being heard twice - seperated on the dial by twice the IF.

And 10.7 MHz is fine for VHF FM. It falls in between the principal SW bands. It is also related to VHF broadcasting channel spacing. The bandwidth for FM broadcasting is 150 KHz and so must be the receiver IF transformers. This broadband made the choice of IF for FM broadcast receivers a little more difficult and ruled out 9MHz for that purpose.

IF standardisation also makes life easier for radio receiver designers and permits bigger bank balances for radio receiver purchasers.

********* "RARSfest 99" *********

THE RALEIGH HAMFEST
and COMPUTER FAIR

SUNDAY, APRIL 11

NORTH CAROLINA STATE FAIRGROUNDS, RALEIGH

3000 attended last year! Giant, indoor flea market, plus plenty of
dealer and manufacturer booths, contests, meetings and forums, prizes,
VE Exams, and the famous "Saturday Night Social." Special demonstration
of HDTV (High Definition Digital Television) by WRAL-TV!

PRIZES: GRAND PRIZE: Icom 706 MKII HF/VHF
5 HOURLY PRIZES: Icom 207H Dual-Band Mobiles -
One Each Hour, 10 till 2 PM.
Pre-Registration: $125 CASH!
(winners do not have to be present)

Location: North Carolina State Fairgrounds, Jim Graham Building.
Follow the Interstate 440 Beltline around Raleigh, to
exit 3 - Hillsboro St., and go west one mile to the
Fairgrounds. The Jim Graham building is at the
Southwest corner of the fairgrounds, just off
Hillsboro St.

Date/Time: SUNDAY, April 11, 1999, 8 am to 4 pm.
Building opens at noon Saturday and 6 am Sunday for
dealer/vendor setup.

Admission: Pre-register: $5 (before April 2nd). Gate: $6.

Flea Market: Table/2 chairs: $10
(5 or more tables: $9 each).
120 Volt AC: $15 per connection.
Drive-In unloading/loading. Bring your own
extension cords and carts.

Parking: FREE on site!

Talk-In: 146.64 (147.15 is the backup)

VE Exams: Given in the Holshouser building on the Fairgrounds.
Walk-in registration and testing begin promptly at 11 a.m.
You must show a picture ID to register. Exams are $6.45.
Contact: Charlie W4VFJ, 919-556-8551 (exam information
only please) email: w4vfj@aol.com.

Meetings: ARRL Forum with Roanoke Division staff, Army and Navy MARS,

NTS, ARES, APRS and QRP forums. Times will be announced at
the Hamfest. No DXCC QSL card checking this year.

Mobile, Cash Prizes for Homebrew, Mobile HF and VHF Installation,
Homebrew, QLF (left foot) and QBH (Both Hips).
QLF/QBH Contact: Rick KA3PSK, 919-870-8268.
Contests

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest building.
Market: Admission to that flea-market is FREE!

Family Come make it a family event! Other activities available in
Activities: the area include the Fairgrounds Flea Market (free) and
Azalea Sale. A short drive offers Crabtree Valley Mall,
Blue Ridge Cinemas and NC Museum of Art.

Address: For tickets, tables, etc., make checks payable to
"RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Wilbur Goss
4425 Watkins Rd.
Raleigh, NC 27616

Requests received after April 2nd, or without S.A.S.E.,
will be held at the flea-market vendor door on the west
side of the building.

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-20 00:00:00 UTC
From: Vincent Coppola <vinyc@snet.net>
Message-ID: <36F3B113.E33@snet.net>
Source record: 147738

I am repairing my HP8553B pluggin for an HP141T spectrum analyzer. It has a serious sensitiviy problem, but does at least pass a signal. Can some one just email me a .GIF of the front end, block diagram, schematic whatever to get me started?

It looks like the signal tracks thru the attenuator then a passive filter and finally into a module with 200 mhz stamped on it. I am going to assume that is the first IF and I must be looking at a mixer.
Any help appreciated
Thanks,
Vince N1VC

In rec.radio.amateur.misc Reg Edwards <G4fgq.Regp@btinternet.com> wrote:

: There's also 9 MHz.

There may be other reasons, but I think one reason 9 Mhz became popular was that in the early days of ham ssb a single 5 to 5.5 Mhz local oscillator could be used to convert either 75 meter or 20 meter signals to a 9 Mhz i.f. A lot of projects published in the ham magazines and some commercial products used this combination.

I was just a 12 year old kid in 1954 when I became interested in radio and started reading ham magazines I bought with my paper route profits. I did quite a bit of tearing apart 1930s and 40s era broadcast radios to obtain parts for my various homebrew projects in those days. It is my impression that the use of 455 khz for home a.m. radios was well established by WWII. Automobile radios often used something around 265 khz, as they were built for better selectivity and snesitivity than home radios. The use of 10.7 was pretty much a standard established when the current f.m. band was allocated, I believe just after WWII when the current televison channels were established. I think the use of 9 Mhz for communications equipment came along quite a bit later and was largely driven by amateur designs and the amateur market.

: International, commercial and military and amateur
: transmitters, after many years of gentlemen's
: undersatanding and agreement, don't transmit on frequencies
: reserved for receiver intermediate frequencies. It makes
: for less expensive receiver design.

So true. A number of years ago I was involved in maintaining a 2 meter repeater that used tube-based Motorola equipment with an odd i.f. somewhere around 6 Mhz. A powerful Canadian commercial c.w. station used that frequency and somehow the signal got into our receiver. (The licensee was a Technician, this was before no-code days, but whether he had ever used c.w. on the air or could still pass the 5 wpm test was questionable. In any case he couldn't figure out the noise that was confusing the receiver. It was difficult to interpret, because the effect was to quiet the f.m. receiver when the c.w. signal was keyed, with a burst of noise between the dits and dahs.) I designed a 6 Mhz trap to keep the interfering signal out of the rceiver front end. This really points up the risks of a random choice of i.f. frequency.

Source record: 147743

In one important respect, once the commercial,
communications and broadcasting bands have been
internationally agreed, the set of optimum receiver IF's
are automatically pre-determined.

Very likely receiver IFs were taken into account when the
many bands were originally defined.

To prevent signal frequency harmonics (due to receiver
non-linearity) from combining with local oscillator
harmonics (generated in the synthesizers and mixers
themselves) to produce unwanted whistles and noise at the
IF, the IF has to be very carefully selected. Often there
is very little choice. It is a case of choosing the IF
which lets through the lowest number of birdies. The
probability statistics are very involved and there are
charts designed to assist with IF selection.

It's interesting to disconnect the antenna of an amateur
receiver which has 2 or 3 IF's and listen to the aviary.
And that is only a faction of spurous signals and noise
generated at IF when the antenna is reconnected.

454 and 468 kHz were ship working frequencies for some 75
years. One would think that 454 would especially be troublesome
for a 455 IF. The MF maritime band ran from 405 to 535 kHz.

Can I surf the web via radio?
Just like for new kitchen robots...
Where do I find the cheepest components?
Where do I find them used?
How much do they cost?
Which software to navigate via radio?
Where do I find it?
Is there any mailing list for packet radios?
Thanks,
Gabriele Betti

Freedom of speech, expressions of substantive opinion,
and free exchange of ideas are desirable and valid in
USENET. Moreover, let us hope the bureaucratic, intrusive
federal government never gets itself involved in these areas.

The malicious defamation which we have seen in this news
group, however, does NOT represent the free exchange of
ideas, freedom of speech, or valid opinion. Malicious
defamation is intended to defame a person. When published
in a news group, malicious defamation is libel and is
actionable in a lawsuit. Such lawsuits do NOT in any way
hamper, interfere, or intimidate the free exchange ideas or
one's freedom of speech.

Believe what you wish people and feel free to roll the
legal dice before hizzzonner. We've presented postings
from this news group for discussion in a legal forum, and
the grounds for a libel lawsuit were self-evident.

If you published it here, be prepared to prove it
there before hizzzonner.

Do you know what it's called to send someone a money order in advance for "pre-payment"? It's called a gift! Just remember to research the buyer/seller and as mentioned disclosure is important with verifiable references. Another good idea is to require the shipping cost up front as per your arrangement with the party. If both the buyer and the seller know who they are dealing with and if both have been researched and checked out, you minimize the chances of becoming a victim. Just my $0.02 cents.

Gary

I am a member of a society that collects old computers and restores them to operating condition for educational purposes. We also have several members that are amateurs.

In the spirit of April 1 RFC's we came up with MPP, or the Morse Packet Protocol. I'll have to dig it up off a server and post it but it involved using a DEC PDP-12 to key a 1KW cw rig at some obscene keying rates but at the same time has the capability to drop back to slower speeds as conditions change.

We also thought of methods to connect this PDP-12 to the ethernet and therefore have real IP connectivity via morse code. Strange but true.

For the most part, it is illegal to wear headphones while driving.....if you research this, you will find this is aimed at cars, trucks,vans..etc. CLOSED vehicles. It is aimed at being able to HEAR an emergency vehicle when the siren is going. When on a motorcycle, you are out in the environment and are open to sounds around you EVEN when you have headphones in you helmet. The dB level of the sirens is great enough to still get to the cyclist ears........check you local and state laws closely and you will find the loopholes(so to speak).

It depends upon which state you are riding in. Some restrict helmet headphones, and a few ban them altogether. FWIW, the H-D touring atlas includes a comprehensive listing of state regulations that motorcyclists would find of interest. Email me if you want specifics.

Free Speakers are a threat. You should have to be registered and
fingerprinted before being allowed to Speak Freely. Also, there needs to be
limits on how much Free Speech you can dispense. For example, you should
only be allowed to Speak Freely once each month, and after having waited a

week "cooling off" period. Religion is a threat. You should have to be registered and fingerprinted before being allowed to practice your Religion. Also, there needs to be limits on how much Religion you can practise. For example, you should only be allowed to practice Religion on Mondays. People who Freely Associate are a threat...

Eewww. I don't like where this is going.

also a B.B.

Good reason for not wearing a darn helmet to begin with. makes the tire
sounds too muffed, wind not whistling and you have to purchase louder pipes
just to hear the putt putt purr

One thing I suggest, is that you don't look down upon yourself or the hobby you're participating in. Granted there are not the same kind of nice, respectful, caring operators on the radio all the time (no one is alike), but sometimes we have to filter through all the bad and really try and think why we really like this hobby so much. Like I said, it may take time, for her opinion to change, and by change I mean she may learn to accept it. But I'm sure she wants you to be happy, so if you don't enjoy your participation of exchanges with other Hams, then advoid them and have fun talking to others or with your family. And about your daughter, I say always keep it around her. I learned to pick up some code phrases just from hearing the code from my room at nights. My dad did (with friends) a short presentation at both my

elementary and middle schools about Amateur Ham Radio and I loved being a part of it. Loved being able to say that was my father, and that's what I get to watch/do when he's at home, etc. Because I have been in my house with Ham radio all the time, I began to want to be a part of it, and I will never see anything wrong with that.

73,

All you have to do is read rec.radio.cb and see linears and export
(out of band) radios openly sold and encouraged. Heck, I just saw a
posting about a big linear amplifier contest in Detroit. If the FCC
can't enforce such open violation of the rules I think those who fear
reduction in CW requirements (leading to degradation of ARS
frequencies) have a very good reason to feel as they do.

I have the Gap Voyager DX. I find it a excellent radiator on 80 and 40,
fair on 160 and poor on 20. Mechanically it is very good. The electrical
design is excellent.

97.1 Basis and purpose.
(d) Expansion of the existing reservoir within the amateur radio
SERVICE of trained operators, technicians, and electronics experts.

:-Rights - the rights of INDIVIDUALS! The NRA, and its members
basically

What people fail to realize is that the "Bill of Rights" is not a document which defines rights given by the US government to its citizens. Rather, the BoR merely states for all the World to see that certain rights are inherent (inalienable) in ALL humans.

All humans, whether in the USA or Kosovo are born with the right of free speech, the right to be secure in their homes and the others spelled out in that precious document.

It is only in this country and perhaps, to a limited degree, a very few others, that our government, through the founding fathers, proclaimed that these right MAY NOT BE TAKEN AWAY! You see, God given rights may not be given by governments, they may ONLY be taken away!

We, in this country, are so very fortunate. We have had the wisdom of Jefferson, Madison, and other brave men who themselves had everything to lose and little to gain. Through them, we Americans are the most free peoples on earth.

Ask the folks in China or Kosovo just what freedom of speech is. They would look you in the eye and not be able to answer. How about the right to bear arms. We have that right (in the near term) and I carry a pistol with no fear of reprisal from law enforcement so long as I break no laws. In many other countries just having a weapon will land

you in jail, or worse!

No, my friends, the NRA is a manifestation of the BoR in its broadest meaning. FREEDOM FROM GOVERNMENT!

:-feel that without the "enforcement" capability provided by the second
:-amendment, all the rest are uninforceable when push comes to shove...
:-Sort of what would happen in civil law enforcement if we only had
:-police, but no judges or prisons to actually ENFORCE controls upon
:-those who disregard our laws.
:-
:->

Howdy's

Looking for a FT-847 with FC-20 antenna tuner. Would be willing to trade a excelent condition FT-767GX HF-2meters (Built in PS, antenna tuner and ctss board) and a Fuji DS-7 digital camera (2meg card 640x480 holds up to 64 pictures, includes transfer cable and software for PC) to make up the difference. Short on space in the new shack, so the 767 has to go.

Thanks,
Grego, N8PPZ
Watching from "THE SPOT" at Wright Patterson Air Force Base

Yes, I have MFJ's QRP transciever; it's a portable unit consisting
of three modules: the transciever, a tuner, and power supply (batteries).
Just tonight I took it outside at work and made contact with my friend
using a long wire to a tree -- the signal was much better.

>he was really astonished, when i made a qso with YO3GJC, and with a

I tried an outside antenna tonight at work and it's much better. What
size wire are you using? I was using 14ga and is fairly heavy over
long distances. I'm thinking of switching to something much lighter,
but something I can get higher into the air.

>I think many (??) hams prefer to answer a strong CQ however they
>are more eager to respond if I call them directly in response to their

>rather than trying to CQ myself.

Right. If they hear a weak signal, they may think it's DX, but then
get disappointed that it's really not. My plan is to listen for
someone who is obviously a novice or tech+ sending slow, and then
respond to that.

>Also, I've found the 7100-7150KHz subband is terrible for me at night.
>I've only had one contact in the evening mainly due to the
>international shortwave broadcasters all over the band. I think my 3W

Too bad our slice of 40 meters gets clobbered by sw broadcasts. I've
noticed that listening to real QSO's really does improve one's CW
skills. Once I can get 13 wpm, I'll enjoy the relative tranquility
below 7100 kHz.

Fired up the NCX-3 and listened to 3950 for the first time in
three Months last night. Looks like nothing has changed to me.
The guy in N.Mex acting the part of the cheerleader to all the
other assorted fruitkakes out west, and in particular, in Southern
Indiana, who was repeating everything N. Mex said in a monolog
of obvious mental or chemical induced psychic imbalance(s).
What was curious was that the station in Maryland seemed to
be rather much on the offensive last night. This was quite a
suprise as his style is usually quite laid back. I hope he goes
back to his usual laid back style, as this seems to drive Indiana
nutzo. Remember that fruitkakes like Indiana love company and
are quite lonely if they are the only ones "on the stage" acting the fool.

Oh well.

On a warm summer's evening, in my mobile bound for nowhere, I met up with an old fart, we were both too tired to speak. I heard him CQing, not caring what he was doing, in the middle of the DX window right on 7 5. So we took turns a sending, out the window in the darkness, the boredom over took me, and I began to sleep.

He muttered son I made a life outta jamming other stations, messing up their contacts until it made them cry, and if ya dont mind me saying, I can see your outta greenstamps, if your gonna play the game boy you'd better learn to play it right.

You gotta know when to hold them, know when to fold them, know when to walk away, know when to run. Hams never count their money at the flea market table there'll be time enough for hamming when the dickerings done.

He asked me for a QSL and I filled out my last card. Then he bummed a roll of wire, and asked me for the time. Then he started moaning that his bladder size was growing, it must've been the whiskey he drank earlier that night.

You gotta know when to hold them, know when to fold them, know when to walk away, know when to run. Hams never amount to more than crotchity old geezers,. divorced contesters and men who leave their wives, yes there are few, who do make the exception, but as for most they lead dorky lives.

Then his mic got deathly quiet, and his voice lost all expression, I hit the mobile's brakes and stopped at the light. And the interference ended and somewhere in the ether the jammer he broke even, and in his final tones I found an 80 year old creep.

You gotta know when to hold them, know when to fold them, know when to walk away, know when to run. Hams never flash their wallet at the flea market table there'll be time enough for didahing when the dickerings done.

Oh you mean all his bald face lies about me? And MANY others here? And BTW
what "ILLEAGAL Communications" was that exactly? Were you there? Did you
hear this alleged traffic? Also, do you know of ANY NET that makes its
members fill out a "past criminal record history form"? I seriously doubt
it. You want to talk about "Illegal Comunications"? How about the BARF/
Stumpjumper jamming of legal amateur radio communications. When you get a
license then your opinion will mean something. When the nets go, so does
ham radio.

Do you realize that you're posting this crap on a wedding newsgroup? I
don't know about anyone else, but this is not the kind of thing I was
looking for when I started going through the ads. Could you maybe take
alt.wedding off your newsgroup listing? Thanks

Well I got burned by old porkbut twice. I have one of those filters and
it works somewhat on the lower bands, I still get into the phone and
knok myself off line sometimes but on the higher bands I knock my self
off everytime. I did ask for my money back for which he said in the
begining that I could have my money back. When I went to get my money
back he said I had all these problems with my radio and ever since I did
that my audio was never right. HMMMM He has been the only one to

complain and he didn't complain untill I had asked for my money back.
The all his suck boys started in on me about the so called audio problem
that didn't exsit. You know they do that cause they are afraid of him.
Well he got me on a amp I let that slide till he kept raggin me about
that. So I thought that I would let the world know. Porkbut is a
theif.You burn me once its your fault, you burn me twice its mine.

6627. Info on K5WMS Centennial 80M xceiver kit...

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-21 00:00:00 UTC
From: Randy and Cara Randall <crrandal@seidata.com>
Message-ID: <36F58C74.61F11694@seidata.com>
Source record: 147585

Looking for anyone who has built this radio kit or
has seen a review or has any info on it. What is the
performance like? Is it a good rig or a piece of junk?
I have looked on the web for info and could find
no reference about this kit at all. I feel the need to
build something and this could be a neat project
for me and useful too.

Thanks,
Randy KB8ASO Milan, In

80 Meter Centennial SSB Transceiver
By Paul Daulton K5WMS

Is that really a fair assessment? If there's been no enforcement of
the rule against linears in the last 10 years, and if linears are
openly traded on the internet, then it seems the comparison should be
of the owner of the housecat (rule enforcer). In other words, if you
never swatted your cats and CBers routinely met enforcement of the
rules, would that make your cats stupid? or simply living by the rules
as they see them applied?

Yeah, but we can't live with people getting their cars towed because there
was no place on the grounds to park and they were stupid enough to block up
a driveway or fire hydrant, the cruddy van service to the hotel where the
meetings are at, lack of space to expand either the inside or outside
exhibits and sales areas..etc.

i want to see a better fest - one where you have the time to browse the flea
markets and meet with people, and all that.

we can't do that at the auditorium...i hope they do make the move to the
convention center. i think it's the long term solution.

Certainly, it's been done before.

Such as with satellites and packet radio and the APRS evangelists over the years.

Should also be meetings or lunches for speciality groups - DXers, traffic handlers, etc.

If there was a way to have knowledgeable folks put on a good demo and take questions from the floor and such, i think you could bring in groups of people to a particular sub-hobby inside of amateur radio as well as expand the depth of knowledge in the service as a whole.

So many shows have dropped to just being another flea market that people don't realize what might be done. (And i kinda find it funny that after folks have labored so hard to make sure everyone knows about such an event, they get upset that the revenue folks show up with the sales tax forms...)

at one time that was also the case in amateur radio -- you had to get a call
for every station location.

However, at some point in the past, things like secondary and club licenses
were pulled and the call you used was the call you were assigned for your
home station. this is probably where the operators started thinking of calls
= name...

6640. NCI makes Ex Parte Presentation to FCC on "Restructuring," March 19th, 1999

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-21 00:00:00 UTC
From: "Carl R. Stevenson" <wa6vse@fast.net>

```
-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

On Friday, March 19th, 1999, NCI made an "Ex Parte Presentation"
to staff of the Wireless Telecomunications Bureau at the FCC's
headquarters in Washington, DC, to present our views on what
should come out of the "restructuring" of the Commission's Rules
regarding the Amateur Radio Service.

A copy of the presentation materials and a "stamped-in" copy
of the notice letter which was filed with the Commission's
Secretary are posted (in .pdf format) on NCI's web site at:

http://www.nocode.org (first item on the "Articles" page)

I guess this kind of blows MD's assertion of last week to the effect
that "Only the ARRL, 'THE' national organization merits the
Commission's attention and can 'have an audience' for their views to
be heard." (MD's comments did *not* prompt NCI's meeting with
the FCC, it had been scheduled several weeks in advance of his
comment and would have occurred sooner, had it not been for the
disruption of the FCC's recent move to new quarters.)

p.s. There's also a nice pic of NCI's two "men in black"
in front of FCC HQ, just to show we really were there :-)

Tracy, I get the feeling you are one of those creeps who transmits "LID
LID UP UP UP" on a DX station's frequency when operating split thereby making
him unreadable by domestic stations through your QRM.

Ignore abusers. They seek an audience. You acknowledge them or make a
point of making yourself the self-assigned cop, you are no better than they
are.

6651. Re: Antenna height ANSWER

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-21 00:00:00 UTC
From: Darrel Emerson <74010.2230@compuserve.com>
Message-ID: <36F517B7.6A85@compuserve.com>
Source record: 147627
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I think Paul's calculation wasn't quite right. The formula
(Range to Horizon) = 1.4 * sqrt (height in feet)
wasn't quite used in the correct context. Paul's sum calculated the
theoretical range to horizon for an antenna at just 5 ft height. If it
were
already above the ground, and just raised ANOTHER 5 feet, the INCREASE
in range is different. Note also that even in the ideal case, the range
calculated this way for your antenna has to be added to the range
calculated from the same formula for the other station.

e.g. if the antenna height is now 15 feet, the theoretical range to
horizon is about 1.4*sqrt(15) or 5.4 miles.
If the antenna height is now increased by 5 feet to 20 feet, the
theoretical line of sight to horizon becomes about 1.4*sqrt(20), or 6.3
miles,
an increase of 0.9 miles.

If the height were originally 30 feet, increasing that to 35 feet
would
change the theoretical line of sight to horizon from 7.7 miles to 8.3,
an increase of 0.8 miles. So, the higher the antenna is to start off
with, the less difference adding an additional 5 feet will make.

However, all the above is too theoretical; the range equation only
gives a rough guide, ignoring the local topology, tropospheric
propagation, diffraction and so on. In practice, raising the VHF/UHF
antenna 5 feet might allow it to clear a local obstruction, so making
quite a significant difference, but it just depends on the local
conditions.

Name of book is:

"Why I do not buy anything used I have not seen and tested"

Even swap meets are hazardous. So I buy used only from people I know --
else I buy new (and sometimes get lemons and hassles that way, too!).

Thanks for reading. I have too many radios and accessories I don't use or need so I have the following for sale or trade:

Narco HT-870 Airband portable. Very good condition. Probably will need new battery. $200 obo

Saber Smart Charger. Excellent Condition. $100 obo

MX Series Convertacom with speaker and mic. Good condition. $40 obo

Uniden Force rapid charger. Make offer.

HT200 on 147.15 with DC charging cup. Two batteries. Very good condition. $75

Vada Systems Alpha-Tel III, reverse auto patch. Good for business use. Can be used with standard, KSU or PBX system. With manual. $75 obo

I will say this the past is the past. Water under the bridge.I think
once the boy works to get his ticket he will value the radio more. I
hope so anyway. I try to look for best in people. Your right his past
actions were not very hopeful. Some people seem to get tickets and still
have no respect for the radio. You and I both know who they are. I hope
that Riley weeds these fools out. I think you understand what I mean by
respect. Just because a person has respect for radio dosn't mean one
can't have fun with it.

>??? AB7RS

he meant that Y2K will start in New Zealand, Australia, Guam 17 hours
before it hits the eastern US. The White House has announced that they
are installing new direct phone lines into capitals in countries in
each time zone so they can monitor Y2K as it approaches the USA.

It might be interesting if there were several Ham Y2K nets also so
hams in each time zone could logon [on each major band] and comment on
what was happening in their zone.

I miss seeing CBRambo's comments on this Newsgroup. I think he was one of the best posters to this NG. He said some stuff that was hard-hitting. Alot of people i know did'nt like him because of his stance against the Intercon Net, but so what? I don't like Intercon Either! Anyone who supports a net, which provided ILLEAGAL Communications to the Jim Jones camp, should think about it. That net has a member who is serving time for child molestation! what kind of net on Amatuer Radio would do such a thing??? Oh well, let it be said, Someone will take Rambo's place, and it would have better that CBRambo have stayed than the person who takes his place is done with you!!!

SWL-RAMBO!!!!

Good day,
I am trying (in my spare time) to wire an Alnico ems14 desk top mic for a Yaesu ft-840. As I don't have much spare time I am having difficulty in figuring out where what goes, (I only get at it about 10 mins. a week). If anyone could help me it would be appreciated very much. You can e-mail me direct at va3hie@eagle.ca

Once again thank you,

Alinco DJ160T for auction on eBay. Well-used, has some wear and
scratches, but works great! Needs new battery. No box, book, or vinyl
case. Includes wall charger and duck antenna.
Great first radio for the new Tech!
Follow this URL for full description and to bid:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=81074435
Opening bid is $19.95; no reserve!

Thanks and good luck,
Glen KB1CRN

> I guess you are used to a parade of operators using the same call sign.
> in the LMR business. Not so in amateyur radio. You, as a guest operator in
> another hams shack, should identify with their call stroke your call.

No. Read 97.119(e) Appending my call to another when I am a designated control operator of another ham's station is only required if my operating privileges exceed his.

97.119(e) "When the *OPERATOR LICENSE* class held by the control operator exceeds that of the *STATION LICENSEE*, an indicator consisting of the call sign assigned to the control operator's *STATION* must be inlcuded after the call sign" (My emphasis)

This is only an issue if you are actually operating outside the station licensee's operating privileges. The format would be to use the station's call stroke my station call. 97.119 is full of referal to call signs as being assigned to stations.

And yes I am used to a "parade of operators" using the same call sign in the LMR business. But I am also used to a "parade of operators" using the same amateur station call sign at club stations, special events, field day, etc. The only difference between amateur and LMR is that amateurs are required to have an operator license in addition to the station license.

Jumping to conclusions here. The address associated with my license is a current mailing address. It's not time for me to do anything, thank you - I am sure that your reminder was sincere.

Regards

I really don't know, but at a guess I'd say it depends on the mood of the cops
that pulled you over. "Ignorance of the law is no excuse" and all that.

Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html
or write directly to:
info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact

dtolassi@us.ibm.com
File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr.

Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++FEDERAL VIOLATIONS
Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:rlee@fcc.gov Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

6693. Re: CB radio linears amps

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-21 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <fheJ2.119$zz1.284@news5.ispnews.com>
Source record: 147669

Learning requires some minimal degree of intelligence.

For example, my housecats have learned not to climb on the furniture -- they get whacked with a rolled up newspaper if they do so they don't. Took them one week to learn that. Took them a couple of days to learn to use a litter box.

If a CB'er can't learn, in ten years, not to use a linear what does that tell you about his intelligence compared to a housecat?

SB DX @ WW $OPDX.401
Ohio/Penn DX Bulletin No. 401

The Ohio/Penn DX PacketCluster
DX Bulletin No. 401
BID: $OPDX.401
March 22, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1WLV, WA1ECA, AB2E, KP2BH, K4PC, K7AR, N8RFK, K8YSR, KE9KD & DX Central, W0YG, DJ5AV & DX News Letter, G4BUE & DX News Sheet, G0RCI, G0TSM, LA0CX, OK1YM, ON4BAM, PY1KS, SV2CWY, UN5PR, VE2SEI, VK5FV, VO1HE, YC0LOW, YU7ADY, ZP5AZL, ARRL Letter and Takashi Sawaguchi for the following DX information.

SPECIAL NOTE FROM EDITOR. There may not be a bulletin next week due to the fact that my wife is sending me to Las Vegas for a few days for my birthday so I can visit my father..... FOR REAL... What a great gal, hey! Anyway, if possible, send your DX info before March 25th, and I will try to put one together before I leave.... 73 de Tedd KB8NW (Editor)

3A, MONACO. The "DX News Sheet" reports that Luc/I1YRL and John/IK1SLP will be active again March 27-29th, as 3A/I1YRL (CW) and 3A/IK1SLP (SSB). Activity will be on all bands. QSL both via I1YRL.
Also, look for Henry, HB9APJ, to be active April 7-19th as 3A/HB9APJ His activity will be mainly CW on 30-10 meters. QSL via his home callsign.

8A, INDONESIA. Jo, YC0LOW, informed OPDX to look for 8A0J (Eight Alpha Zero Juliet) to participate in CQ WPX Contest on all bands as a Single Transmitter/Multi Op station. His QSL Manager is Taufan, YB0AI.

8P, BARBADOS. Look for Dean, 8P6SH, to be active as 8P2K during the CQ WPX SSB Contest and all other major contests until December 31, 2000. QSL via KU9C.

ATTENTION CONTESTERS! According to "The ARRL Letter (Vol. 18, No. 12, March 19, 1999)" the following was reported: "The new Canadian Territory of Nunavut, VY0, comes into effect on April 1, 1999. To reflect this new addition, Nunavut will become a separate multiplier in the two RAC Contests commencing with the RAC Canada Day Contest on July 1, 1999. --RAC"

C5, THE GAMBIA. Franky, ON4CEL, received the callsign C56EL and has been quite active on 40/15/12/10 meters CW. You just have a few more days to work Franky as C56EL (goes QRT on March 25th). Franky states for NA to look during their greyline time on 30/40/80 meters. QSL via ON4CEL, via the bureau or direct only to the following address: Franky Beuselinck, Oostmolenstraat 95, 9880 Aalter, Belgium.

C9, MOZAMBIQUE. Reinhard, DL6DQW, will once again be active from Benguera Island, March 26-29th, as C91RF/P. Activity will be on all bands CW/SSB using a IC-706MKII and wire antennas. QSL via the bureau or direct to his home callsign.

CY9CWI, ST. PAUL ISLAND. Fred, VE2SEI, reports that the original CY9CWI DXpedition announcement contained several errors and they would like to have the announcement republished. Look for the West Island ARC of Montreal from July 21-28th. Operation from this DXCC country will be on 160-6 meters as conditions permit. Operations will be on or near: 1830, 3505, 3780, 3860, 7005, 7065, 7230, 10105, 14010, 14265, 18080, 18125, 21010, 21305, 24935, 28010, 28395 and 50130 kHz. The team will be an entry in the 1999 IOTA Contest (July 24-25th) and will make special efforts to work Asians on 10-15 meters, Europeans on 80-160 meters, and Canadians everywhere! Operators will be Helen/VE2YAK (YL Op), Fred/VE2SEI, Al/VO1NO/VE1, Reg/VE2AYU, Bill/VE1MR, Dragan/VE2ZIV, Lowell/VY2OX, and J-F (Jeff)/VE2TBH. The following CY9 references were provided: CQ zone 05, ITU Zone 09, IOTA NA-094, Can. Is. NS-002, N. Lat. 47.33 degs., W. Long. 60.16 degs. Direct your comments and questions to: Fred Archibald VE2SEI, 130 Embleton Crescent, Pointe Claire, QC, H9R 3N2 Canada or via his E-mail address: archibal@pubnix.net
QSL via VE2CWI West Island ARC, Box 884, Dorval, Quebec, H9R 4Z6 CANADA.

DXCC FAQ #4. All OPDX InterNet Subscribers will receive a few extra bulletins this week. One contains Bill Moore, NC1L, DXCC FAQ #4.

DXCC YEARBOOK. Reports say that Bill Moore, NC1L, stated that they should be in the mail soon (April 1st).

E4, PALESTINE. David, E41/OK1DTP, continues to be active especially on 80 and 12 meters. Look for him to be active in the upcoming CQ WPX SSB Contest. Reports indicate that David will be active until December 31st. David was recently joined by his father Jirka, OK1TD, and they installed a HF tri-band beam and 160 meters dipole. QSL via OK1TD, Jiri Lunak, U Sporky 185, CZ-470 01 Ceska Lipa, Czech Republic.

HS, THAILAND. Look for Charlie, K4VUD, to be active as HS0ZCW now through April 5th, and again between May 18th and June 2nd. No other details were provided. QSL via K4VUD.

IOTA NEWS.....
EU-038. Maurice, ON4BAM, will be active from the island of Ameland (Waddeneilanden), from May 12-15th, as PA/ON4BAM (/M). This is a family trip that includes playing radio (not a 24 hour operation). He will be active while driving (not too much.. only small island), evenings and in between sightseeing

He will be using a TS-50S (150W), Outbacker Perth while mobile and wire (80m dipole or 12m helically wound wire on a FTT, Fiberglass Telescopic Tower). Propagation permitting, he will favor 12 and 17 meter bands. If the bands are bad, Maurice will be on 20 meter (14.250-270). QSL via homecall (CBA or Bureau).

EU-107. The Grantham Amateur Radio Club will activate Ile Aux Moines, one of the Sept Iles, from June 26-30th. The callsign will be F/G0GRC. They are limited to daylight hours and battery power as the isles are a bird sanctuary. QSL via G0RCI, Alan Gibson, 1 Oakleigh RD, Grantham, NG31 7NN England. All QSOs will be confirmed. After 1 month, any remaining cards will be sent via bureau.

EU-163. The radio club HERTZ will organize an DXpedition to the island of St. Nicolas, April 15-25th. The callsigns to be used are YU7ADY/P and possibly, 4N9W. Activity will be on 80/40/20/15/10 meters. QSL via Radio Club "Hertz", P.O.Box 47, 24430 Ada, Yugoslavi.

OJ0, MARKET REEF. Look for OH0RJ, LA1SJA, LA3KIA and LA0CX, who will be active from the lighthouse around the last weekend of June. The lighthouse has been booked and transportation has been arranged. Their main mode will be CW, on 160-6 meters with an emphasis on 12 meters. The main station will be running on a 24-hours-basis, one more station as often as possible. Total time of operation is expected to be 96 hours. Callsigns will be OJ0/ with their home callsign. QSL via homecalls.

LO, ARGENTINA. Daniel, LU1DK, reports to look for the station LO0D to be using this new prefix for the next 5 years during contests. QSL via F6FNU.

NEW PREFIXES FOR THE "CQ WW WPX CONTEST". Chris/SV2CWY and Savas/SV2AEL, will operate with the new following prefixes for the CQ WPX Contest only during the last weekend this March. Chris/SV2CWY will us the callsign J4Z, probably the first time a 3 letter callsign is used in Greece. QSL ONLY via: PO BOX 40130, Thessaloniki 56000 Greece. Savas/SV2AEL will use the callsign SW2A. QSL ONLY via: PO BOX 22013, Thessaloniki 55310, Greece. These two callsign will not be accepted via the SV QSL Bureau.

NP3, PUERTO RICO. The NP3X team will be in the CQ WPX Contest after some last minute preparation. They will be in the contest as a Multi/Multi entry. The team will be operating from the KP3P contest station. The list of operators will be: WP3A/Jim, WP4NHM/Rafael, WP3C/Al, W4OV/Bruce, WD4JNS/Julio, W4DN/David and KP2BH/Jimmy.

P4, ARBUA. NODXA Member Bob, K8BL, will be operating from here from March 22-26th. His equipment is an IC735 and MFJ portable antenna. Look for him 15 kHz above the band edge. Callsign is currently unknown. QSL via K8BL.

PACIFIC NORTHWEST DX CONVENTION. The Willamette Valley DX Club is pleased to announce the annual Pacific Northwest DX Convention is to be held July

30-31th and August 1st, at the Monarch Hotel in Portland, OR. For more info about the club, and to print out a registration flyer for the convention, visit the club's Website at: http://www.qsl.net/wvdxc

PW, BRAZIL. Alex, PY1KS, will be active in the CQ WPX SSB and CW Contest as PW1S. His entry will be All Bands Low Power (ABLP). QSL via Bureau or direct to: P.O.Box 18123, Rio de Janeiro-RJ, 20722-970 (GG87ic), Brazil.

PY0F, FERNANDO DE NORONHA. Just a quick reminder! By the time you read this, Peter, PY5CC, should be active as PY0FF on all bands until March 29th. QSL via JA1VOK.

QSL INFO AND NEWS.....
QSL J3/M0BJL direct to his address: Shaun Jarvis, PO Box 21, Hythe, Southampton, SO45 1UW, UK. Shaun says that via the bureau is fine if you want to wait a while. This operation was totally unplanned as it was his honeymoon!. He mentioned to one of the hotel staff that he was interested in Amateur Radio and was put in touch with another member of staff who held a J3 call. When Shaun was offered the loan of a TS-850 and a fullsize G5RV he said he couldn`t really refuse.

If you were lucky to work Eddie, N1WLV/DU1, on 6 meters over the past weekend, QSL via DY1LVA, EDUARDO VICTOR J. VALDEZ, ESQ, P.O. BOX 169, U.P. DILIMAN POST OFFICE, 1144 QUEZON CITY, PHILIPPINES.

Erik Sjolund, SM0AGD, reports one U.S. green stamp is NOT enough to QSL to Sweden.

QSLs for ZF2NT go via N4YBF. However, Chris, K4PC, 4-land's QSL Sorter (for W4, K4, N4 "Y"), reports that he has received many QSLs for this call, but unfortunately N4YBF does not keep bureau SASEs on file with him. Chris has sent him several requests to supply him with SASEs but he has not received a response to the requests. Chris suggests that anyone wanting a QSL should send their QSLs DIRECT to N4YBF and not through the bureau.

HK3JJH/0M QSL Route. Both the following addresses are acceptable:
Pedro J Allina, Box 81119, Bogota, COLOMBIA
Pedro J Allina, Apartado Aereo 81119, Santafe de Bogota, D.C., COLOMBIA

ZA5G QSL ROUTE. Frank, WA1ECA, reports that he does not manage this station. The only ZA station that he has ever managed was ZA5B (Gene Neill) who is no longer there. QSL ZA5G direct only.

Frank, WA1ECA, reports that he will no longer accept any QSL cards for 5X1F and 5X1C. Sam, 5X1F, unfortunately became a "Silent Key" after a long bout with cancer before Franl had a chance to get his logs. The only log page ever received from him was August 22, 1995. Mario, 5X1C, has not sent Frank logs since October 1995. Any card requests that are on hand will be returned if it is a direct request and has return postage. Bureau cards will be discarded.

VK9XX/YY QSL CARD STATUS. All QSL cards received direct have now been answered. "The backlog is ZERO!", states Charlie, W0YG. However, Charlie has noticed that he has received some envelopes with nothing inside indicating his mail is being opened somewhere in transit. He states, "So far this has happened twice with letters mailed from Japan. This has been reported to the U.S. Mail folks but they express doubt if anything can be done IF the problem is out of their jurisdiction."

VE6TK is listed in some publications as the QSL Manager for Bill, 3D2DI. VE6TK is no longer Bill's QSL Manager, and, in fact, the call has now been re-allocated. The current owner of the call has been receiving cards meant for Bill. The correct and only address for 3D2DI is: W.J. Smith, PO Box 184, Suva, Fiji.

SPECIAL EVENT. The Ikeda citizen's ARC (JH3YKV) have been issued the special callsign, 8J3IKD, to commemorate the 60th anniversary of Ikeda City, Osaka Japan. Their activity will be on all bands, all modes up to 5.6 GHz. Operations will be from April 10-30th and their licence is only good for 20 DAYS! During the weekdays, they will operate during their spare time in Ikeda City and during the weekends from Mt. Satsuki. Any JARL member is welcome to operate. For details, contact JE3LGJ via E-mail at: je3lgj@jarl.com
QSLs will be issued one way through the bureau.

SPECIAL EVENT. April 14th marks the 40th anniversary of the Incorporation of the Society of Newfoundland Radio Amateurs (SONRA). To commemorate this event, the SONRA DX Group will be operating as VO1AA for this special event on April 14th, from 0000-2230z from their club station. Activity will be CW/SSB on 160-10 meters and also 2 meters. There will be a certificate available to any eligible contact upon receipt of an SASE. To receive your certificate, please send your QSL card with a self addressed envelope big enough to take an unfolded 8.5x11 inch sheet of paper (unless you want it folded) and sufficient return postage to:
SONRA DX Group -or- Paul J. Piercey VO1HE
Box 23099 40 Mt. Cashel Rd.
St. John's, NF A1B 4J9 St. John's, NF A1A 1X7
Canada Canada

SU, EGYPT. Jaro, OM3TZZ, who has been a resident in Giza, Cairo, for some time now, has finally received a callsign. Begin look for SU9ZZ to be active on the bands. He was spotted this past week and weekend on 20/15/10 meters CW. Check between 1530 and 1730 on 15/10 meters and around 0500z on 20 meters. QSL via the bureau or direct to OM3TZZ: Jaroslav Jamrich, Gejzu Dusika 43, Trnava 917 08, Slovak Republic.

SV, GREECE. Olda, OK1YM, (currently now in SV1-land) reports to please look for SV1DKR to participate in the CQ WPX SSB Contest as a Multi/Multi entry.

UP5, KAZAKHSTAN. Romeo, UN5PR, informs OPDX that he will be in the CQ WPX SSB Contest as UP5P and as a Single Operator-All Bands entry. QSL via direct to his regular callsign UN5PR: Romeo Y. Loparev, P.O.Box 73, Temirtau, 472300, Rep. of Kazakhstan. The QSL Bureau in Kazakhstan is

not working.

V2, ANTIGUA & BARBUDA. Brian/N3OC/V26OC and Darrell/AB2E/V26E will be activating the V26B supersite as a multisingle entry in the CQ WPX CW Contest, May 29-30th. They will be on before and after the contest with their individual callsign from May 26-31st. QSL V26OC via N3OC and any V26E operation via AB2E. Darrell reports that he is waiting for another 2000 V26E QSLs from the printer and hopes to have all the bureau cards out before May for the past operations.

XF4, REVILLAGIGEDO. The "DX News Letter" reports that Hector, XE1BEF, will be active as XF4BEF from Socorro Island (NA-030) between March 17th and April 2nd. However, no QSNs have been reported yet. Activity is to be active on CW/SSB/RTTY and on 160-6 meters. QSL via XE1BEF.

ZP40, PARAGUAY. Tom, ZP5AZL, informs OPDX that he will be active in the CQ WPX SSB Contest next weekend using the special callsign and prefix ZP40Z. This is a brand new prefix for the collectors. He will be active as a High Power/All Band entry. QSL route is only via W3HNK, not to his home address.

Hello All,

We are trying to put together a repeater system in
Southern California.
We are looking for plans to build 2 meter
duplexer\cavities. Any info will be great!!!
Thanks & 73,

Mike Green KQ6MU

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

Oh, horse poop. Anything said over phone can surely be sent via Morse!
In fact, discussing PDEs using Morse would eliminate much of the ambiguity
which creeps in during a verbal conversation.

Hi

I'm looking for a new two meter VHF radio and would therefor like to hear about your experience (or comments) with any of the following radios.

Yaesu FT-3000
Icom IC-2100H
Yaesu FT-2500

What is good or what is bad?
Have you got any problems with any of the radios?

I look forward to hear from you,

I have heard illegal operations in the 10 meter band all the way from
28.000 thru 28.310, and they were not just truckers, but many U.S.
base stations. However, they are a minority, as most of the operations
I have heard are not from North America.

Regards

Reed

Wow
Lets all just move to China or Russia. Lets have the government
regulate everything. More regulation more taxes more work less pay. I
can't beleive you guys that cry for more regulation. Next thing I'll
hear is I got to buy body armmor for my kid to ride in the car.

Free speech is being able to poke fun at the government. Free speech is
the ablity to agree or disagree with the government. Free speech is
being able to tell untold truths about other people. Free speech isn't
the telling of lies to hurt other people. So many beleive this to so.

In Alaska, Massachusetts and Rhode Island it's illegal to use or possess helmet speakers. In some states you can only have one speaker. In others, helmet speakers are to be used only for communication devices.

I don't know how YOU associate and memorize stuff, but for me, the more
complete the association, the more complete the memorization. I would
do MUCH better associating the entire question with the entire correct
answer.

> This is done fairly simply, actually. One has only to block out the WRONG answers,

> he has seen several times previously in conjunction with the question.

And if one knows the correct answer to the question one has not learned?
This is different from remembering the single sentence about a voltmeter
measuring electric potential in the 1962 study and associating it with
the question and answer from the 1962 exam about the topic how? If you
know that a voltmeter measures volts, you have learned the concept.

> Actually, he can't miss, if he really wants the license. All he has to do is work
> with the question pools for the next test he intends to take, and it will come. The

Okay, let me understand -- "memorizing" 500+ questions and their correct
answers is not learning, but associating 26 letters with the
appropriate "right answers" of short and long sounds is learning? I
think that in both cases, the applicant has demonstrated that he or she
knows and has learned something.

> This is my complaint regarding the current testing scheme. The fault lies with the

> advanced subjects.

I think that the 1926 Novice test met that objective. One could even
believe that the much greater body of knowledge required for the current
test meets the objective in the 1990s. But no matter how you slice it, I
do not believe it has been dumbed down. I think the "smarting up"
thread describes it pretty accurately, at least as compared to the 1962
study guide and test. :-)

What better way is there to start off your morning except by drinking a cup of coffee using your very own CALLSIGN MUG. See at http://home.earthlink.net/~jawjabber
All mugs are made with quality control in mind. They are dishwasher and microwave safe and if after you receive your mug you are unsatisfied just send the mug back in its original shipping container and I will refund you the cost of the mug. See at http://home.earthlink.net/~jawjabber for details.
If you what to buy your personal callsign mug all you will have to do is send a check or money order for the amount of the mug plus $4.00 for shipping. Remember to send your callsign so I can place it on the mug.(The mug you see on my web sit is just a sample mug. Your callsign will be placed on the mug you order.) Please USA orders only. See at http://home.earthlink.net/~jawjabber
To see a picture of the Callsign Mug and to get the order forms please click on the link below.

Just how do you arrive at that number? What about the 4000+lb station wagon that my parents owned? How different was that vehicle? It got a whopping 10 miles to the gallon. What do you propose to replace them with (have to be able to carry 6 or more adults and/or tow 5000lbs or more)?

> The Sierra
> Club has declared SUVs to be an enemy of the environment and wants
> them more heavily regulated by the government.

Now there is a great group (of assholes)! They wanted to stop the Barstow (sp?) to Vegas off road race several years ago. They argued that it crossed an area containing desert tortoises. To prove their point, some members moved some tortoises. Scientists wondered how these tortoises appeared from nowhere since there were no signs of burrows etc. The tortoises all died because they are too stressed from being moved. The members then threw some twisted metal spikes onto the race course, and when they left, they left their protest signs behind. The Sierra club is nothing but a bunch of wankers.

Au contraire! You are much safer dealing with an ebay vendor than with any private seller! The ebay vendor has his/her reputation at stake, as you have the opportunity to leave feedback on the transaction for all to see forever. The occasional newsgroup/swaplist seller has no such motivation to make you happy with your purchase. As an ebay purchaser you have the opportunity to essentially blacklist the vendor by leaving negative feedback on them.

Less than straight forward? What seller in his right mind would NOT want to get the highest return for his goods? Fair value is set by the free market. Don't think everything is high priced on ebay----there are great deals there sometimes!! My experiences there as a buyer and seller have been much better than local or newsgroup purchases have been.

However, I do agree that proper etiquette dictates that the "FA" should always be used instead of "FS" on auction link ads. Auction link ads that are not properly headered even annoy ME!

Regards,

Tim VE7SEZ

I believe the officer can make you disconnect it but can't give you a
ticket. The same applies to an out of towner who rides without the
helmet because the states he/she is riding in does not have a mandatory
helmet law. If a cop notices an out of state plate and that person is
riding without a helmet, though the state in which the rider resides,
requires a helmet, the cop can make you wear the helmet or give you a
ticket. I heard this, don't know of any truth to it.

Hi BD,

I've used an FT-840 for about 5 months now and have really enjoyed it. I rate it an excellent, though not stellar, rig. If you're going to do CW, be sure to get the optional 500 Hz filter. Obviously, it's not a contester's rig, but for getting started it's hard to beat.

Spend some time or money on a decent antenna and you won't me disappointed.

> From what you are able to read, was it poosible for someone to memorize
> all the questions in the 50's LMs and pass the FCC test? Some people claim
> it was.

Here is the entire Novice chapter from the 1962 ARRL License manual. This is the body of knowledge required to pass the Novice exam. In most cases, the "concept" being taught was taught with a single sentence. I studied this material for about a week and handily passed the Novice exam. How much of a factor was "memorizing" in studying this material?

Compare this with the question pools published at http://www.arrl.org/arrlvec/pools.html. I looked closely at the Novice and believe that, with the exception of one general area, "memorizing" the correct answers imparts the concepts at least as well as the text in 1962, if not more so. I say "more so" because the number of questions in the pool teaches more than the single sentence or two in the 1962 material. (The one exception is the Ohms Law portion; there are only 3 calculations and it might be easier for some to memorize the correct answers so they don't have to learn the simple formula requiring 7-th grade algebra . . .)

How can we say, with a straight face, that testing has been "dumbed down?" The body of knowledge is, IMHO, about 10 X what was required in 1962. Yes, the questions and answers ARE public, but knowing the correct answer to those questions is at least as informative as the terse explanation of "concepts" in the 1962 study guide. We can, perhaps, rightfully discuss whether the Extra Class is easier than it was in 1962, but from my analysis of the 1962 study material and the content of the current pools, the current spate of newcomers is learning a LOT more than us old timers had to learn.

And, this is JUST the Novice pool. Most newcomers choose to enter as a Tech or Tech+. Under the restructuring, the HF *ENTRY LEVEL* license will be the General. If anyone wants to know why we are not seeing the newcomers to Amateur Radio, they can consider how much harder the entry level tests are, and will be, than was what considered adequate in 1962.

We can discuss whether the higher-class licenses are simpler than they were in 1962, but I don't think that many will conclude that the existing Nov/Tech pools are a dumbing-down of of what was required in

1962.

73,
Ed, W1RFI

CHAPTER 2

The Novice License

The Novice Class license offers an ideal way to get started in amateur radio -- reduced code speed and a simplified written examination. It grants a portion of amateur privileges on an "apprenticeship" basis for one year. The examination is available only by mail. This chapter explains the license in detail and contains sample questions for the written exam.

In an incentive to encourage a greater number of people to engage in the hobby of amateur radio, the Federal Communications Commission has established a Novice Class of license with greatly reduced requirements and only a few of the privileges available to amateurs. This class of license might well he termed an apprenticeship. It has a term of but one year, compared with the five-yea terms of other amateur licenses, and the objective is to give a newcomer a period of a year of actual on-the-air experience or training in amateur operation so that he may develop his skills toward one of the permanent classes of license more rapidly than he would by textbook study and audio-oscillator code practice.

The Novice Class license examination may now be taken only by mail, under the direct supervision of an amateur holding a General Class license or higher, or a commercial radiotelegraph license. This is true no matter where the applicant lives. Refer to the section "Examination Procedures " in Chapter 5 for details on the rules governing the routine for making application and obtaining a set of examination papers. Requirements for the Novice license are the passing of a code test in sending and receiving at the rate of 5 words per minute, and a written examination in the most elementary aspects of amateur regulations and theory.

The privileges which are currently available to the Novice licensee are:

3700 3750 kc. - telegraphy
7150-7200 kc. - telegraphy
21,100-21,250 kc. - telegraphy
145-147 MC. --telegraphy or voice

In addition, the transmitter used by a Novice licensee must be crystal-controlled, and may not have an input exceeding 75 watts. Of course, the Novice may operate portable or mobile on any of these frequencies.

The most important point concerning the Novice license is that it is valid for only one year and may not be renewed. Before the end of his

license term the Novice must qualify for one of the other grades of amateur licenses, or go off the air. He may try for a Technician Class or a General Class license (or Conditional Class, if eligible to take the mail examination). Whatever his choice, he must qualify for all requirements of the particular license class inasmuch as the Novice Class license, being obtained by mail, carries no credit toward a higher grade of license even where the examination elements are identical (such as the Technician 5 w.p.m. code test). He may not try for a class higher than those mentioned, of course, since experience as a Novice operator does not qualify for the service requirements for the Extra Class license.

Anyone who is a citizen of the United States may apply for the Novice, license, except a person who holds or ever has held an amateur license of any class. Thus a Novice not only is unable to renew his license at the end of his term, but he may not again apply for Novice privileges. If an applicant for Novice privileges feels that he can pass the standard written examination for amateur licenses but is unable to meet the 13 w.p.m. code requirement, he may simultaneously apply also for the Technician Class of license, taking the 5 w.p.m. code test, the elementary Novice written exam, and the standard written exam.

A Novice may operate any FCC-licensed amateur radio station, but only to the extent of the privileges available to the Novice and similarly available to the licensee of the station being operated. For example, when a Novice visits a station licensed to a General Class amateur, he may operate in only the Novice bands, using crystal control and with 75 watts input power or less. He uses his host's call sign exactly as issued, however. When a Novice operates a Technician's station, he may use only the 145-147 Mc band, since that is the only band common to both Novices and Technicians.

As stated, the written examination for the Novice license is quite simple. It consists of about 20 questions dealing with basic amateur regulations, and certain points of theory and technique. The questions are of the "multiple-choice" type, as explained in Chapter 1. There are no diagrams required. Following is a set of questions similar to those which are asked in the examination. If you are thoroughly able to answer each of these sample questions, you will have no difficulty in passing the written exam. However, in any event we recommend additional study of at least the technical material in How to Become a Radio Amateur and preferably of the introductory chapters of The Radio Amateur's Handbook ($3.50), both available postpaid from the ARRL, West Hartford 7, Conn.

The receiving code test for the Novice Class license consists of 25 five-letter words, mostly common ones. No punctuation marks or numerals are included. To pass, the applicant must copy at least 25 consecutive letters accurately. In the sending test, numerals and simple punctuation marks may be included.

QUESTIONS:

1. What is the maximum input power permitted to the final stage of the transmitter in a station licensed to the holder of a Novice Class license or operated by such an operator?

The maximum input power permitted a Novice is 75 watts.

2. What is the maximum penalty for a violation of the rules and regulations of the Federal Communications Commission?

A fine of up to $500 for each day during which the offense occurs, suspension of operator license, and revocation of station license.

3. On what frequency bands may the holder of a Novice Class license operate an amateur radio station?

3700-3750 kc.
7150-7200 kc.
21,100-21,250 kc.
145-147 MC.

4. On what frequency bands may the holder of a Novice Class license operate an amateur radiotelephone station?

145-147 MC.

5. What is the log of an amateur station, and what information is required to be entered therein? How long must it be preserved ?

The log of an amateur station is the written record of transmissions. The log must show:
1) the date and time of transmission
2) the signature of each licensed operator operating the equipment and the name of any person not holding a license who speaks over a radiotelephone transmitter directly or by recording, or operates a teleprinter keyboard
3) call of the station called
4) the input power to the transmitter
5) the frequency band used
6) the type of emission used
7) the location of the station at the time of transmission
8) the message traffic handled

Information such as the input power, frequency band, type of emission, location of station, need be entered only once provided the conditions are not changed. Similarly, one entry of the date need not be repeated for other transmissions made on that date. If the station is mobile, the approximate geographic location can be indicated in the log.

The log of an amateur station must be preserved for at least one year following the last date of entry. Similarly, any message traffic handled must be kept on file for at least one year.

6. What is the term of an amateur Novice Class license? Under what conditions may this license be renewed?

The term of an amateur Novice Class license is one year. It may not be renewed under any conditions.

7. What are the rules and regulations regarding the transmission of improper language, false signals, or malicious interference?

The transmission of obscene, indecent or profane language, or of false or deceptive signals or call letters, or of malicious interference is expressly prohibited and there are heavy penalties for violation.

8. What are the rules and regulations regarding purity and stability of emissions?

Below 144 megacycles, spurious radiations must be reduced in accordance with good engineering practice, and must not cause interference to near-by receivers of good engineering design not tuned to the transmitter. Voice modulation of a transmitter must not cause spurious emissions; the maximum modulation percentage is 100%. Simultaneous frequency modulation and amplitude modulation is not permitted. The frequency of the signal transmitted must be as constant as the state of the art permits.

9. What method of frequency control is required to be used in the transmitter of a station licensed to the holder of a Novice Class license?

The frequency must be crystal-controlled.

10. What are the rules and regulations regarding the measurement of the frequencies of the emissions of an amateur radio station?

Regular measurement of the frequency of the transmitter is required. This measurement must be by means independent of the means used to control the transmitting frequency and must be of sufficient accuracy to ensure operation within the frequency band used.

11. Who may be permitted to operate the transmitter of an amateur radio station licensed to the holder of a Novice Class license?

Any amateur radio operator (though a Technician may operate a Novice's station only in the band 145-147 Mc., since that is the only band the two classes have in common).

12. Under what circumstances may an amateur radio station be used by a person who does not hold a valid license?

A person not properly licensed may not operate an amateur station. However, he may speak over the microphone of an amateur radiotelephone station or use the keyboard of an amateur radio-teleprinter, provided a duly licensed operator is present to control the emissions.

13. What is the maximum permissible percentage of modulation of an amateur radiotelephone station?

One hundred per cent.

14. At what intervals must an amateur station be identified by the transmission of its call sign? May any transmission be made without identification of the station?

An amateur station must identify its call sign at the beginning and end of each transmission and at least every ten minutes if a single transmission lasts longer than ten minutes. No transmission by itself may be made without identification of the station, except that during a sequence of transmissions each less than three minutes long, the call sign needs to be given only once each ten minutes as well as at the beginning and end of the work.

15. Under what conditions is notice of portable or mobile operation required to be given, and to whom in each case?

Notice of intended portable operation, or mobile operation, must be given the FCC Engineer-in-Charge of the inspection district in which such portable or mobile operation is contemplated only when the operation is or is expected to be for a period longer than 48 hours.

16. What are the recognized abbreviations for: kilocycles, megacycles, Eastern Standard Time, Greenwich Mean Time, continuous wave, frequency modulation, amplitude modulation?

kilocycles - kc.
megacycles - MC.
Eastern Standard Time - EST
Greenwich Mean Time - GMT
continuous wave - C.W.
frequency modulation - f.m.
amplitude modulation - a.m.

17. What is the relationship between a fundamental frequency and its second harmonic; its third harmonic, etc.?

The second harmonic is twice the frequency of the fundamental, the third harmonic is three times the fundamental frequency, and so on. A harmonic is always related to its fundamental frequency by an integral multiplier; i.e., 2, 3, 4, 5, 6, etc.

18. What is the relationship between a cycle, a kilocycle, and a megacycle?

1 kilocycle = 1000 cycles
1 megacycle = 1000 kilocycles = 1,000,000 cycles

19. What instrument is used to measure: electrical potential; electrical current; electrical power; electrical energy?

Electrical potential is measured by a voltmeter.
Electrical current is measured by an ammeter, milliammeter, or microammeter.
Electrical power is measured by a wattmeter.
Electrical energy is measured by a watt-hour meter.

20. What is the purpose of: a modulator; an amplifier; a rectifier; a filter?

A modulator is used to vary the amplitude, frequency or phase of the output of a transmitter for the purpose of transmitting information. An amplifier is used to increase the amplitude, or power level, of a signal. A rectifier is used to change alternating current into pulsating direct, current. The purpose of a filter is to attenuate undesired frequencies while simultaneously passing, without appreciable attenuation, a desired band of frequencies and/or direct current. Examples: The power-supply "smoothing filter," which eliminates the alternating-current ripple from the output of a rectifier but permits direct current to flow with little or no attenuation; the "low-pass" filter, which attenuates all frequencies (such as harmonics of a transmitter) above a given frequency but passes all lower frequencies.

21. What is meant by: amplification; modulation; detection; attenuation?

Amplification is the process of increasing the amplitude, or power level, of a signal. Modulation is the process of varying the amplitude, frequency or phase of the radio-frequency output of a transmitter. Modulation is normally employed for the purpose of transmitting information. However, it may also occur inadvertently, as in the case of "hum" modulation of a signal resulting from ripple in the output of an insufficiently-filtered d.c. power supply. Detection or demodulation is the process of extracting the information contained in the modulation on a radio-frequency signal. Attenuation is a reduction in amplitude.

22. What is the purpose of: a radio-frequency choke; an audio-frequency choke; a filter choke?

The purpose of a radio-frequency choke is to oppose the flow of radio-frequency current while permitting direct current and audio frequencies to flow without appreciable opposition. The purpose of an audio-frequency choke is to oppose the flow of audio-frequency currents while permitting direct current to flow. The purpose of a filter choke is to aid in smoothing the direct-current output of a rectifier.

23. How is the actual power input to the tube or tubes supplying energy to the antenna of an amateur transmitter determined?

The input power is determined by measuring the direct-current plate voltage and the d.c. plate current to the tube or tubes in the final stage in the transmitter. The power input is equal to the plate voltage multiplied by the plate current in amperes. Example: Two tubes in the final stage of the transmitter take 50 milliamperes each, at a plate voltage of 500 volts. The total plate current is 2 X 50 = 100 milliamperes, or 0.1 ampere. The power input is therefore 500 X 0.1 = 50 watts.

24. Why are a rectifier and filter required in the plate power supply system of an amateur transmitter when operated from alternating current?

The amateur regulations require that an adequately-filtered plate supply be used on transmitters operating below 144 Mc. The rectifier is used to convert the alternating current into direct current. However, its d.c. output is pulsating, not constant, and the filter must be used to smooth out the pulsations so that the output is essentially "pure" -- that is free from pulsations or "ripple."

25. What is a frequency multiplier?

A frequency multiplier is a device that delivers output at an integral multiple (i.e., 2, 3, 4 times, etc.) of the applied frequency. The output of a frequency multiplier is consequently on a frequency that is a harmonic of the fundamental (applied) frequency.

26. What are the undesirable effects of overmodulation in radiotelephony?

Overmodulation results in the generation of spurious sidebands - that is, frequencies lying outside the band of frequencies or "channel" actually required for transmitting the information contained in the modulation. Those spurious frequencies, called "splatter," will interfere with communication on near-by channels and may even lie outside an amateur band. At close range they may also cause interference with broadcast reception.

27. What is meant by a "parasitic" oscillation?

A parasitic oscillation is one not essential to the operation of the equipment and usually occurring on a frequency considerably removed from the operating frequency.

28. What is the purpose of a "key-click filter" and when should it be used?

The purpose of a key-click filter is to reduce spurious radiation generally when keying a radiotelegraph transmitter. It should be used whenever required for suppressing such spurious radiations.

29. What is Ohm's Law?

Ohm's Law expresses the relationship between potential, current and resistance in any circuit.

It is stated as I = E / R where I = current in amperes, E = potential in volts and R = resistance in ohms. By simple algebra it is also E = I * R and R = E / I.

30. What precautions should be taken to avoid the danger of shock from high-voltage electrical circuits?

Such circuits in transmitters and receivers should not be exposed where the operator can inadvertently come in contact with them when the power is turned on. All work on equipment involving the possibility of contact with such circuits should be done only after the power has been turned off. All power-supply capacitors should have bleeder resistors connected

across them, to discharge the capacitors after the power has been turned off.

31. What is the relationship between the frequency and the wavelength of a radio wave if its velocity in space is 300,000,000 meters per second?

The frequency in cycles multiplied by the wavelength in meters is 300,000,000. Therefore, the wavelength is inversely proportional to the frequency; in other words, the longer the wavelength, the lower the frequency. The formula for calculating frequency (f) in cycles when the wavelength in meters is known is f = 3,000,000 / wavelength ; similarly, wavelength = 3,000,000 / f. Example: The wavelength of a signal whose frequency is 3700 kilocycles is 300,000,000 / 3,700,000 or 81.08 meters.

32. What symbol is used in the amateur rules to designate amplitude-modulated telegraphy without the use of modulating audio frequencies (on-off keying)?

Al. (The "A" indicates amplitude modulation, and the numeral "1" is used to indicate telegraphy by on-off keying).

33. What is the ruling regarding eligibility for reexamination?

An applicant who fails an operator examination may not take another examination for the same or higher privileges within 30 days (except that this does not apply to an examination for a General Class license following a mail examination for a Conditional, Novice or Technician Class license).

34. What factors are commonly responsible for harmonic radiation and what practical means can be used to detect and correct such condition?

The principal factors responsible for harmonic radiation are (1) improper operating conditions in the final amplifier, such as excessive grid bias and excessive drive, causing the tube or tubes to develop unnecessarily large harmonic output: (2) poor selectivity interstage tank circuits, resulting in excessive harmonic content in the excitation voltage applied to the final stage (3) inadequate selectivity in the final tank circuit because of too-low operating Q; and (4) insufficient selectivity in the coupling circuit between the final-amplifier tank circuit and the antenna, or omission of such a coupling circuit.

These defects can be corrected by (1) reducing grid bias and drive to the minimum necessary for reasonably efficient operation of the final tube or tubes; (2) using higher-Q interstage circuits, usually by increasing the ratio of capacitance to inductance or by decreasing the coupling to lighten the loading on the circuit; (3) adjusting the final tank inductance so that the tuning capacitor will be set for higher capacitance at the operating frequency: and (4) installing a tuned antenna-coupling or matching circuit between the transmitter and the transmission line or antenna.

The presence of harmonics in the output of a transmitter can be detected by the use of an absorption wavemeter, having a sensitive indicator, coupled to the final tank circuit or to the antenna coupling circuit, and successively tuned through the harmonics of the operating frequency. Alternatively, tests can be conducted with a nearby amateur station, with the cooperating amateur listening on the various harmonic frequencies while the transmitter is in operation. The receiving station should not be so close that the fundamental-frequency signal strength will be such as to overload the receiver and thus cause spurious harmonic responses in the receiver itself.

6765. QUESTION... TS830S WITH AMERITRON AL811H

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-22 00:00:00 UTC
From: Steve <sbynum@earthlink.net>
Message-ID: <7d5ngb$a25$1@oak.prod.itd.earthlink.net>
Source record: 147543

A few issues to bring up.....(answers preferred from users of both}
1. Does the relay in the TS 830S handle keying the Ameritron AL811H properly or is a outboard relay needed?

2. The AL811H amp comes stock wired for 110v....does it really work ok at 110v {i dont have 220v but could have it if really needed}.

3. What desk mic {with your experiences} do you recommend for the TS 830S for all around performance {Im considering the Shure 444d}. I want a desk mic that doesnt have too much bass to it but has some highs as well without it sounding too narrow.
Thanks for any input

If it is on all TV's then I first suspect the common elements, the amp etc.

The amps are real easy to overload. Is the amp powered up the coax by a power source near the tv, or is it powered locally in the attic? If you have two static lines crawling up the screen, you have a power line problem. That would go along with your "load related" dissapearence of the problem. My local convienence store sign burns out its bulbs every few months. HF and TV are severly affected until he changes the bulbs! Fish tank heaters have been known to do the same. "touch dimmer" lamps are a known problem as well.

6769. Re: ~Slinkiey Antenna Ideas Needed~

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-22 00:00:00 UTC
From: Rudi Wiedemann <wiedemann@home.com>
Message-ID: <91uJ2.21846$FZ5.6864@news.rdc1.sfba.home.com>
Source record: 147547

Slinkies can be thought of as "continuously loaded" antennas. For vertical operation, you can stretch 3-4 coils to work as tuned radials.

The rule of thumb on a "starting point" for slinky dipoles (BOTH legs):

Band 80m 40m 20m 15m 10m
# of Slinkies 4 2 1 1
1
Leg Length (ft) 15-22 8-11 7-8.5 9-14 7-9
Loading ends ends ends ends delta
Coil # Used all all 38-40 all
18&22

The tuning depends heavily on your loading method (balun or not) and the height off the electrical ground. For 15m and 10m, just clip the two feedline leads to the appropriate coil number on the SAME slinky for a "delta match". Tune for resonance by changing leg length (stretching or relaxing) by about 3-6 inches at a time.

Your best bet when experimenting is to string up at least 30 ft of cord or heavy monofilament, rig up a center "coil mount/separator" from PVC or similar, and then start tuning using a good antenna analyzer.

It also helps to use a 1:1 balun to load the coils. Otherwise you're coax becomes part of the radiator.

(Hope you didn't buy those new plastic slinkies. They're kind of tough to load up!)

Hi,
We're a club here in Morgan City, LA and we want to reinstate a 2 meter net that's been inactive for quite some time. I've delved thru several databases, but i am yet to see what I'm searching for.
I'm looking for a computer program i could use to type in a ham's callsign and receive info on him/her that i had filled in on his "first ever" check in. I know a gentleman that used to run a 2 meter net used such an animal, but i can't find anything. Any help is APPRCECIATED!

thanks and 73

If the interference changes when something in your house changes, I'd
borrow a battery-operated TV, connect it to your house TV system, and start
flipping circuit breakers until the interference went away. That would up
at least eliminate something in your home messing things up. Do you have
an antenna amplifier in your attic? Strong possiblilty it's oscillating,
maybe even causing interference to your neighbors.

Hi Steve

My TS-830S relay worked fine with a Heathkit SB-230 -- I suspect it
should work with the Ameritron -- but have no first hand knowledge of
same.

My 811A works OK on 110V -- not sure of the 811H but should work if you
throttle back on the drive.

My best mic with the TS-830S for hi notes was the Astatic D-104 --
still being sold. See URL:
http://www.ctiaudio.com/

Good Luck

actually, i seen on an info site that "ham" was actually a derogatory comment made oabout amateurs way back when it started. Used by commercial, marine, and so forth stations i.e. "that !%#$ ham is jamming your signal"

But would be that it is wrong. beats me

You complain about ham radio dying, you complain about how people talk on air. But yet i just subsribed to this newsgroup and if i didn't know about other hams who are much nicer and friendlier to talk to, I WOULD NEVER BECOME A HAM. This group is called rec. RADIO.AMATEUR.MISC which should be about ham radios and communication i would think. But all i see here for the most part is complaining about other people and you flaming each other.

IT IS A SHAME when people who have mutual hobby interest cannont come to some agreement. At least if you can't get along then why don't you just ignore each other so this group can contain some useful info without having to weed out all the crap of immature children.

Come on, guys. One way to slow down the incursion is to use the frequency with cw. You all remember that, I am sure. Some of you have legal limit rigs and cw pounding in on the trucker frequencies above 28.00 MHz should kind of complicate their transmissions. Use them or lose them.

Well friends. Dan asked how do you jam a news server? You do it the same way the world class jammers used to jam on 3901. Only here you try to do it by lodging complaints with a persons ISP.Interesting. As any old grunt knows tracers work both ways.Posting character assasination,foul language, encouraging unlawful acts(CBers on 10 Mtr) makes you not only a target indetified by your tracer, but standing in the open with no cover. I knew I was proud of my Great Grandfather for wining the meadal of honor while serving as a Sgt in the 3rd Iowa Cav in Georgia.I wonder if his enemy was so goofey. It is an honor to serve in the thin blue line that separates civilizatio P I G Pride Integrity and Guts

I have a GAP Voyager DX.

On 75 meters it is "adequate" but only barely.

On other bands (160, 40, 20) it is an air-cooled dummy load.

>

That would be true if it was not for the question pool., with the exact questions and their exact answers published in advance. The pools make it possible to memorize even the most vague word associations that match questions and their answers without the applicant ever needing to learn anything at all about the question's content.

This is done fairly simply, actually. One has only to block out the WRONG answers, the distractors, then read each question, then its answer. After repeating this process a number of times, it's almost automatic. See the question on the test, go directly to the correct answer. It will almost jump off the page since it is the one he has seen several times previously in conjunction with the question. All the others will be foreign, and only the answer he has seen several times before on conjunction with the question will be familiar, although NO knowledge whatever of question and answer content will be required to have been learned, or even memorized by the applicant.

Actually, he can't miss, if he really wants the license. All he has to do is work with the question pools for the next test he intends to take, and it will come. The only thing presently holding anyone back from the Extra class license using this method is the Morse code test. It's telling that so many of the hams posting here against code testing refuse to acknowledge any of this.

This is my complaint regarding the current testing scheme. The fault lies with the mechanics of testing. I have no quarrel whatever with the test content, it anything it is too widely divergent and covers way too much material that is too far afield. Through General class, Hams should be tested on the core knowledge that will be needed to exercise the privileges granted safely, legally and with some assurance that they will be able to recognize problems when they arise and avoid inteference to other services, and other hams. Beyond that, the more advanced grades can be tested on more advanced subjects.

To insist that only one or two classes of licenses are needed is to advocate that little or no technical testing is needed.

I live in northeast Ohio, and frequently attend a Bike Nite in western PA.
There's a gas station right at the border, and every Wednesday night all the
helmet-less Ohio riders stop and put on their lids because PA has a helmet
law and Ohio doesn't. They keep the lid off as long as they can, but they put
in on to cross into PA. I wear my helmet (despite my anti-intrusive
government feelings), so I don't know if PA cops will ticket helmetless Ohio
riders, but I have to believe ALL riders wouldn't put on their lids if they
didn't have to.

YMMV

I keep hearing this, but I'm unconvinced that it happens very often. I think it's a much more difficult feat than you think it is. It's certainly more difficult than what I had to do in 1968 to get my Novice license. Ed has posted the Novice chapter of the 1962 License Manual. By 1968, that chapter had expanded by a page or two but was still a fraction of the material we ask entry-level hams to master now.

And I'll tell you something else: When I got my ticket in '68 I didn't really understand much of any of the technical stuff. Neither did most of my contemporary Novices. And that was okay; that was how it was *supposed* to be: the Novice was an entry-level license. I'd be willing to bet that was also true of most of the people on this group who are carping about the "dumbing down" of ham radio. (Or, as one email message I saw said, the "dumming down" of ham radio.) They just can't remember how truly ignorant they were when they were first licensed, and that being licensed was their doorway to becoming less ignorant.

Now, some of those contemporaries of mine are still hams and don't know a great deal more technically than they did then. (Even some who have Extras.) Others have learned a lot more -- because they were interested.

> I have no quarrel whatever with the test content, it anything
> it is too widely divergent and covers way too much material that is too far afield.

I agree with that.

> Through General class, Hams should be tested on the core knowledge that will be needed
> to exercise the privileges granted safely, legally and with some assurance that they
> will be able to recognize problems when they arise and avoid inteference to other
> services, and other hams.

And I agree with that, too.

> To insist that only one or two classes of licenses are needed is to advocate that
> little or no technical testing is needed.

I have yet to hear a compelling argument why the Government should test for knowledge or skill beyond "the core knowledge that will be needed to exercise the privileges granted safely, legally and with some assurance

that they will be able to recognize problems when they arise and avoid inteference to other services, and other hams," which is your excellent description of what's really needed.

All you have to do is read rec.radio.amateur.misc and see general
coverage TX mods for ham radios openly posted and encouraged.
I overheard some yahoo breaking in on one of the CAP repeaters
yesterday during a SAREX and he had to get shooed off the government
frequency. Not saying it was a ham. But every other radio for sale
in these newsgroups has the MARS/CAP mod and I doubt that 5% of hams
belong to either Civil Air Patrol or MARS.

1. Yes the 811H uses aproximately 12v for relay switching. No problem. 2. Unless you see serious voltage drop while on 110v, you should see not appreciable improvement. Measure your AC line or observe for excessive HV drop on the amplifier meter. Anything below aproximately 1750 would be excessive. 3. The 830S requires a high impedance mic. input. The 444 is a good choice. But may be a bit bassey for your taste. All you can do is try it. The D-104 with the ceramic head and pre-amp may be a better option based on your criteria.

Steve,

One more thing...make SURE you USE THE ALC line. Or you will overdrive the amplifier with that rig. You only need about 60 - 85 watts. Depending on the band.

John,
fronm a fellow ham (namely: me), I have the following to say:

SHUT THE FUCK UP!

You are primarily the reason why there is so much strife in this (and other)
newsgroup(s). Everytime you sit down and start typing, all that issues from
the attempt is a bigotted, inane, off topic, illogical diatribe realted to
NOTHING BUT YOU!

Frankly, I don't know who is worse; you or CBRambo????

I've said my piece. now you get lost John Mackey (A.R.S. KA0SSF).

DE N7ZZT, Huron Kansas

That's the question I have been asking for years. After memorizing a good couple of dozen chapters out of the Bible, word for word, the ARRL License Manual was a piece of cake for me. And a pox on the person who suggested that I should have spent 5 hours of my income on an ARRL Handbook. I thought one hour of my income for the license manual was outrageous. :-)

But Dick, this is exactly what I did in 1952. The correct answers were in the ARRL
License Manual so I didn't even have to "block out the WRONG answers". In a sense,
the "distractors" require more work - the "blocking out" part. The answers did,
indeed, jump off the page in 1952 (years before you got your first ham license).
I suspect the reason that you "protesteth too much", is that you rote-memorized
the answers to the questions and are just too ornery to admit it.

You are right to check and do as much refference checking as you can about a trading or selling contact. I can't believe that at 58 yrs of age I was as naive as a child on a 'trade amp for radio' deal. I am out a great L4B amplifier. I may purchase something here again but it will be a credit card purchase or COD to my door. Right now I am more upset with myself over this than I can possibly relate to anyone.
I am going to wait a few days, organise my thoughts, before publishing the details of my careless and over trusting missadventure. I will need to let the HF trader nets know of this also. This isn't the only place you get the shaft from blind trust.

6802. TVI on Channel 5

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-22 00:00:00 UTC
From: jathatcher@hotmail.com
Message-ID: <7d4fvh$mi5$1@nnrp1.dejanews.com>
Source record: 147612

I live along the Southern end of the Salt Lake region, in Orem Utah about 70 miles from the TV transmitters. All channels have near perfect recepition except for Channel 5. Channel 5 suffers from TVI that on screen resembles CB or HAM interference. It is usually worse at night. Sometimes it is bad enough to blank out the picture. When it is this bad usually channels 2 and 4 are also affected to a lesser degree.

I have tried toroidal core snap-ons on the TV's power, a power line conditioner, and FM filter. Nothing. The antenna is mounted in the attic and is a Channel Master "fringe-area" sized VHF/UHF connected to 4 coax jacks in the house using R6 coax cable. It was professional installed. All my TV's including a presumed good quality Panasonic Superflat 27 inch display the Channel 5 TVI problem.

While the picture interference seems to suggest CB or HAM interference (based on the examples I have seen at the FCC web site), I have never heard an operator's voice. Also, on occasion at night, the Channel 5 interference will suddenly clear for about 10 seconds then return when a refrigerator or furnace fan powers on. But on most other occasions, the refrigerator or furnace fan has no effect.

This interference has me baffled. Could there be more than 1 problem?

What could this be?

I'm really pleased to see this sort of testing taking place, and the results shared. I do have a few suggestions.

Especially if you're comparing a vertical with a horizontal antenna, listen to each signal with both antennas for a couple of minutes or more if possible. I've seen polarization shift on 40 meters cause 20-30 dB changes in one antenna relative to another with a period of a minute or so, with each antenna getting better or worse in turn.

Set up a simple SPDT switch so you can instantly switch between the two antennas. This is essential. Make sure that both antennas are reasonably well matched as seen by your receiver.

I don't have a good rule for spacing two antenna to be compared, but modeling should give you a good idea of whether mutual coupling will significantly affect results. Your measurements won't be valid if there's significant coupling.

There's nothing wrong with using the S-meter for comparisons, as long as you carefully calibrate it beforehand with the step attenuator. Make sure that measurements are made with exactly the same conditions (preamp in/out, same band, same RF gain control setting, etc.) as when calibrated. It would be a good idea to re-check the calibration occasionally. The best way for careful measurements is to have the attenuator in line with the stronger antenna, then switch attenuation until the signals from the two antennas are equal. That's not always practical, though, especially when there's a lot of fading.

Make notes of the likely distance and direction of each station heard, along with the dB difference between the antennas. (Better yet, record the call sign, then look them up in the Callbook. It'll occasionally be wrong, but most will be correct.) This will help you get an idea of how the antennas compare with respect to azimuth and elevation angle. Dating your entries and adding other notes (e.g., how wet the ground is) is also helpful. Here, there's a large difference in ground conductivity between summer and winter. I see about 6 dB difference in my vertical's performance relative to a dipole from one season to the other. (Only a small part of this is due to efficiency change due to changing ground system resistance, as measured by an impedance meter.)

Don't bother transmitting and getting received signal reports. They're worthless, at least for quantitative purposes.

I'm looking forward to seeing your results!

Roy Lewallen, W7EL

>
> If enough people respond it will get his ISP's attention.

I agree. It would seem that ignoring him does nothing to deter his behavior.

This is a letter that I have sent to Dejanews regarding this problem:

John,

Please refrain from spamming the rec.radio and alt.radio newsgroups with
these off topic messages. A copy of this message is being sent to dejanews
to alert them of this unwanted behavior, and to request that they do
something about it if you don't.

Thank you,
-Phil

included for reference:
<The offending message is quoted here>

I have, and will continue to post this letter as a reply to each off-topic
post, cc'ed to abuse@dejanews.com I figure they will receive at least 20
messages a day from me alone. If we all do this, they will yank his dejanews
account faster than you can say "Off Topic Mindless Junk Posts".

If the behavior continues after that, then we can concentrate on his ISP,
which incidentally, is not usa.net. Instead direct your complaints to
abuse@home.net

-Phil

Hash: SHA1

My employer, Lucent Technologies, is looking for a Senior RF Technican
with the following abilites and experience:

Senior RF Technician Job Description

1. Ability to read schematics.
2. Ability to solder, including small surface mount devices,
and build up RF, analog, and digital circuits in both prototype
and "small lot production" environments.
3. Able to operate various equipment including oscilloscopes,
voltmeters, spectrum analyzers, and RF generators.
4. Familiar with RF design principles and RF test methods for
return loss, transmission loss, output power, matching and RF grounding.
5. Ability to troubleshoot RF circuitry down to the component level.
6. Perform testing of products based upon a starting point provided
by RF engineer.
7. PC competency using word processing and spreadsheets, good
communication and documentation skills required.
8. Responsible for management of engineering lab, including
ordering/stocking of components and lab accessories.
9. Two years minimum previous experience as RF Technician

Location: Allentown, PA

This will *probably* be a 6 month contract position initially, with
renewal or conversion to permanent, direct employment likely
for the right individual.

If you're interested in working with modern digital radio equipment
in a design and development environment, please e-mail me your
resume ASAP. (MS Word or .pdf format preferred, though plain
ASCII, MS Works, or WordPerfect formats cana be handled as well.)

6 Month Contract?? No thanks.
"Temp" or "contract" jobs are for suckers.
I've been there and I'd rather swamp toilets then play the
"Oh, just a few more weeks and Human Resources will get to you!
Honest we're going to hire you in just a few more days!" game.

I can't say about your specific company-- maybe you're the
rare exception that is being straight with prospective employees--
but I've seen companies "dangle the carrot" in front people
while treating them like dirt over and over again.
It's counter-productive and it's immoral. And you have
no rights when you're a "contractor." Employers can do
whatever they please to you, no matter how despicable,
and you can do exactly -nothing- about it.

No RF tech worth his soldering iron is going to put up with it
for very long. How long would YOU work with no medical
insurance for you kids, hmmmm??

Good RF techs who know their stuff and will COME TO WORK and
WORK when they get there are getting *really* tough to find.
Yes, companies can get people who know how to change parts
and just "meat-grinder" them-- sure costs alot
to do that and not much gets fixed, but they can do it.

I'm a darn fine RF tech and I've been a manager working
the very best techs walking the planet, IMHO ;-).
I wouldn't take a "contract" position on a bet,
and I don't think any of my people would have either.
Either pony up the money for wages and benies
or go get yourself a 22-year-old tech school grad who comes
to work about 3 days a week, 2 of which he spends on the phone.

Oh come on now...

David Stinson wrote
>
>6 Month Contract?? No thanks.
>"Temp" or "contract" jobs are for suckers.

For a person who has a steady income from an earlier retirement
(I retired at 40), and only wants to work part time in various fields,
it is a good way to stay busy and interested.

>I've been there and I'd rather swamp toilets then play the
>"Oh, just a few more weeks and Human Resources will get to you!
>Honest we're going to hire you in just a few more days!" game.

Just send the resume and the cover letter, and forget about it.
If they call, and you're busy, tell them tough luck. Why worry,
be happy...

>It's counter-productive and it's immoral. And you have
>no rights when you're a "contractor." Employers can do
>whatever they please to you, no matter how despicable,
>and you can do exactly -nothing- about it.

On the other hand, you don't have to put up with all the
company crap. You come in, do the work, go home. No
additional duties.

>No RF tech worth his soldering iron is going to put up with it
>for very long. How long would YOU work with no medical
>insurance for you kids, hmmmm??

What a crock. How do you think people who build homes
all their life get by? They'd love to get a 6 month contract.
One contract leads to another. If not, you go to work at 7-11
until the next one comes up.

>I wouldn't take a "contract" position on a bet,
>and I don't think any of my people would have either.

Who cares.

>Either pony up the money for wages and benies

Carl, I shouldn't have unloaded on you.
I regretted it as soon as I hit the "send" key.

I've watched several old friends, middlin' to good techs,
get done this way over the last five years.
I could tell you some horror stories.
Broke my heart. One fellow's self-confidence
got worse and worse each time until he finally decided
that, if he couldn't take proper care of his family
then he didn't have a reason to keep living.
So I guess it's a hot button of mine.

That's no excuse for unloading at your doorstep.
Please accept my apoligy for letting my heart
overrule my head tonight.

Now wait a minute, Dean. Before you go off the deep end you have to realize a few things here. Paul probably has never heard any UT0 stations on his local VHF repeater, so you have to excuse his ignorance.

With the 400,000 Indonesian, Filipino, Chinese, and South American CB'ers we have on ten meters now, one more 5 watt signal will do permanent damage to the E layer and ten meters will never work again.

And you have to realize that Paul probably was a CB'er before he got his ham license, so it's his job as a duly licensed amateur radio operator to condem anyone associated with 11 meters in order to squelch any thoughts that maybe he used to operate there....

Finally, Dean, you have to realize that Paul doesn't realize that the CB'ers all over the ten meter band are using Kenwood, Icom, and Yaesu radios and 'export models' of good buddy stuff, so few of them are converting anything to become a pain in the neck.

Or maybe Paul is just like he is because somebody backed up over him with a truck.

And to our friend, UT0IY, yes, you can convert old 11 meter radios to ten meters, but how to do it is very dependent on the type of radio. The old one I converted required crystals be changed, some of the new ones don't. Post the model of the radio you have and maybe we can help you find out how to do it....

That's easy if you have been involved in Amateur Radio long enough to notice the difference. - And if you are capable in being objective about what you are looking at.

Anyone who claims that entry-level Hams are as knowledgeable today as they were in the past is full of farina.

I spent a good deal of time with entry-level hams in the late 60's, and know a good number of new Hams today. Ed can rationalize how temporarily cramming answers without bothering to understand what they mean is allegedly just as good as actually learning and understanding a subject until he's blue in the face, but that won't change the facts.

The proof is in the pudding, as they say. - And we have a rather large number of almost totally clueless new Hams today to prove it.

I personally know several women who crammed for an entry-level Ham ticket for the express purpose of using a local repeater to talk to their Ham husbands on the way home from work, kind of like an almost private CB channel. Our expert Ed may be under the impression that these ladies learned something from the "cram 'n slam" test-taking procedure, but I know them, and can assure Ed that none of them could tell you what Ohm's law is, for example. They know which button turns the radio on, and how to key up the mike. I personally know of three of these ladies who depend upon her husbands to tune the radio back to the proper frequency if it accidentally gets changed.

There wasn't much of that going on in the late 60's, Ed.

Wake up and smell the coffee.

I have been in the hobby since I was 10, I am now 32 and I don't see any difference in the way hams behave now and they way they did 22 years ago. The only difference is now they have news groups added to the list. It used to be either at club meetings or on the air. I have always thought it was stupid, but I still enjoy my little niche in the hobby and I simply tune the others out if the whine.

Roy,

You are right on the money!!!! How many times I've heard " works great. got 57 and 59 reports from europe" When the bands are open, loading up a bed spring with 5 watts will give you those results. I RARELY hear a comparison to a standard dipole. Has anyone actually compared a gap antenna to various dipoles up a 1/2 wave or so? Even this may not be conclusive. A better signal report from Asia on one antenna maybe worse from Europe. Radiation patterns of antennas are not the same, and this is not necasarily better or worse.

The three most important characteristics in multiband antennas are Efficiency, Efficiency, Efficiency .

Hey Randy,
Back before the mid 1980's this was true. A company had to have a
licensed first or second clas RTO on site to do repair work on business
radios and one on site 24 hours a day at a commercail broadcast station.
With government deregulation this all changed the first class and the
second class rto became what was known as a genral RTO. That now has
faded away also. With all the government deregulation of radio you don't
have to have a genral class rto on site anymore. Braodcast station now
only require that you be a college grad to be the enginear at a radio
station. If the county had 4 licensed tech on site and 15 unlicensed
techs even at the high of government regulation the shop was OK. This
was because of the 4 licensed techs. They were only required to have
one. Now they are required to have none. They call is deregulation. I
know this to be a fact because I tried to get a CB tech who didn't have
a license to work on CBs busted. Welcome to the world of deregulation.
BTW this guy tears up more radios then he fixes. I hope this helped.
73 from Oris
http://www.dirtball.com/band.html
Here is my answer to the A.R.R.L.'s smiplfied license structure.

Who is Lenny and what did Riley do this time? Have they gotten 10-5 yet
aka as squeeky?
Check out my answer to the A.R.R.L.'s simplified license stucture. In
all honesty I have got some who like it some who say its a good idea and
some who say its a good ideal thats why the FCC wouldn't go for it. Some
who say its still to much regulation. Tell me what you think. Can you
come up with a better plan to stop this ongoing ripping off and name
calling between CB radio operators and HAMS. I say lets anex 11-meters
as well as its operators.

Very nice point, Roy. Actually, for the last month I have been in the process of setting up just the test that you describe. I will be doing A/B tresting of a GAP Titan DX against simple full size single band verticals. The monobanders are carefully modeled (using EZNEC of course) and thus offer an absolute standard of comparison. This may help others to extrapolate my GAP/vertical comparison to other types of antennas such as a dipole at height x. I plan to use a step attenuator, compensate for differentials in feedline losses, and ground or detune each antenna which is not in use.

BTW, I'm not a guru, just an interested amateur. so if anyone has suggestions on methodology for such a controlled study, please let me know.

It may take some time to complete, as I will only do one band at a time, and probably only 3 or 4 bands at that. The 15 meter comparison should start this weekend if I get the antenna up. I will publish the results for all to see.

FTR, I have no connection with GAP, and no position in the pro or con debate, just curiousity.

Oddly enough, we use volts per meter too (though we spell
meter correctly). If you've read my posts, you've seen it
mentioned more than once. The problem for most hams
is that you have to get far enough from the antenna to get
out of the near field (at least 5 wavelengths) before V/m
has any useful meaning.

On 80m, that's about a quarter of a mile (in broadcast we start
at 1 mile and go out to 10 miles along the cardinal and subcardinal
compass points when doing a proof). That's difficult to do for a
ham without a helper. Multipath, conducted and re-radiated signals,
terrain, etc, all conspire to make this technique fraught with errors
if it is not done very carefully. It usually takes us a couple of days
to proof a broadcast antenna on the ground, and we still have fairly
large amounts of uncertainty.

Lately, we've been hiring companies who will fly the patterns for us
(for TV and FM), but that's not useful for AM because it doesn't
give an accurate picture of the groundwave, which is what we need
to know in AM broadcast. It does work well for TV and FM, though,
and saves a bunch of time.

6861. Need converter to use HT Mike on a CB

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-23 00:00:00 UTC
From: Adam Huber <ahuber@csulb.edu>
Message-ID: <36F7D76E.89D613CE@csulb.edu>
Source record: 147451
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I know that most HT mikes will not work with most CBs because they use different types of microphones (I don't remember the names.) I need to use an HT mike on both my HT and my CB (using a switch to switch back and forth.) I was reading either QST or 73 years ago and saw a schematic for a converter which one could use between the HT mike and the CB. I can't find the article. Does anyone know where I can find this article or a schematic for this device.

Thanks and 73,

Of course, in maritime mobile use the correct unit is
volts-per-knot-second. And I believe it is common to use
volts-per-cubit in Egypt.

Dear kmortensen,
I just love ALL of the great TECHNICAL answers that are provided by ALL...

The only Problem that I have with your version is that I have not seen any DATA From ANY manufacturers that relates the specific performance of any of there Products to a "standard dipole", some even have a problem identifying what is Considered a "standard dipole".

Unfortunately many Present Day Hams are not as fortunate as our predecessors in Having "Antenna Farms" or the Ability due to CCR to mount "Conventional Thinking" Antennas, as a matter of fact many may not have even the limited Space that some of the "Compromise" Antennas like the GAP needs, And yet many Have found "inventive" ways to operate and NOT by loading "bedspring"...

The Name of the "Ham" Game is "Contacts", if you only have a Patio to work with Then use the BEST that will fit in that space and your working Preferences, Please remember that a "Dummy Load" is a also a VERY efficient Multband device.

We all have to look at the individual location that the average amateur is
Operating from to best validate antenna performance, I will trade many tings
to Have a Full Size 1/2 wave A/G antenna for 80 meter's but the living
"Environment" will not permit it in my wildest dreams.

We must keep our minds open to the Operational Needs of the Present Day Operators and if antennas like the GAP permit them to enjoy the Ham Hobby then That is the True TEST of "Efficiency, Efficiency, Efficiency".
Is it Efficient, then its works well?
For the User....

Mike, and Group

Wow, Ok the best Real IDEA so FAR...
If you can do the test then by all means PLEASE post the RESULTS, As far as 15 meters is concerned I can rationalize the Vertical (Size) BUT Will you be building a FULL SIZE 80 meter vertical, Wow can I come over on weekends an use it, I will of course bring the liquid refreshments.

Hi everyone
can somebody help my?
I'm looking for a circuit plan from a VOX.
Or is there an integrated circuit available ?
Many thanks
Matthias

Brent,

There has been a big change since I became a ham at age 12 in 1954.
There was respect, nearly everyone had an Elmer to help them along and
show them the true path and fellowship. How to act and help out each other.
Good manners. It does not exist much any more. When I was on there was no
cursing, cussing and polite people. It is a reflection on the changes. My
Elmer
W4AER would be rolling over in his grave if he heard what is on the bands
now.

Alan K4AVQ, P40AV ex W0RIC

Avoid posting to this geek, he is merely a troll, are you aware what trolls are and do. Instead of participating they merely wreck havoc and ruin your forum, he still posts here for a rise but we don't reply to him either. You would do well to merely bundle up his posts and send them to alt.net, the sys-admin is Chris Caputo he is just about useless at dealing with this species which uses his nntp server to wreck havoc, I suspect the troll is a child or an child mind trapped in an adults body. This is my final post on the subject just in case you don't realize "who" this person is.
Yesterday he posted as
"the cuban"
"covert62hellsouth"
" 7ravi2"
"Travis"
" (Ret) Scratch "&#65533;" Sniff"
So look at the posting path, if you see news.alt.net anywhere in the path it is him, so bundle those posts up and send to Chris, but above all don't reply it will merely turn all your posts to shit about him and that is what feeds the sick idiot

I should point out that I took my last radio exam 30 years ago at the FCC office in Kansas City and that was a decade before the infamous Bash books, and a 15 years before VEs and question pools. I did, however, administer tests as a VE team leader for about 8 years and saw a lot of this sort of thing. I knew, or became acquainted with many of those tested as they entered the hobby and advanced. The objective of taking a test is to pass it. It's hard
to argue with one who is determined to do it in the way that he sees most productive, and a VE is obligated to sign off on anyone who fulfills the legal requirements. I would like to see a complete revamping of the amateur tests to go along with the restructuring. Of course it won't happen, but I think there should be a entry level class, the Novice would do nicely, with expanded HF privileges, including some voice, at a reduced power level. The test should include ONLY the basic core information necessary. The General should expand on this basic core to include a wider and more in depth coverage of that core knowledge, and should include most of the amateur privileges available. On from there, Advanced and Extra should be expected to be familar with a wider range of communications modes and topics. The Extra should, as always, get the most comprehensive exam and the bottom 25 khz of band data portions should be awarded as the only added privilege.

> I would
> do MUCH better associating the entire question with the entire correct

Me too. I've never been good at guessing or memorizing that which I didn't understand. But I've seen some who were pretty good at 'playing the game'.

Not if he has no true comprehension of the question, and just learned to point to the correct answer by word associations, or by matching a questiaon to it's answer by repetitous
study of them as pairs.

That's the point, but the example is improper. Probably most people do memorize that a unit of electrical intensity or pressure is the Volt. But on more involved topics, when one has no background in the material, it can be far faster and easier to just 'study the test'.

Oh, probably he did learn 'something'. But I am quite sure that the stories of the Extras who don't know how to go about working an Ohm's law problem are not all false. I've seen some them too. At least one would expect them to learn how to go about finding the information needed. But when the concept of resistance, voltage, and current has not been established along with their relationships, it's futile.

I agree, as far as the material covered is concerned. But I question the ability of the current testing system to determine the quality of knowledge of applicants.

Message-ID: <36F6F8DF.5A5E5A3C@t-online.de>
Source record: 147498

Hi,

I have just released a nice little Software for:
(download from my page)

Read/write/edit any SmartCard like
- async.T=0 (GSM SmartCards)
- sync. Telecards (Phonecards)
- sync. I2C (Towitoko Cards, 2Kbit-64Kbit, ...)
- sync. 2-wire (German Social insurance, ...)
- sync. 3-wire (German Social insurance, Towitoko Card with Pin, ...)
- sync. microwire

Read/write ANY Serial EEPROM
- I2C (24C00,24C01,24C02,24C04,24C08,24C16,24C32,24C64,24C128,...)
- Microwire (93C46,93C56,93C66,93C76,93C86, ... 8 and 16 bit org.)
- SPI (X25C02,X25020,X25040,X25057,X25138,X25170,X25330,X25650,...)

It is developed with and for the makinterface,
but some parts of it might work with some
other interfaces like the DumbMouse, SerProg,
Phoenix, ...

What this has to do with Radio Amateur :)))))

These nice little EEproms are in almost every
device today. In your GSM phone (containing
the byte for activating the engeneering menu),
in your DVD player (containing the country
code), ... and of course in EVERY Radio Scanner
and Radio Transciever.

I have read (and written to) without problems
the EEproms on my TM-V7 and IC-Q7.

And I am VERY disapointed in ICOM.

The EEprom is used only 25%, the rest is EMPTY.

I don't understand the world any more, instead of
pushing the technologie to the edge, ICOM is cutting
the Frequency range, the number of memorys, ...
and the Hardware is all there.

What a shame, in the intention to sell the IC-R2
they have crippled the IC-Q7.

Well now I am playing a little with the CPU, the
M38267M8L-209GP, I have found the assembly language
manual, ... and with a little luck we will be able
to write our own firmware soon.

And I bet my Firmware will be better then ICOM's, :)
it will have 800 memorys, 80 scan edges and will
cover 0.5-1.6GHz :), and I will help ICOM a little
bit, I will make the IC-Q7 the best mini HT :)))))

Please don't ask my about the possibilitys the
EEprom reprogramming will offer for the IC-Q7,
I have to explore a little bit (In my free time)

The Software was tested with every SmartCard and
EEprom I could find, play a little with the
Software and report any bugs, sugestion, ...

> >identifies the station, not the operator. I have always found this to

Ah while a call sign may identify the station an Amateur Station is very personalized, its a hobby and the call sign was earned by the work of an individual, as a hobby the individual who earned the call sign is usually the one using the "station" the majority of the time (except for say a club or repeater). Of course its not really even an individual station as we take our Callsigns mobile or portable with us and even our fixed station is usually in our personal residence. So its pretty easy to see the call sign being linked with the individual, besides there might be a dozen John Smiths or Jane Thomas's but the call sign itself is unique (and as stated above usually is linked to the single individual who holds it).

Sometimes calls have sentimental value, for example I don't really think of myself as N9KKP which I got when I failed to renew my license on time during a period of inactivity. Thanks to the Vanity program for a measly $13 I will (hopefully) receive my original Callsign which I earned through a lot of hard work when I was in High School a big accomplishment for a 14 year old kid. I think that's the other reason for personalizing our Callsigns, its like a fond memory, I have thousands of conversations as Steve some good some for work, some not so good. But all the conversations I've had with my callsign since it was a hobby and for fun have been mostly pleasant (similar to my IRC nickname, it helps make the hobby relaxing leaving some of the day to day issues of ourselves a bit behind).

Regards,
Steve

Another version of this say that he got four months.

And why not do business with the DEA. There is nothing in this story that
indicates they are problem to deal with. However it is apparent that trying
to defraud the DEA could make your life difficult.

I've done a lot of usenet purchasing/selling over the years, alot has to depend on having the intuition on when to go/not go I usually will make at least 1 phone call to the prospective party, and ship COD. The phone call helps weed out a significant amount of the deadwood, there are those who can look good on email but you can tell when you get them on a more personal level that something is amiss. As always if a deal sounds too good to be true, it may very be a scam. If you still are concerned there are a some sites with for a small fee will do escrow payments, this also I beleive permits you to let the buyer pay by Credit Card. They basically take payment from the buyer notify the seller. The seller then ships and the escrow sites verifies that shipment of the product has been received. At that time they release payment to they seller.

I have more confidence in a seller that states his price. The auction sellers are essentially saying they want to get the most they can regardless of the fair value of the item. I suppose this is the capitalist way but it seems less than straight forward to me. I also suspect that you're more likely to get the shaft from an auction deal.

I have no trouble with a HAM doing a general TX/ RX mod on his/her radio. And I have had rigs open to do so.

But the HAM is not doing so with OPEN DISREGARD for the FCC rules of the Amateur Service. Nor are you likely to find a large number of these HAMS flaunting themselves on the frequencies of another Licensed service.

The open sale of amplifiers for CB use, and the incursion of CBers into the Amatuer/Commercial frequencies should be deal with swiftly and stiffly

A hefty fine and confiscation/destruction of the illegal gear might get the point across.

TNX, Mike

A few observations on e-bay:

How do we know the seller is not bidding against himself,using another name and address,to raise the price?

What reputation does any e-bay seller have to protect? If he gets caught,he just makes up another name for the next deal.

In response to the "what seller in his right mind" question,there are actually people who are not out to get more than the fair value of an item. Apparently you're not one of them.

Antennas are like cars. Some people buy a car because they like the color, others like the performance, some like the reliability, and some the price. Some buy an antenna because it stays up in the wind, some because it's quiet and broadband, some because they can use it on all bands, and some because of the price. People will discuss the SWR and mechanical details all day, but almost nobody will bother to get a switch and step attenuator and make a real objective comparison to another antenna. My conclusion is that the factor people care the least about is how strong a signal an antenna radiates.

So, what's the best car?

Roy Lewallen, W7EL

Was just reading the ARRL members only page, concerning the latest FCC enforcement actions.

It would appear, even without specific information, that the FCC enforcement folks have an extensive remote monitoring capability. A logical person might conclude that the enforcement folks can monitor any freq., anytime, from anywhere. Given current technology, a remote direction finding (DF) capability probably works in conjunction with the monitoring capability.

Hollingsworth has been a gentleman from the start, but it appears the man is also very serious about cleaning up amateur radio.

>to the abuse dept of where you get YOUR internet access!

John. Face reality. You are a spammer. You will be dealt with as such. Go ahead and prepare your complaint. I don't post the abuse messages from work, so you will have nothing to back it up. I don't even post them under a username that reveals my identity. I could even change usernames each night until @home gets sick of you and cancels your account due to spamming. Game over. You lose.

There's an easy way to end this, John. Just keep your little spat in your OWN newsgroup - you did claim it was YOURS didn't you? I won't send out any complaints unless I see your off-topic messages here in the scanner groups.

And don't give me that line about policing via peer pressure. That's a crock, because you don't even follow it - how many messages have been posted in the last 2 days asking you to stop? Yet you continue. So don't give us that line of B.S.

Just keep your little lover's quarrels in your own newsgroup. Then I'll leave you alone. Sound good to you?

-Phil

Paul,

UT0IY may well be a valid call sign. Looking at the QRZ New DX page at http://www.qrz.com/wrad/directory.cgi?new_dx I find a couple other UT prefixes listed. I also find in the 5th edition of the ARRL Operating Manual (ch. 17, pg. 90) that the prefix UT indicates someplace in the Ukraine, specifically Kiev.

I'm not up on searching for non-US call signs online. I've no way of confirming that UT0IY is valid or not - but it sure looks like it may be, but of what class/type - I don't know.

Now if this poster had indicated he was some yak-jawed 'good buddy' I'd have to totally agree with your suggestion. In this case though, methinks you've keyed up before listening.

March 26, 1999
Target: undisclosed.recipients

Welcome to the W8MMQ Wire, for March 26, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: Riley Hollingsworth visits the ARRL HQ; Goldwater antennas dismantled; Mitnick pleads guilty; upcoming contest information; and much more!

RILEY HOLLINGSWORTH VISITS THE ARRL HQ
After six months as the FCC's top Amateur Radio enforcer, Riley Hollingsworth, K4ZDH, says he's pleased with the progress he's made and the support he's received from the amateur community. "I though it would take a year or two years to be at this point," he told ARRL staff members March 17 during a visit to ARRL Headquarters. "We've had some very good enforcement luck."

Amateur Radio enforcement has been "one of the few victories the Commission has been having these days," Hollingsworth said, and he doesn't expect the impending FCC restructuring -- including creation of a new Enforcement Bureau -- to affect its course or momentum. At the same time, Hollingsworth expressed some concern that his efforts not be perceived as the FCC "gone crazy" on Amateur Radio enforcement. "I don't want people saying, 'This is too much government,'" he said.

Hollingsworth said that enthusiasm for amateur enforcement has even spread to FCC field personnel, some of whom are hams and who now ask to be included in amateur cases. He pointed to a recent case of interference to a Pennsylvania repeater system that came out of an investigation at the field-office level.

Calling Amateur Radio "a great natural resource," Hollingsworth said he felt privileged to be in his current enforcement role and was enjoying his work immensely. At this stage in the FCC's latest enforcement initiative, Hollingsworth says he's still making up for the FCC's "long period of neglect" of amateur enforcement. But he said he also looks forward to the day when he's no longer needed. He also said he can appreciate the frustrations of the Amateur Auxiliary during the years of FCC enforcement neglect and he welcomes their cooperation in the future.

In the weeks ahead, Hollingsworth said he hopes to turn his attention to such problems as the incursion of unlicensed operators on 10 meters -- the so-called "freebanders" who often stray onto amateur frequencies -- as well as the improper marketing of equipment to unlicensed individuals and examination fraud cases. He also plans to add some casual monitoring capabilities at his Gettysburg office. "If they know that we're out there bandsurfing, it will help," he said.

Hollingsworth said he's currently working about a month behind in replying and advised those contacting him to use either a letter or e-mail (rholling@fcc.gov) instead of the telephone.

ARRL officials and staff members were quick to praise Hollingsworth's successes as well as his approach, which has been a combination of stern sanctions and "jawboning" with alleged offenders to resolve enforcement issues. As a result, he has not had to designate any amateur cases for hearings. "Few hams have the ability to change the hobby radically," ARRL First Vice President Steve Mendelsohn, W2ML, told Hollingsworth. "We're real fond of you." ARRL Educational Services Manager Rosalie White, WA1STO, called Hollingsworth "a huge breath of fresh air" for ham radio.

During his visit, Hollingsworth made a quick contact with an acquaintance on 20 meters from W1AW. He also had the rare opportunity to wield the original Wouff Hong and Rettysnitch -- the traditional symbols manufactured and invoked by "The Old Man" during the early years of the hobby to combat poor operating practices. League officials expressed the hope that the experience would provide an additional boost to Hollingsworth's present-day enforcement efforts.

Taken from the ARRL Letter, 3/19/99

HAM RADIO AS A HOBBY
I have decided to take a portion of this week's newsletter to discuss something that has been bothering me for some time. Yes, it is an editorial comment, not really news, so you can scroll on by if you wish.

Amateur radio, called "ham radio", is a wonderful hobby, and I have enjoyed it for about five years.

Since the day I received my original license in the mail (KB8UYZ), I have been active on the bands, and talked with many, many different people. In fact, that is one of the main reasons I enjoy the hobby, meeting new people, and discussing certain issues and topics on the air. You could say that I love to "ragchew."

Now, I am open-minded, and am willing to talk about nearly anything. But, for those in the Mid-Michigan area who know me, I enjoy politics. For several years, a group of hams, including myself, have gotten on local simplex frequencies, and discussed current political issues, often going well into the night. We do this on simplex as not to offend someone that might be listening on a repeater (which would give us wide coverage) who might disagree with what we are saying. In other words, we try to be polite about our discussions.

However, over the last year or so, there have been those who truly despise what we discuss on the air. They seem determined to give us a bad name, or get us off the radio altogether. Several of our regulars now rarely pick up a microphone. And now, another has told me that he is giving up ham radio, and in fact, was offering to sell some of his equipment to me. Now, this person is the LAST person I would expect to make a choice like this, and it is really disturbing. So, is this person just going to throw away all of the years of enjoyment he has gotten out of this hobby, just like that? It would seem so.

This person has told me that he is fearful that his phone lines are being monitored; he has seen strange vehicles near his house, etc. I for one can say that for several days following one of our "good" political discussions, certain "strange" things happen, but I have always passed it off as area hams trying to intimidate, or "scare", us off the radio. I doubt very seriously anything would come of it. But this friend of mine thinks otherwise, and it is really sad.

This is a hobby, a past-time. It is one of the greatest hobbies that I have had. We are all going to disagree about something, and politics is certainly an issue where we can disagree. But you do not throw away your past-time, and your years of investments in it, just because someone is playing games with you, and disagrees with what you are saying! First of all, what ever happened to "free speech!" We have the right, under our nation's laws, to talk about certain issues, such as politics, religion, etc. without the fear of intimidation or oppression. Other countries do not have that privaledge.

I say, grow up! Do not let a few petty no-bodies determine how you will enjoy amateur radio. Just ignore them ... they will eventually get tired of playing their games, and go away. Giving in to them is giving them exactly what they want, and I for one will not do that!

Enough with the "soapbox" ... on to more news ...

W8MMQ/KC8KFZ

GOLDWATER ANTENNAS DISMANTLED; SOLD
The antenna system belonging to Senator Barry Goldwater, K7UGA, has now been dismantled and the antennas sold.

Throughout the Vietnam War, Goldwater used that antenna system to complete thousands of phone patches for the troops, allowing them to contact their friends and families.

Barry Goldwater, who was an active amateur radio and MARS operator, became a silent key on May 29, 1998.

W8MMQ/KC8KFZ

KEVIN MITNICK PLEADS GUILTY
The ham dubbed by the press as a super hacker could be a free man within twelve months. This as the Los Angeles Times reports that Kevin David Mitnick, N6NHG, who was due to stand trial this month on software theft

charges has instead agreed to enter a plea of guilty.

According to the Times, Mitnick will be sentenced to five years in jail but will also be given credit for the time he has already been in detention while awaiting trial. The report also says that the thirty five year old Los Angeles native would be barred from using computers for about three years after his release from prison. If he is caught using a computer, he will be returned to jail. The Times also indicates that Mitnick will likely be barred from ever profiteering from his story. This means that he cannot sell his story for gain.

Mitnick was arrested for hacking during the 1980s and previously served a one year prison term. He was on probation in the early 90's when prosecutors say that he resumed his hacking. On Christmas Eve 1992 he fled the Los Angeles area. He remained a fugitive until his capture in North Carolina in 1995.

The plea agreement is still subject to court ratification. What action if any that the FCC might take against Mitnick's N6NHG Amateur Radio license grant is unknown.

Taken from the Amateur Radio Newsline, 3/19/99

FIRST SUNSAT VOICE CONTACT A SUCCESS
The ARRL and AMSAT are reporting that the first voice QSO on the new SUNSAT satellite was a success.

The QSO took place between SUNSAT Project Leader Garth Milne, ZR1AFH and SA-AMSAT President Hans van de Groenendaal, ZS5AKV, on March 14.

It will be a few weeks before the satellite is available for general amateur use.

Visit http://sunsat.ee.sun.ac.za/, for more information on the satellite.

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The CQ World Wide WPX Contest, phone, sponsored by CQ magazine, will run from 0000-Z March 27 until 2400-Z March 28 (CW will be May 29-30). Single ops operate no more than 36 hours, off periods must be 60 min or more. For more contest information, visit the N8BJQ web site at http://ourworld.compuserve.com/homepages/n8bjq/.

International Marconi Day is taking place on the 24th of April to celebrate the birth of Guglielmo Marconi. The event is again being organised by the Cornish Radio Amateur Club. Participating stations will operate from 0001 UTC until 2359 UTC on the 24th of April on all HF bands plus 2-metres. The main mode of operation will be SSB, but all modes are permitted and are actively encouraged. (Information taken from

the Radio Society of Great Britain)

DX REPORT
From Vietnam, 3W6US will be active from the 25th to the 29th of March.

From Mozambique, C91RF/P from Benguera Island is active from the 26th to the 29th of March on all bands, using CW and SSB. This counts as AF-072 for the RSGB Islands on the Air Award Programme.

From Belize, V3IGI will be active from Blackbird Caye, Turneffe Islands, from the 21st to the 26th of March, using SSB on 10 to 20 metres, 40 metres and the WARC bands. This counts as NA-123 for IOTA.

And from Turks and Caicos Island, VP5/IK2GSC and VP5/IK2SFZ will be operational from the 24th of March until the 5th of April, mostly on the LF and WARC bands. This counts as NA-002 for IOTA.

These DX news items came from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE.

Taken from the Radio Society of Great Britain

W8MMQ ANTIQUE RADIO PAGE
For some time, I have maintained an antique radio links page. There are links to great organizations specializing in antique radio repair and restoration, and there are links to some online galleries, with many, many antique radios to look at.

Check out http://my.voyager.net/w8mmq/oldradio/, and let me know what you think! In the future, I hope to add some pictures from my own antique radio collection.

Also, if you know of a link that you would like to see on the page, just email it to me. I will review the site, and consider adding a link to it.

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire. We hope that you have enjoyed it, and please, feel free to pass it along to others.

To read the W8MMQ Wire online, visit http://my.voyager.net/w8mmq/. An archive of past newsletters is now available from the web site.

Information from the following sources was used in the production of this newsletter: Amateur Radio Newsline, the ARRL Letter, the RSGB web site, and other published reports.

Yes Tim,
If you have "Validated" A/B Tests (and not against a "Trap") why are you not posting them?

Stop Jaw Boneing it and put out the DATA.

In my personal Opinion WE as the readers of this newsgroup NEED an INDIPENDENT A/B Test, Its beginning to look like some Axe grinding is coming into play and this bring in the "Smoke" And the best way to clear the AIR is to put the antennas on the AIR in a Test Format.

I and I think that the Group wants a Comparison like Mike AA3RL suggested, I love it, and this way no "grudges" will come into play, just plain and simple TEST.

Mike Please keep the project ACTIVE, the comparison to "Trap" vertical is not Actually valid, your Plan put it into true perspective, If you can do the test as indicated and if it takes a wile so be it but then we will have a RESULT.

Very true. The FCC's monitoring station in Honolulu is locally unmanned yet I was issued a citation due to my sailboat's VHF marine band radio putting out a spurious signal on a frequency which it wasn't supposed to.

Probably too much! I've been learning some stuff though, and I have to ability to check in a few minutes--I have a unix box here in my office, which I can leave logged in, with Netscape running, with the ng's going, so whenever I pop in for a minute, a quick click and I have all the new posts. I can quickly scan (I simply erase all the ones I don't want to read) and then read the ones I want, and then go back to whatever.

I'm starting to catch up, but only after organizing my time a bit and working more. It's always an uphill battle.

When I was in college, it was always a choice between studying and
having sex. Actually, with Texas A&M being an all-male military
college in the 50s, there was no choice. :-)

Didn't sound like an engineering position to me. Sounded like a technician position. Didn't see any requirement for an engineering degree. 'Course, as always, I could be wrong.

But also note that if you change the reference crystal, the spacing will
be different. Also, the CB sets I've seen use the 10.240MHz crystal to
convert the 10.7MHz first IF to the 455KHz second IF. If you move the
reference frequency, depending on the rig you may move the signal out of
the first IF passband.

The CB sets that I've seen block diagrams of use a mixer between the VCO
and the programmable divider. It's there to simplify the calculations
and/or to get the VCo down to a frequency that the programmable
divider can handle.

They use a harmonic of the reference frequency as the second signal to the
mixer. The real change of the CB set's frequency comes from that harmonic,
not the actual reference frequency. The reference frequency is divided
down to 5KHz or so, and to make much difference at that point would
require a very large jump to another frequency for the crystal. However,

the change at the crystal frequency, especially when multiplied something like three times means the VCO has to move up in frequency by that much in order for the signal at the output of the mixer (ie the input to the programmable divider) to be the same as when the reference crystal was unchanged.

In other words, if you move the reference frequency up almost 400KHz, the injection to the mixer is over 1MHz higher so the VCO moves up that much.

The trick in the old magazine articles was to uncover where the reference frequency is multiplied and fed into the mixer between the VCO and the programmable divider, and cut the signal path. Feed a new oscillator into that point.

This moves the VCO (and the rest of the CB set) higher without messing with the channel spacing. It also will not mess with the second conversion osciilator.

Oh, bullsh-t. If Hollingsworth was REALLY serious about cleaning up the bands, he would have busted WB2OTK, ND8V, AF2Y, KV4FZ, KT4TR, K4OAK, WA9KJI, K5BLB and W9ART a long time ago.

This enforcement stuff is a joke and certain frequencies are actually WORSE than ever.

Whenever you see these openly boasted about, forward it to
rholling@fcc.gov .

What I think is astounding is how CB operators insist that they be
treated with respect and viewed as legitimate. On rec.radio.cb we just
had an operator boast "it's legal unless you get caught." Is that a
creed?

The General Radiotelphone (or Radiotelegraph) Operators License is still required for some radio work. But not for the private land mobile (where police departments operate). You are required to have one to do any internal repairs or adjustments to a station in the marine or aviation service In the case of aircraft radios, you must also have an FAA radio repairman certificate if you are going to work on radios that are in an aircraft.

The private land mobile service does not require a license to work on the radios. The stations licensees are responsible for their station being within all applicable technical standard - but the FCC doesn't care who is actually turning the screwdriver.

Lucent isn't "trolling" ... I thought I might help a
fellow ham find an interesting, exciting job opportunity.

Sheesh ... like Hans said ... you'd complain if you were
hung with a new rope, wouldn't you?

Lucent's HR department IS working the opening. Like I
said, I just thought I'd try to help a fellow ham.

As for your stock portfolio, If you want to sell Lucent
stock, how many shares do you have to sell? I buy the
maximum allowable under the employee stock purchase plan
every month and all of my 401k goes into the stock fund.
(not to mention my options)

Mike ... the "ad" was for a tech, not an engineer ... and
because *good* techs are so hard to find, many companies
hire them through a contract agency for 3-6 months to see
how they work out before converting them to permanent
employees.

It gives BOTH sides a chance to see how things are going
to work out.

Don't know how to activate your filter?

Don't know how to skip over a post when the subject is CLEARLY
indicated?

I suspect your REAL problem is that you haven't the WILLPOWER to avoid
the very subject you CLAIM annoys you,

AND that you suffer the inner "need" to play "newsgroup censor"...

Is this a moderated group? If it IS, the moderator is capable of
controlling posts - if not, then let your conscience - and your
keyboard - be your guide.

As for ME, all private Email from those complaining about my posts
here on this and similar subjects, will be "deleted unopened"...

'Nuff said!

Hello all to all hams. Does any one how the antenna switching is done in the polaris marine Doppler. Their are only 2 data outputs on the back and I seen pic off the antenna setup for it and it uses 4 antennas. I have the Roanoke Doppler built and it uses 4 data outputs for the ant switching. Can anyone help me. Any info would help.

I made a comment, I didn't ask for anyone's opinion, including yours Gary. That's what's wrong with this world today, too many people sticking their nose into other people's business. And no, I don't know how to activate my filter, wasn't aware I even had one. But seeing as how you know it all oh wise one, how about "elmering" me on this subject. And then I could filter out your posts. And yes, I can skip over threads such as these, and I don't read them. But I have one question, what in the hell do boatanchors have to do with shooting people? You don't know anything about my Real problem, or my WILLPOWER, or my inner "need". And you really should have sent this post to me PRIVATELY, but seeing as you apparently have the "need " to waste NG space, it's fine by me. Go to Dejanews and see if there are any posts from me attempting to be a "newsgroup censor".
Thanks for setting me straight, Keeps Jacking 6 Queers.

They certainly are not going to pay attention to a complaint that is NOT valid identity!Plus, if you aren't brave enough to put your legit ID behind your complaints then
apparently your complaint is bogus.

Also, remember that this country is based on such principles as "the right to face the
accuser"! Or don't you believe in a democratic society?

> And don't give me that line about policing via peer pressure. That's a
> crock, because you don't even follow it - how

Since you have never successfully passed a amateur license test I wouldn't expect you
to know such things as self policing by peer pressure, a corner stone of amateur

that has been successful for several decades.

Carl,

What's the average starting wage for an RF tech at Lucent? Good techs may be hard to find, but it also seems that the average wage is rather low for a "high tech" position.

I realize that this is partially due to the fact that many techs are non-degreed, having gained their experience at a vo-tech school or through the military.

Most CB'ers are too damn busy talking to shut their mouths long enough to learn anything about radio communications, especially amateur radio. They'd rather listen to the sound of their own voice for eight hours a day (or night) instead of using the enery they expend jaw jacking to study to get a ham license.

"Where's all the RADIO CRYBABIES?"
"I wanna hear 'em TALK TOUGH!"

GEEZ! What a jackass response! Our Russian ham friend was looking for some simple information, and you flamed him! Still fighting the Cold War or something? He DOES have a license by the way, and if you'll look at his post again, you'll see that he's placed his HAM CALL SIGN, UT0IY, at the end of the post. If YOU were a real ham, you'd recognize that! I am embarassed to be a US ham, if you're the kind of colleague that I am to be associated with! I think you owe him an apology, you brainless boob!

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

>From the Editor's Desk:

We have had a real explosion of new subscribers this week. Some will go on this week's Newsletter and the rest will appear next week. Had a lot of fun seeing friends at the APCO Conference in San Diego last week; I was also able to take a few days off on vacation. Some of our new subscribers are asking for specific information; if you can help, ple ase feel free to email them and lend a hand. Congratulations to ACS Inland Region Officer Bill Pennington, whose 'Why Some Units Fail' article was published in last week's Washington State EMCOM Bulletin. And, if you're keeping track, there was no news letter last week.

Stay safe, everybody; see you next week! Dave Larton, Editor

.....

Please Welcome:

Bob Ferrey Jr. N3DOK <n3dok@pgh.net> Pittsburgh PA
I am the ARRL Emergency Coordinator for Allegheny County, Pittsburgh PA

Greg Greenwood KH6/WB6FZH - WB6FZH <greg6fzh@aol.com>
Kaneohe, HI Weaverville, CA
I hope to use the additional information from your newsletter (receive it 2nd hand now..from time to time) to provide information to Clubs and Individuals. I also maintain a couple of Websites for Amateur Radio, one with an Emergency Communications section. Thanks Greg

Andy Trautner <Ctrailer@aol.com> Rancho Mirage. CA
Logistics Officer for the Riverside County of the American Red Cross. Also a member of Crest REACT

Bill Miller KJ7GQ MARS NNN0ELF <billmiller@sistersnet.com>
Sisters OR
I am currently the ECOM guy for NAVYMARCORMARS in OR. Was forwarded a copy and liked it. Particularly impressed with the mature, reasoned response labelled to EMC 174 No ID issued. I have been an ARES member for 25 years, held a lot of jobs and recognize experience when I see it. I will quote that liberally in the near future.

Glenn West/KD6DUX <gwest@c-zone.net> Redding, CA
I'm interested in all forms of emergency communications, and preparation. I've been active in ARES/RACES since 1994.

Jerry Zink KB2ZJI <reilly@midtel.net> Schoharie, NY
Hi my name is Jerry Zink, I am the RACES Radio Officer for Schoharie County New York. We have an active RACES Organization as well as SKYWARN. As radio officer, I'd like to innitiate a training program, because we have a lot of new members who aren't sure what RACES is all about. I saw your bullitin on Packet Radio, and discussed this with my director of EMO and would like to find out more information on a training program type setup. Anything you could send would be appreciated or let me know where I may obtain the same. Your state seems to really have it together on Emergency Communications. We are quite impressed. Thanks again.

William (Bill) Gietzen <WA8HDG@aol.com> Norton Shores, MI

Harold A. Larsen N7DOI <clhalars@aol.com> Post Falls, ID

Mike Johnson KJ7RJ <kj7rj@uswest.net> Shoreline WA
As the manager of the City of Shoreline ACS team I find it a challange to keep the current membership interested and attract new members. With the lack of natural disaster's it is important to keep abreast of the newest and latest training programs and methods to present to my team. I have found this newsletter to be a great help in sharing ideas. I am interested to know if there is any ICQ chat centers dedicated to ACS/ARES and or RACES where people could go online and discuss real issues and ideas in real time. Thank you for the information you provide in each newsletter.

E. David Barker <dbarker@cyberg8t.com> Rancho Cucamonga, CA
Deputy Commander, Civil Air Patrol, SQ25
and ham radio operator.

Harold Witten/KF6TQM <wittenhj@gte.net> Palm Desert. CA
I'm retired from a Aerospace group. Have recently joined a
local R.A.C.E.S group in support of County Fire and Emergency
Operations. Also looking for a four wheel drive Search and
Rescue Group to join in the local desert area.

Rick Harrison / VE3YRH <ve3yrh@rac.ca>
Oakville, Ontario Canada
I seem to have gotten unsubscribed somehow, so this is my
attempt to solve that problem. I have been an amateur radio
operator for going on 10 years now; I hold a Canadian advanced
license with 12 wpm code endorsement. I have been involved with
both amateur and non-amateur radio groups providing both public
service and emergency communications for more than two decades.
I have also participated in marine Search and Rescue for almost
the same amount of time.

Ronald J. Janus <rjjanus@aol.com> Long Beach, CA
Alamitos Beach Neighborhood Association CERT team.

Harry Schriebman KF6JQI <schriebman@pacbell.net>
Corte Madera, CA
General license, member of Town Disaster Council, member of
County Disaster Council
.....

>From the Mailbag:

What about Y2K? It's turning into a moving target. Predictions
are constantly changing. Local, state and federal agencies are
each coping with the problem as it relates to them, but the
issues do continue to change. We do know this. Agencies are
advising people that they should plan for Y2K the way they would
plan for an earthquake (no, the ground isn't going to move!). 1.
Everyone should have at least three days supply of food in the
house. 2. Have some water in sealed containers (at least a
gallon per day per person). 3. Have some extra cash on hand.
Don't get large quantities of it. Just have the amount on hand
that you would spend normally during that same time period
(instead of using your credit cards). 4. Make sure you have some
gas in the car. Don't store large quantities of it in your
garage or house. Just be practical. 5. Make sure you have a
flashlight, batteries and a portable radio that works. 6. DON'T
wait until the last minute to think about these things. It's
very possible that your neighbors will wait until the last
minute to buy food, gas, flashlight batteries and the like.
They may, in their panic, create long lines and needless
shortages

Whether Y2K is real or imagined, we can expect some problems. Consider, for example, at midnight (and times thereafter) it won't take many people to pick up the phone to hear a dial tone for the telephone system to become hopelessly choked. If too many people wait until the last minute to do their panic shopping we'll have real shortages. If everyone waits until New Year's eve to buy gasoline, we will have long lines and shortages.

So common sense dictates that for the next year we need to stay informed, stay calm, stay prepared and keep our radio batteries charged. It isn't the end of the world.

-- Bill Peirce, KE6FKS
District Emergency Coordinator

(From the The San Luis Obispo County Emergency Communications Council Newsletter)
.....

Current Events:

APRS EMERGENCY CALL BRINGS HELP

When Scott Ratchford, KC5JGV, witnessed a bad accident during a snowstorm on Pennsylvania's I-76 recently, he immediately grabbed his cell phone and called 911. When that--and several other possible combinations--failed, he tried an emergency call on 2-meters. Again, no luck. Two people were trapped inside an overturned vehicle, and Ratchford was getting desperate. "Here I am in the middle of who knows where, a huge snowstorm, a serious accident, folks needing help, no one answering on .52!" he said in a March 8 posting about the incident on the APRS Special Interest Group. "So, I switch the MIC-E to 7, and hit the button." This sent an emergency mike-encoder signal out over the Automatic Position Reporting System.

Ratchford's emergency beacon was spotted by several stations who immediately contacted the Pennsylvania State Police. But the cops "don't do latitude and longitude," said Dan Velez, W4DJV, in Virginia, one of the stations monitoring the call. Clay Owen, AA3JY, in Pennsylvania, had better luck. He also called the state police and was able to give them references to exits and route numbers, thanks to APRS+ and the Delorme Street Atlas. "I also gave them the name of the individual to be contacted, thanks to QRZ built into this program," he reported.

APRS developer Bob Bruninga, WB4APR, was among those noting the emergency call in the Pennsylvania-Maryland-New Jersey area. Bruninga notes that APRS-DOS will display the nearest mile marker on interstates but "apparently I missed I-76 in the database."

Unknown to Ratchford, the message was received and understood. "Little did I know that the APRS message was received, as a trooper had arrived within minutes of my transmission," he said. Only when the trooper asked for him by name as he was about to leave did Ratchford learn that APRS had delivered the message and that someone had called the police. "I left the scene feeling very happy about our hobby and especially our interest in APRS," he said. (The ARRL Letter)

What's New on the Web:

PENN STATE OPENS NATURAL HAZARDS CENTER

Penn State University has established a new Natural Hazards Center. Founded under the premise that natural hazards cut across social, cultural, and economic barriers to profoundly affect life on this planet, the center brings together a diverse group to develop and implement cross-disciplinary studies in hazard evaluation, forecasting, and mitigation. More information on the new center is available from the center Web site: http://www.essc.psu.edu/hazards, which includes historical regional disaster information, as well as lists of upcoming center colloquia and university disaster courses. Interested persons can also contact the center director, Kevin Furlong, e-mail: kevin@geodyn.psu.edu.

-Disaster Research

STORM DISPLAY WEB SITE

Through a partnership with NASA and FEMA, NBC4 WRC-TV in Washington, DC, has created this Storm Display Web site, a real-time weather display system that shows all of the valid National Weather Service watches, warnings, and advisories. Earthquakes are also plotted when they occur. By April, the site will include highly detailed hurricane and tropical tracking information directly from the Tropical Prediction Center (TPC) in Miami.

http://www.stormdisplay.com

-Disaster Research

KING COUNTY OEM Y2K SITE

This site provides a brochure put together by the King County (Washington) Office of Emergency Management. It provides basic information for the public about Y2K and its potential consequences in various sectors and about the county's efforts to mitigate those problems, along with general preparedness information.

This week's EMCOMM Bulletin:

EMC176 Can We Talk?
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC176 Can We Talk? For release 3/22/99

The need to talk to key personnel in any situation
is the very essence of management. Without that ability
an entire organization, agency or jurisdiction can flounder
into total disruption when essential communications are lost.

A failure of essential communications systems can be a
disaster in and of itself, cutting off vital and essential
activities.

Managers know this, but in the frenzy of day-to-day
events seldom get the time to move aside a few steps and
take a good hard look at the situation.

Communications are essential for managers to manage an
organization, whether it be private or public. While good
practices and policies, along with "what to do if" instructions,
can guide an organization through short periods of the loss
of essential communications, it is not an indefinite solution.

Besides the obvious need to communicate decisions relative
to the agency or organization, there is also the need to help
assure families and keep off-duty employees informed.

Here are some items that can help managers review this topic:
1. What are the every day functions performed by the various
voice and data communication systems now in use?
2. What is required to support them?
3. Which systems or functions are so transparent that they
could easily be overlooked?
4. What if some of these become inoperable?
5. How will that affect your operations, agency or firm?
6. What procedures exist to restore inoperative forms of
communication?
7. What if, however unlikely, ALL systems fail? What then?
How will you communicate? (No, that is not a play on words.
What if ALL existing systems fail. What then?)
8. It is at this point that one gets to the essential needs:
a. What functions are required in what order?
b. What alternative means of 'communicating' exist?
c. Decide on a backup form for each essential function.
9. The next step is often the most difficult: What beliefs

and inherent concepts have been inadvertently assumed
about your organization, your systems and your own
understanding of it's needs?
10.In regards to item 9, it may help to mentally place
yourself in a chair opposite of you and challenge yourself
as to your own assumptions and ideas. (This is a method
that is used in other ways, but can be applied in this case.)
If you can conceptualize this form of going outside of your
own thought process by a form of visualization, it can give
astonishing and beneficial results
11. Prioritize all communications. What should be restored
first? Why? Second? Why? Etc.
12. Establish procedures to restore systems. Do this as soon
as possible, while there is the opportunity.
13. What procedures exist for the 'chain of command' in the
organization or jurisdiction? Look beyond the obvious into
the "it can't happen here" aspect. It can and does happen.

To subscribe to bulletins, use the Subscription Services
web page at <http://acs.oes.ca.gov/subscribe.html>. If
you don't have web access, just send an e-mail message to
<mailto:emcomm-bulletin-sub@harthaven.com>.

6969. EMCOMM Bulletin for 15 March 1999

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-24 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7d9ov4$rtq@news.Hawaii.Edu>
Source record: 147351
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

The EMCOMM Bulletin for this week follows:

EMC175 A Units Year in Review
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC175 A Units Year in Review For release 3/15/99

Each EMCOMM unit (whether ACS, ARES, RACES, REACT or some
other designation, type or organization) has a need to
develop training and involvement opportunities for the
participants. Each unit will have a uniqueness and
way of achieving both of those goals.

What we present from time to time is an example of what some
units have done. In doing so it is our hope that ideas may be
generated that can help in another unit's needs. So, let's look
at the City of Huntington Beach RACES '98 activities review:

January - March: Provided Antenna Connectors in the EOC

March: Orange County Disaster Drill - Red Cross

April: -Walk America, where the unit provided mutual support
for the March of Dimes Walk America. Supplied field
personnel as well as a net control operator.
June: -County wide drill hosted by Orange County Races -
part of the National SET Drill
-Mayor proclaimed Amateur Radio Week
-HB RACES Field Day (2E contest stations, tested
equipment to provide field shelter communications for
7.0 earthquake. 7 Training Stations; tested Emergency
6' Helium Balloon Lighting System used in the Keoto,
Japan Earthquake. HB RACES supported the CERT
Earthquake Shelter Drill, Partner in Disasters
-Training goals/accomplishments:
-Tactical Command Trailer-radio positions/on board power
-35 HB RACES Certified Control Operators
-ATV Training
-APRS Training
-Solar Net Control Training
-Solar RV Systems Installation
-Packet Stations Training

-Outbound traffic to LA Cellular O.C ham station 20 miles
using ht. simplex only.

July: 4th of July Parade and Fireworks. Fewer lost children and
medical emergencies that the previous years. "The high-
light, aside from the parade, was probably the flooding
from one of the rest rooms along Main St. Like all other
emergencies RACES handled it well."

August: GTE Championship Equestrian Event:

September: School Drill Program. First time that Net Control
certification techniques put into practice. "Discovered
a few areas that need modifying both as to handling traffic
and routing of messages through the EOC.

October: Running for the Birds. "A delightful day at the beach
providing communications; helped the timers know who was
in the lead, when the last runner passed, etc.

November: -La Palma Days Band Review and Parade "Watching Scotty
Grow".
-County Election Ballot Box Collection and Communica-
tions: provided communications and documentation of
ballot boxes collected and shipped from 127 Precincts,
the second largest voting area in the County.

December: Loma Ridge EOC Tour; learned how and what Orange County
(OC) RACES does in an emergency in our County. Also
learned how "we fit" in with other RACES groups in the
event of a major disaster.

From "A Year in Review - 1998" from the Huntington Beach RACES
Newsletter, Vol 6, Issue 5, 12/98.

Karl Malden has repeatedly denied any connection between his nose and
the white supremacy movement. If you wish to pursue this line of
questioning, you should consult his solicitor. Hope this helps.

I seen that the new g707a does get father on receive than the V7a.
Kenwood has the mod for the G707a at their web site and I took a look
at them. The boards where the mods are performed are as far as I can
tell very similar. If it weren't such a pain in the ass for me to get
my radio uninstalled from my car, i'd perform the 707 mod on my V7a
just to see what happens.

<<the FCC has a lot of catching up to do for their years of enforcement neglect, so we may have to wait awhile before these radios are either taken off the market or better controlled>>

As a point of interest, I've just learned about a new phenomenon called a "KEYDOWN". Apparently this is the CB version of a "showdown", where people come from all over the country in order to see who can generate the loudest QRM.
Two vehicles (usually vans) each equipped with CB radios and illegal linear amplifiers, some running in excess of 10,000 watts output (No that's not a typo, I said TEN THOUSAND WATTS) are matched against each other. Upon a signal given by a referee, both parties "key down" and shout obscenities into their microphone. A designated "judge" tuned to the channel and stationed several miles away makes a cassette recording of the result. The tape is brought back for the parties to listen to and argue over who was loudest. If any clear agreement is reached as to who is the "winner", some sort of cash prize is given.
This is a no-brainer, even for the new, underfunded FCC. All the enforcement bureau need do is send an officer to one of these (regularly scheduled) events to hand out fines and confiscate equipment.

I agree, It has changed, I was lucky to have an elmer too,and
for the most part, it really isn't that bad. People are generally good and
they generally behave well. There are a small minority of lids that hangout
on all of the bands (and yes 75 is the worst) the only consolation is that
75 isn't open 24 and 7.

The changes in ham radio are merely a sad reflection of our changing
society, and as far as anyone can tell societies change and no one can stop
them. Progress isn't always positive!

SNIP

Blake -

People in numerous newsgroups & e-mail have stated in a common thread their dislike for your actions here on the internet & have said "complain about Blake Bowers"! It is time for you to stop all your needless spaming & stop all your harassment. You have stated your dislike for some of my posts also, so I suggest you & I BOTH simply STOP these actions together.

YOU, BLAKE BOWERS, now hold the ability to END all these problems that you have requested, including the cross-posting to alt.firefighters. You can use this to achieve better- ment or not as you chose.

Your actions, BLAKE BOWERS, not your words, will indicate your choice.

Otherwise, we will be forced to forward complaints of your behavior to the following: abuse@townsqr.com sharen@townsqr.com ztrow@townsqr.com support@townsqr.com

and his upstream at
abuse@uunet.com

Paul, such a rude response!

But the apology speaks well of your character--most would not have had the courage to type it. Let's see if we can help this guy (or his radio sport club) out in simple English:

Okay Vostok-Radio, the conversion involves changing the reference crystal in the phase-lock-loop (PLL) circuit to the part you are interested in moving to in 10M. In North America, most AM activity is 29.000 to 29.100 MHz, sideband is from 28.300 on up to 28.700 or so. You can also frequency shift the carrier and operate in the FM portion of 10M from 29.400 to 29.700, but this is a slightly harder modification unless you have one of those FM CB radios that are built for overseas markets. A company named Melco used to offer a kit to make an FM conversion of an AM CB radio that was pretty easy to do. After the PLL's xtal is changed the reference voltage must be adjusted. Harder to figure out is the band-pass filter that comes after these oscillators. The new frequency will be attenuated if this is not changed. Usually it involves just changing a simple capacitor or inductor or two.

The hard part to all of this is understanding the theory behind PLL's and in finding a circuit diagram (schematic) since they are not usually published by the manufacturers and there are so many different models that have been sold. There is a CB web page that sells service manuals for CB repairmen that may help. Try

http://www.cbcintl.com

or just keep asking on these newsgroups if you have more specifics of the circuit you are working on. In the 1970's an American magazine called '73' published many articles on CB conversions. I'm afraid that I am not going to be much help. It has been 15 years since I did my last conversion and I cannot even find my notes.

If you are going to operate illegally, be sure to work from 27.5 to 28.3 MHz, always overmodulate, add echo effects if you can, and try to speak a very fast Spanish or Portuguese so that you blend in with the other operators I usually hear there. Just kidding!

Good luck,

-- John (N0BUP)

shouldent you be saying this kiend of harsh thing on a cb newsgrup?
and anyways hams doent go overceas and get involvied in a civil war.
that wouldent be rite.

Good grief Paul,
One must assume that there is some history of conflict between the two of
you, for you to start ranting away like this.
What an interesting way you have of conveying the spirit of Amateur Radio.
(sarcasm was never my strong point)

Alan

6999. WTB: 1961-63 Callbooks - Sell or Lookup

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-24 00:00:00 UTC
From: John Wunder <jwunder@SPAMNOTclr.com>
Message-ID: <7dap0q$3v9$1@news.onramp.net>
Source record: 147381

Want to purchase Callbooks or request help determining my original Novice call from one of these Callbooks. I think I got the license in 1961 or 1962. Not sure how long a Novice call (expired in one year) would remain in the callbook (maybe two years?). Please send email (remove SPAMNOT) if you have any of these for sale, or if you would be so kind as to search the callbook for my name in the WN9 section (about 15 pages, the WN9's are mixed in with the other 9 prefixes) for this listing: (thanks for any help!)

peopel have been asking nice for the bad (and even eviel) langage to be
stopped. it is bad enuf on 14.313 gigahurtz without bringing it to
bare on this newsgrup.

I gave up the bad langage and maybe being cross and posting
(crossposting). can you due the same?

I realy like them zenor diodes but you dident mention that you had any.
I was just a little kid back when zenor inveinted them things and they
brieng back good memories. It was one of the good things to coem out
of Russia.

What does flames about guns have to do with ham radio?
the nra is pro-gun , I am pro-gun. the gun grabbers want to remove all
gun from us.
still wrong place to flame

Group,

I am searching for a "new in box" and or "excellent condition" used Yeasu FS-10 "Smart Controller" Microphone, also known as the "Potato Head". This microphone was used in the FT-8500 Amateur Dual Band Transceiver, which is no longer in production (as is the microphone).

Please e-mail me your asking price as well as microphone condition to:

auctionbargains@webtv.net

Best Regards,

Joe Mattern, WW4WJD
Orlando, Florida

I'm curious to as which CB's would make the best subjects for conversion. I know that it would be better to get one w/SSB (who does work w/AM?), but I'm more curious about what models work best. After, why pay $100-200 for a real 10m radio when, if I spend $20 bucks for an old cb and do $10 worth of mods, I can have something that does the trick?

Not to be too simplistic - but - you accept a job in RF engineering. :)

RF engineering is a good field because most students are lured by the computer world. (Not as many RF people.) Having an amateur license will help, IF you also know and have been playing around with the circuits. The hard part is getting started without previous experience. Ham radio can give you that edge if you've been building your own stuff etc.

: I've been studying electrical engineering for four years
: now, and I'm starting to look ahead to entering the job market.

After four years, I'm sure you have already considered something along the lines of my first sentance. :)

A good first step;
Look in any issue of "RF Design" magazine. (Lots of job offers.) Their sit is; www.rfdesign.com

Hey guys I got to tell you about this one. I was South bound on Georgia State road 106 on my way to work. I was listening to WROQ 101.1. Greenville SC (This radio station has got to be the coolest radio station in the contry, deep album cuts lost classics. Nothing but what is known as classic rock very little new stuff BUT mostly classic rock) Magoo's road house is the name of the show. Its your typical request show. Guys comming home from work 5 to 8 radio show. It was about 7ish and I'm on my way in and low and behold much to my suprise out of MY FM radio comes this famous amteur radio saying Where's Porkbut! I about wrecked my Lincoln laughing so hard. So guy called in the Magoo's radio wanting to know where's porkbut. He must be famous in Greenville SC.

Hey, wait a minute! I have held a amateur license for 18+ years and I don't know how to convert a CB to 10M. Actually I have just started using 10M mobile and think it is great fun. I want to put an inexpensive radio in my Jeep and I would appreciate learning the answer to this question.

BTW: He did sign his message with his call, UT0IY.

> Jim Rosenthal, WA4STJ

Yeah, I haven't started looking seriously yet, (I graduate in December)
but most of the ads that I see for engineers either ask for a) 2-5 years
experience or b) 3.5 or better gpa. Now, this may or may not be the
real story, but that's just what I've seen in the quick looks that I've
given the subject.

My senior project is to build an 80m cw transciever; so far, I've been
working on a crystal filter and a dds (w/a pic controller). In the near
future, I'd like to expand my microwaves course a bit and actually try
to communicate across my campus somehow in the 1.2GHz ham band w/some of
the other amateurs on campus. I might even take the spring semester
after I graduate to do some odd jobs on campus so I can bum around and
use the really nice test equipment we have here to experiment some and
further my knowledge of RF. I'm hoping these are good steps in the
right direction.

: Not to flame, but how does one go about entering into the field of RF
: engineering?

Not to be too simplistic - but - you accept a job in RF engineering. :)

RF engineering is a good field because most students are lured by the computer world. (Not as many RF people.) Having an amateur license will help, IF you also know and have been playing around with the circuits. The hard part is getting started without previous experience. Ham radio can give you that edge if you've been building your own stuff etc. And think about this, your going to get paid to learn more about the technical side of your hobby!!

: I've been studying electrical engineering for four years
: now, and I'm starting to look ahead to entering the job market.

Hope you took courses in the RF area. After four years, I'm sure you have already considered something along the lines of my first sentance. :)

A good first step;
Look in any issue of "RF Design" magazine. (Lots of job offers.) Their site is; www.rfdesign.com

>Then why isn't he using his Kansas address?

He doesn't have to. The FCC only requires that we maintain a mailing address in which we can receive correspondence from them. That's one of the major faults with the Vanity Callsign farce. The Pacific Island call area (Area 13) is being depleted of its callsigns due to PO Box schemes. For example, of the 200 Hawaii Extra Class callsigns, close to 10% have been sucked up by Mainland clubs and individuals. I've reported this to the FCC hoping to get those callsigns cancelled and returned for Hawaii hams.

Anyway, as long as someone is at his AZ address and able to forward FCC mail to him, he's free to live anywhere.

HIRAM, GA: The FCC has sent a Warning Notice to General licensee James V. O'Brien III, W4AMP, indicating that he or someone using his call sign was "deliberately interfering with and jamming radio communications" on 75 meters. The FCC said its information indicates that O'Brien, 36, was coordinating on 2-meter FM with another station, KE4KXP (Charles W. Parris Jr, now K4JMZ--see below), to interfere with stations on various 75-meter frequencies. "Such operation prevents the legitimate use of the frequencies by others," said the FCC's March 15 letter signed by Riley Hollingsworth, K4ZDH. Hollingsworth warned the licensee that further such operation could result in a formal proceeding "to determine your qualifications to hold an amateur license" as well as a fine. The licensee was asked to contact Hollingsworth to discuss the situation.

SMYRNA, GA: The FCC has sent a Warning Notice to General licensee Charles W. Parris Jr, K4JMZ (ex-KE4KXP) indicating that he or someone using his call sign was "deliberately interfering with and jamming radio communications" on 75 meters. The letter March 23 from Riley Hollingsworth, K4ZDH, said that FCC information indicates that Parris, 38, was coordinating on 2-meter FM with another station, W4AMP (see above), to interfere with stations on various 75-meter frequencies. Hollingsworth's letter said that "no enforcement action is contemplated at this time," but said that additional incidents could lead to formal proceedings and a possible fine. The licensee was asked to contact Hollingsworth to discuss the situation.

Getem Riley! Sickem! They have it comming to them! Why would Riley need to warn them they were doing what I like to refer to as organized jamming. Boy I would of loved to be a fly on the wall when old pig vomit got this one.

>UT0IY

Hello OM,
I've successfully converted two synthesized CBs to 28 MHz for CW operation. The first radio was converted by removing the 10.240 MHz PLL reference crystal and replacing it with 10.635 MHz crystal I chose that frequency for no other reason than it was the first one to fall out of the junkbox! It was a good choice, for now Channel 1 is at 28.005 MHz.

The second CB was converted only after I had studied how PLL circuits work so as to learn how to re-wire the 8-bit binary-coded decimal (BCD) programming scheme.

I highly recommend the first method!

Keep in mind that if you change the crystal to get the radio up to 29 MHz, the crystal oscillator will need to be aligned, as will the RF stages.

Hope this helps!

> minute or so, with each antenna getting better or worse in turn.

I am deliberately comparing the GAP vertical only to full size monoband verticals, because they are easy to model and have well understood patterns. I want to avoid the complexity of phase differences, and the height of a horizontal antenna. i.e. I'm trying to isolate the experiment as much as possible - apples to apples, and avoid the vertical vs. horizontal debate. However, since I will be comparing to a modeled antenna, one could estimate an elevation pattern for the GAP which could be compared to THEIR dipole at THEIR QTH.

>
> Set up a simple SPDT switch so you can instantly switch between the

I will be using an Ameritron remote coax switch to instantly change from one to the other. Yes, they will usually be closely matched (both well under 2:1 SWR), otherwise I will compute the difference in line losses.

>
> I don't have a good rule for spacing two antenna to be compared, but

> significantly affect results. Your measurements won't be valid if
> there's significant coupling.

The ground will be identical for both antennas, since they will be placed over salt water which I assume to be homogenous.

They will be spaced about 100 feet apart, and I have modeled the interaction. I plan to either severely detune or ground the unused

antenna. My modeling shows less than 0.5 dB of pattern distortion will result, with the grounded model providing less distortion than detuning. Any further comments here would be most appreciated.

My plan was to have the step attenuator in line with the stronger antenna, then switch back and forth adding attenuation until the signals are of the same strength. I will of course maintain the same receiver settings. The attenuator is a new MFJ762. They provide accuracy specs, so I don't plan to have it commercially calibrated.

I plan to log each contact by call sign, and later record its bearing and distance. I will date and time stamp the entries and note the solar conditions. As mentioned above, ground is assumed to be homogeneous. Another good reason not to compare verticals and horizontals.

Don't want to smoke the attenuator by transmitting <grin>

> I'm looking forward to seeing your results!

Thanks, I will post and/or publish them as they become available. I will also include details on the methodology. Perhaps this will provide a conclusion to the great GAP debate. Hopefully people will start to evaluate
other antennas in a rational manner.

Mars/Cap mod for Kenwood TM-V7A

Remove the top and bottom covers and the detachable face holder.
Look at the pc board that is vertical behind the front of the radio.
There will be
2 small chip resistors on the left side of the board. Carefully remove
the one
with the number 0 . It will be the one closest to the left near the
grounding
spring. You will probably have to scrape it off with a pair of needle
nose
pliers.

After you remove it the TX should be VHF TX 136.995 - 173.995. RX should
be 118-174. UHF TX should be 410-469.995 RX should be 300-470.

Jarrod Boehme wrote:

Howdy,

Our Beacon Wizard, KCal, Sked Wizard and Active Beacon Wizard ++ apps all display your local time along with UTC. However they don't display it in the task tray.

You can download these from our web sit at the url below. Look for the link to "HamTools".

Fred Hamilton wrote:

(This is for Netscape 4.5 and later only--
Other news readers will work in a similar fashion to this.
I don't know Internet Exploder and
hope you MS fans will provide the much-needed primer.)

Although I clearly didn't want to start a thread, I'm responsible
for a big, off topic one. This is my attempt to help
people who either cannot or will not simply ignore
posts they say they don't like, be they off topic or auction.

This primer will show you how to "filter" messages so that
you never see them and are therefore not tempted to "click"
on them. I do this to filter out posts about YaeComWoodies,
about which I have not the slightest interest.

1. Open your news reader. Select the newsgroup you want to filter.

2. On the upper tool bar, click on "Edit."
Select "Message Filters..." from the pull-down menu.

3. Click the "New" button. This will open a window called
"Filter Rules." Give your new filter a name.

4. Examine the boxes. You have many options to delete, mark
or otherwise automatically handle message from selected
persons or about certain subjects. For example,
you can tell your new filter to delete any messages
from "CBSambo" or "the cuban." You can also send
all auction messages to a special folder by filtering
for "FA:" or "ebay."

5. When finished building your filter, click "OK."
Restart your internet software and your new filters should
be ready to remove your temptations.

You can create multiple filters for each newsgroup if you wish.

I hope this is of some help and invite others to write short
primers on how to do this for other news readers.

Kind Regards,
David Stinson

Tom OM,

EXCELLENT POST! I also cannot understand why ops pay hundreds of
dollars for antennas. But the fact is, they do, and always of course
the manufacturers are happy to take their money... The older I get, the
more convinced I am that P.T. Barnum knew what he was talking about.

Once again I've inundated with request for the Pete Hart review.
Instead of Email each and everyone requesting a copy of the 3 page
review (1.7meg file) I have posted it on the Web. To view it go to:

http://www.sanasys.com/~kingpop/gap.html

Also in my digging around in the file cabinet I Found a copy of a
review that was published in the French Magazine "Megahertz". In it
Dick Bird Published MINI-NEC4 models for all the Bands a GAP Challenger
covers. I will try to have them up on the page by the weeks end. Once
again this backs up what I have been saying.

Additionally I would like to put out a request for anyone with adverse
experience with a GAP to email me detailing there experience. I will
put them on the page in "testimonial" section

I apologize for the down load time of the page. Due to time constraints
I had to put full (scanned size) jpg files on the page. I will work on
whittling that down also as time permits later this week.

HIRAM, GA: The FCC has sent a Warning Notice to General licensee James V. O'Brien III, W4AMP, indicating that he or someone using his call sign was "deliberately interfering with and jamming radio communications" on 75 meters. The FCC said its information indicates that O'Brien, 36, was coordinating on 2-meter FM with another station, KE4KXP (Charles W. Parris Jr, now K4JMZ--see below), to interfere with stations on various 75-meter frequencies. "Such operation prevents the legitimate use of the frequencies by others," said the FCC's March 15 letter signed by Riley Hollingsworth, K4ZDH. Hollingsworth warned the licensee that further such operation could result in a formal proceeding "to determine your qualifications to hold an amateur license" as well as a fine. The licensee was asked to contact Hollingsworth to discuss the situation.

SMYRNA, GA: The FCC has sent a Warning Notice to General licensee Charles W. Parris Jr, K4JMZ (ex-KE4KXP) indicating that he or someone using his call sign was "deliberately interfering with and jamming radio communications" on 75 meters. The letter March 23 from Riley Hollingsworth, K4ZDH, said that FCC information indicates that Parris, 38, was coordinating on 2-meter FM with another station, W4AMP (see above), to interfere with stations on various 75-meter frequencies. Hollingsworth's letter said that "no enforcement action is contemplated at this time," but said that additional incidents could lead to formal proceedings and a possible fine. The licensee was asked to contact Hollingsworth to discuss the situation.

Getem Riley! Sickem! They have it comming to them! Why would Riley need to warn them they were doing what I like to refer to as organized jamming. Boy I would of loved to be a fly on the wall when old pig vomit got this one.

It has been discontinued, so if you can get one now, do so! They are supposedly going to replace it with the HTX-200 in May, and also, the 440MHz version (HTX-400) will be out later in the summer. The new radio is going to be roughly half the size, but similar electronic design.

It doesn't seem that many years ago that my friend, Wes Hayward W7ZOI,
was chuckling about a fellow he had worked who said he was using a
"homebrew vertical". It was truly laughable at the time.

Now a homebrew vertical, or even dipole, is so unusual as to be truly
noteworthy. How times change.

. . . . . yo Squiggy-Poo . . .

While I'm unalterably opposed to your position(s) on the ham radio code tests and your techo-weirdo-geek elitist bullshit wrt to what ham radio would be like if you were Emperor I gotta go to bat for you on this one.

Your post was an honest and forthright annoucement of an available slot for some kindred RF-oriented ham to fill at Lucent. Where I come from that was a good deed.

Now lookit all the freaking flame and nit-picking bullshit.

I wouldn't actually wouldn't wish it on anybody, but what these ungrateful dweebs really need is their first pass thru a major economic downturn wherein they have no clue how they are gonna make the next payments on their new SUVs and their outlandish mortgages and forthwith complete their "educations".

It will be interesting to see how they react to posts like yours when that crap goes down . . it's gonna happen, we can put that in the bank right now.

. . from one very senior engineer who has been there to another . . .

Idiot, you're doing it again. Not content to have cross-posted a message that had nothing to do specifically with amateur radio in the first place, and seen it turn ugly because it had nothing to do with amateur radio, you are now cross-posting a second time because you didn't like people criticizing you for doing it in the first place.

I have a choice whether I want to read political diatribe. I can very easily find plenty of newsgroups set up for that. I choose not to. I expect to not find them in the amateur radio newsgroups, especially when the threads ignore the fact that not everyone here is American.

I shouldn't have to filter to keep your junk from my view, because I've made the decision to not read it by not reading the newsgroups where it belongs.

Why don't you just stick to rec.radio.swap and sell your junk there, instead of turning newsgroups intended for discussion of specific amateur radio related topics into your personal advertising space. Since you have no consideration for that in the first place, I'm not surprised that you'd think nothing of posting your off-topic political junk here.

The right to have a gun can be very practical here in the wild west. After the recent infamous O.J. trial, when the L.A. riots started, the cops just backed out and abandoned the citizens. Those with guns got some respect and saved their businesses. Those without were burned out...

Your expectation of "overnight" results reminds me of what happened to a friend who was driving the carpool to work one morning. The rules were simple. The driver for the week picked the starting time, and the driver also paid any tickets.

Wayne was driving a bit too fast and got pulled by a trooper. Of course, all the guys in the car were giving him a hard time while he waited for his ticket. To make matters worse, this was in Texas (where, when you see a motorist pulled, you speed up because you know the cop is busy).

Wayne was getting aggitated. As cars sped by, he asked the trooper, "What about THAT son-of-a-bitch?" and "What are you gonna do about THAT son-of-a-bitch?"

"Take it easy, Sir," replied the trooper. "One son-of-a-bitch at a time......"

Hi Jr,

Lack of education is hard to cope with. However, as long as you do not realize that the first military bombing of an open - read: undefended - city occured in the Netherlands, May 1940: the city of Rotterdam, the discussion ends. That sort of warfare will not be opposed by hunting guns. I might mention the Grebbeberg as well, look it up. Or ask me for details.

Sorry, group, I've laid low for days, waiting for the sentiments to blow over. But frankly, I've had it with the half-educated nonsense here.

Hi, D.S.,

1) The Low Countries, as you put it, are a rather strange combination of both the Netherlands and Belgium. Two different states. that fared differently in the second world war. We share a language - Belgium has also French and German. Nothing more.

2) 'Scuse me?

> Right on!.....and look what happened to the Low Countries in '38 thru '41.

Both Belgium and the Netherlands were invaded in 1940. The Germans were expelled from both countries in 1944 and 1945.

> Some people never learn!!!

How very true...

Sorry group, but I've taken all the abuse I could. Laid low for days, but some people just have to voice unfound opinions.

Kind regards, Wammes Witkop

Dear Gerald,

Do I understand correctly, that freedom means no comment at all could be allowed? Free speach only to those of American Blood? Otherwise, you wont't buy Tulips anymore? I don't give a hoot wether you buy tulips, honestly. But I do know, I'd like to present you with some. Only where... Oh - here's the clue: butt. Bend over. They'll stay fresh longer...

By the way, it seems you did forget quite some other nations involved in WWII. English, French, Greeks, Polish, Soviets, even Dutch. To name some. Sorry, Australians and all the others...

And sorry, group. I've taken all the abuse I will, publically and privatly. I waited for this to blow over, but stuff turns up here and in my mailbox that I will not stand for. Anti-military does not mean I will accept endless abuse!

Kind regards and excuses to all others,

Wammes Witkop

Just to clarify, the FCC doesn't require a license for LMR work, but many prospective employers do. It's an easy way for them to weed out some of the non-qualified in the employment process.

Kind of like "skirting the law"! Your description reminds me
of Clinton trying to say her giving him Oral sex thing was not sex
because he wasn't giving her sex.

Frankly I am appaled & disappointed at these people who do
as you described, get a call from out of area when they
are not from that area. Such conduct is very poor.

Greetings,

I wound up renting (three year lease) in one of those antenna restricted areas. No part of any antenna can be higher than 10 feet over the house (house is 20 feet); the backyard is about 80 x 50 feet. I have full-size antennas for 80-10 meters and a loaded sloper on 160 meters.

The tower is a 51 foot Tri-Ex crankup that nests at 21 feet. When lowered the antenna is not visible from the front of the house. I have a homebrew full-size open-sleeve fed 7 element tribander for 20-10 meters (covers WARC with real gain over a dipole at the same height--VSWR on 17 and 12 is about 3:1--similar to the Force 12 C3), full size 1/4 slopers for 30, 40, and 80 meters, and a 70 foot center-loaded quarter wave sloper on 160 meters

Most of the time the tower sits in the full down position. I've worked 210 countries in the past 9 months--I'm still short 28 on 80 meters for 5BDXCC, but I'll get there. On 160, 49 states (where's Maine when you need them?) and 15 countries during the two 160 meters contests this winter.

While a huge antenna farm would be a great thing, you can do well with less.

I hate paying for antennas. It seems to me that this is the one area wide open for experimentation. All my antennas cost less then $500 combined.

The tower was bent and had to be straightened, but it was free. I had to dig the hole and pour the concrete as well as have a new base welded and replace the cables on the tower--total cost was about $300

Antenna modelling software is a big plus. NEC4WIN was less than 70 dollars and an antenna analyser was under $100 used.

When you consider what one commercial antennas costs these days, I wonder why more people don't homebrew...

My 2 cents.

Helping a friend liquidate his dad's estate. What should he ask for the
following? (All of it is in absolutely MINT condition).

Alpha 76 Amplifier
Ten Tec Triton IV HF transciever
Heathkit station console with scope. Also has speaker and other accessories.
TA-33 Beam with 40 Meter Kit
Kenwood TS-820 in the original box.
Remote VFO for Kenwood 820, still in original box. Never used.

That message from the Russian ham (about converting CB rigs to 10 meters) got cross-posted to the CB newsgroup. A portion of one message (with the CB response) appears below. This did not help relations between the two groups, needless to say.

> Lately there have been a lot of CBers and truckers moving
>>up into the 10 meter amateur band. I thought it was one of these guys
>>trolling. Sorry. Paul K
>
Icecoldnyc responds:
>How could a CBer troll in a CB News Group??????

K5PF explains:

Dear Icecoldnyc:
This thread appeared in an amateur radio newsgroup. Only part of it is being echoed in the CB group.

It was not apparent that the original poster was a ham. His foreign call sign contained a "zero". It read like a screen name because our monitors do not display Zero with a diagonal line and it therefore appeared to be the letter "O".

you could just go to the windows tiem setting panel and set it to GMT.
GMT is real cloes to UTC anyways and it would do what you want in the
icno tray.

Hello,
Does anyone know of any mods for the Yaesu FT-530 that work?
I have found some but they do not work.

Thanks, Brad

See The ongoing war contiues between the CBers and Amateur radio
operators. Do you know why this is? Because we can do legally what the
want to do. They can't do what we do without breaking the law. That is
why this war contiues. I say we (by we I mean amateur radio operators)
anxe 11 meters. See how we do it check out

bo>Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur.misc
bo>?? I just got out my Gordon West No-Code book and looked up the
bo>freq-charts in it.. Totally different than what I got off the Icom
bo>website. The 433mhz simplex freqs are shown as repeater freqs in
bo>the book, and most of the rest are also different... "Woe is me.."
bo>What should I do? What should I do?... ;)

Look at the A.R.R.L. 70cm band plan. It is available at www.arrl.org.
Go th the site, go to the site index, go to the B section, and band plans.
You will se a list of band plans. Go to the one for 70cm. I was just
there...there are no FM voice frequencies listed below 444.000Mhz.
444.600Mhz is the national simplex frequency. Band plans can be somewhat
different locally. I also suggests getting a copy of the A.R.R.L. Repeater
Directory. Don't trust the Gordon West book, or the Icom web site. The
chart on the Icom web site was developed by Gordon West! so if it doesn't
agree with the study guide by Gordon West, something is a little screwy
there.

Not 'underway' or 'at sea,' but still 'afloat,' the ARRL Southwestern Division convention, Hamcon '99, will be on the RMS Queen Mary in Long Beach CA October 1-3, 1999.

Early bird registration is just $10, and includes a free $5 souvenir pin. Vendors are still being solicited. The technical sessions will rival Dayton, and there are likely to be several thousand hams in attendance, if past attendance at the Queen Mary is a guide.

For more details, see our WWW site: http://www.qsl.net/arrlsw/hamcon/

Hi Tony,

I beleive you are a bit ill-informed regarding the early days of WWII and the virtually complete lack of small arms in the British Isles. Litterally THOUSANDS of sporting firearms were donated by concerned American gun owners so that the Brits could defend themselves from Hitler. Seems the government there had curtailed individual rights to bear arms, with predictable results once the bulk of thier "official" arms were lost in Northern France, Singapore, etc. While it wasn't a huge number and they went to Home Guard units, these arms freed up a bunch of Enfields, and a couple of extra divisions made a BIG difference early on. Enough to turn the tide? Probably not, but it's just another example of why an armed citizenry is the best guarantor of Freedom.

Kevin McDonald

<<KEYDOWNS>>

<<CB rigs with 10,000 watt amplifiers>>>

<<Whenever you see these openly boasted about, forward it to
rholling@fcc.gov .>>

I've since learned that a recent "keydown" winner employed a SEVENTY THOUSAND
WATT amplifier. (Not sure if these numbers are fabricated, or what)

Anyhow, all Hollingsworth or anybody need do is search the phrase 'KEYDOWNS" to
find several websites featuring photos of these events and their participants.
(These folks are quite proud of their achievments!) In addition, amplifier
companies such as "DAVEMADE", "NONAME", and "TRAINBUILT" and others have
easy-to-find web pages dedicated to selling high power amplifiers specifically
made for the CB market.

Dear Mr. Stiglitz, and to those following this thread.
I mean no offense to anyone's personal beliefs (nor do I mean to violate anyone's privacy), however I would
like to share a few facts that bear relevance to this discussion.

1)Americans did join the militaries of Canada, Britain (and other free fighting forces in Europe) before the U.S.
became officially involved (in both World Wars). Many of these people did bring their own weapons with them,
typically handguns to be used as a secondary weapon. While this may have been "officially" frowned upon, most
of the allied nations allowed it since they all (minus the U.S.) had a shortage of weapons, which brings me to the
second fact:

2) After the British defeat/rout at Dunkirk, the British military was in short supply of weapons (having left most
of them on the European beaches). Thousands of americans donated their personal weapons to the British
government, as part of a U.S. Gov. sponsored weapons drive. While few of these weapons made it to the front
lines in Europe and Asia, they served proudly in the British home guard and reserve/training units, thus
freeing-up the purpose-built military arms (made in the US, Canada, Australia, India and the UK) for front line
soldiers

3) The pilots and air-crew members of the U.S. military are still allowed to carry personal pistols as part of
their survival gear, assuming the firearm meets a few minimum standards.

Now allow me to shift slightly into a philosophical mode:

If a people are disarmed, their freedoms are kept about only through the good will of those who would otherwise
take them. I'm sure (ok, its actually just an opinion) that every Albanian in the Balkans wishes he or she had a
firearm right now.
I believe it was Jefferson who said "Our freedoms are protected by three boxes: the soap-box, the ballot-box and
the cartridge box"

Sincerely,
James Jewell.

Tony Stiglitz wrote:

Sorry to keep this going but, this is a total embarrassment to me as an "American".

Yeah, like "citizens" with their "own guns" went over and took on the Axis. Give me a freakin' break! This BS is so old that the Dead Sea was still sick when knuckleheads like you started spouting this crap.

> particularly with respect to providing emergency communications.
>
>So Jones, how does Paragraph (a) strike you as ancient? Our public service
>communications are how we're best known, especially.....

It strikes me as having nothing to do with your origional above assertion
that hams *have to build their own gear* to somehow fufill this ancient
charter. The rest of your reply also has nothing to do with your origional
homebrew assertion, but I will troll on...

>(b) Continuation and extension of the amateur's proven ability to
>contribute to the advancement of the radio art.
>Packet comes to mind as our latest contribution.

Packet was contributed by modern university educated digital type
engineers who just happened to also be hams, not the typical civilian
garage ham inventer of the 20's and 30's (ancient times and ancient
charters).

>Do you find advancing communications and technical skills ancient, Jones?

Most modern radio and computer technical advances are made by teams of
professional people in industrial labs these days. It's unfair to think
non-professional hams working in their hamshacks are supposed to somehow
make miraculous discoveries.

>Ask the EEs on these groups how they got their start in electronics;

Yep. I also got my start in electronics through ham radio. But when I got my
first job at Mororola in the 60's I was surprised to find that 95% of the
EE's there *were not* hams.

> (e) Continuation and extension of the amateur's unique ability to
> enhance international goodwill.

Chuckle. DX'ers have even worse manners than newsgroupies. How do you spread
goodwill with a signal report and QSL request, after shouting down the rest
of the ugly American mob...

7131. Help with TS-180S

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-26 00:00:00 UTC
From: Kevin Hunter <kjh@bootheel.net>
Message-ID: <01be762f$fe279520$2abcfbd1@default>
Source record: 147027

I have a Kenwood TS-180S that has some problems.
I wonder if what I'm experiencing is a common problem
that someone has run up against before.

The radio works perfectly until it warms up completely.
As the rig warms, it appears the PLL comes unlocked,
starting with the lower frequency bands first. 160 meters
will drop out, followed by 80, 40 etc. I have never lost 10
meters. When I say the PLL is coming unlocked, I base
that on the fact that the receive and transmit quits and the
display shows nothing but dots.

I have tried using a hair drying and circuit cooler to locate the
faulty componet. Nothing I cool seems help, although heating the
rig up with the hair dryer will cause it to fail quickly (about 5 minutes)
compared to idling (about 1 hour). I am desperate. Any guess or
suggestion will be greatly appreciated. Thanks. Kevin - KA0VKF

WRONG, BATF has admitted that no warrant was in existence at the time
of the raid, therefore the raid was illegal.

> 2. the cops wait 51 days to apprehend these cop killers then the thugs
> kill themselves and their kids

Again, WRONG as usual, the jury found that the Davidians
were not guilty. The real criminals of Waco are still at
large. FCC will not investigate its own criminal involvement
at Waco. Following trajectory of shots fired by BATF at
front of Mount Carmel Center leads directly to BATF agents
killed on roof, proving they were killed by friendly
fire, not by Davidians. This is all a matter of photographic
evidence, geometry and physics. But evidence is something
that supporters of a FASCIST government will never accept.

> 3. gun nuts vomit typical right wing paranoia

Not just defenders of the Constitution, but anyone
truly interested in controlling a lawless government
is pointing out the need for pursuing these issues.
It isn't paranoia, it is a finding of the House
Judiciary and Oversight Committees that FEDGOV was
totally out of line at Waco.

Returning to the original point of this thread at:
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS,
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying

emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the
purpose of avoiding criminal prosecution is specifically
described as a criminal violation in any Executive Order
pertaining to such classification at the time of
classification.

Get the FCC out of the control business, contact your
Congressman, ask that he support Henry Hyde of the House
Judiciary Committee to convene a hearing into the
criminal coverup by FCC Chairman Kennard of the
criminal operations of the FCC and FBI and US Air
Force engaged in Communications Act violations.

Get the American Radio Relay League out of its
tyrannical misrepresentation of the amateur community.
Publish the fact that the ARRL board voted not to
reveal the criminal operations of the FCC and FBI.
What decent person would be a member of such
a criminal organization. If you are in the ARRL,
moral integrity demands you quit.

I am typing this from the floor where I am rolling around Laughing. So pardon me if I make some typing mistakes.

I just went to the GAP antenna site where I see a new update (3/25/99). Actually it the same old tired crap. From what I could tell (it's very hard to read small print, boy and I was ashamed about the load time of the amateurish site I threw up) it's the same old rag (that GAP runs full page ads in) reviews that only mention performance of a couple of bands on what in some cases are supposed to be 8 or more band antennas.

I'm going to have to see if I can't find the World Radio review in which Kurt Sterba answered Gaps letter to him attacking him for saying what a good antenna the Butternut was. Kurt told 'em to go blow!

Keep those GAP horror story coming. I'll try and get them all in a testimonial section over the weekend.

Even assuming that all you said is true, which it isn't, how does that justify government jamming of amateur frequencies, the occurrence of which no one appears to be disputing? Mr. Zimmerlee may not be very diplomatic in his presentation of the facts, and he may even overestimate their import, but he has a valid point. This does appear to be something that was done with absolutely no legal authority. Someone should be punished for this.

More important, how can anything justify machine-gunning people who were trying to escape from the fire? Someone should most assuredly be punished for this.

With all good wishes,

Kevin, WB4AIO.

This will keep CBers and other stupid people out of the ham bands and require more studying for a license. If we had had the 90% passing rule a long time ago then we wouldn't have any stupid people on the ARRL board of directors today.

The two year non-renewable no-code license sounds like a great idea too!

Save CW, Tell the ARRL to KISS OFF!

>our gear.

Wasn't the purpose of that *ancient* charter to have a ready supply of trained (CW) ops that knew enough radio theory so they could easily be (and were) used by the military in times of national emergency?

Do you really think that the knowledge of how to string a dipole (and do CW) would be of military value today...

I can understand all responces made to the request unknowingly Paul did not reconize the sorce of the ?,
we do have a problem with the cb's getting used wrong and there is no easy fix. Howevever the mods are easily done by a ham or anybody else that gets the info in the future why not deliver the info to a lic. ham via email and not public display it may only keep one radio from being modified for the wrong reason but it is a start.

In an earlier post I pointed out that the police *abandoned* a large section of Los Angeles during recent riots there. Only the gun owners were (partially) successful in protecting themselves and their property.

In my town of Phoenix AZ there are many shootings and armed home invasions. (We are now allowed to carry concealed weapons for protection.) I often hear gunshots while sitting here at my computer. So I'm not going to give up my firearm anytime soon.

Are we civilized? Good question. I've been in Phoenix 50+ years and it's more dangerous now than at anytime in the past. Judging from the nightly news, Phoenix isn't alone...

So, just because you don't like the cber's in the world, you think we do not have the right to obtain a ham license..... Well, just to piss you off, I want you to know that I am a cber and have been for over 15 years.... I love the CB and it's challange to DX and be heard..... AND I'm currently working on my code to get my ham ticket.... Once I get it, I won't be getting off of the CB just because I have a ham license.... I will probably use it just as often as I do now.... I can almost guarantee you also use the CB.... Otherwise, how would you know that we are stupid? Hmmmm..... Must make you stupid too asshole...

Have a nice day jerkoff...

The arrl needs to dumb down amateur radio because when the good hams cancel their memberships, the league will need Cbers and Lambda queers to beef up membership again. And they can get more money from ham dealers and equipment makers, because slo-codes and cbers are appliance operators.

How much money is the arrl getting from Lambda anyway? I'll vote for the 90% passing score even if it does mean most people at the arrl HQ wouldn't have been able to pass.

We need to do something about the bootlegger cber's slo-codes on 10 meters too.

Hmmm... so even though I have upgraded by learning code (although at the moment it IS slow) I shouldn't be allowed to use 10 meters? Maybe I can be an exception, since I just built a rig and can't be considered a "appliance operator". I believe everyone has the right to their own thoughts and feelings but blanket statements about 'slow coders', such as myself are somewhat demeaning, especially considering the fact I am diligently getting my speed a bit quicker.

I dissagree even though I feel ,you are on the right track.Even if the
current tests required 100% to pass they are sooo easy we would still
have a bunch of people who hadn't really invested anything into getting
a license and therefore might not treat their hobby with respect.
I'm for harder tests including the CW tests,any idiot can get to 20WPM
in a few months. AB7RS

Macs are very expensive,no doubt about it,they never offer an entry level machine like the PC makers.

As far as software goes thats a myth,I can run ANY PC softwarew on my MAC and any Mac can do that either via software like "Virtual PC"or"Softwindows", or like I do it with the daughter card,which works flawlessly.I am not trying to convert you and if you don't like Macs great,but don't justify your preferences with myths and lies,that just makes you sound like an idiot.I'm sure your not! Well
I'm a Advanced clas operator and I passed my test with a 97% score. So
There I would stil be ham even if the requirments were rased. How ever I
beleive that such a action would be wrong. Millions of people enjoy
radio, Some like the technical part of it some just like to talk and
some just want to know if they can get a loaf of bread without paying
high phone bills or stopping by a pay phone. All of these types of
communications a perfectly leagal on the ham bands as well as CB. So
what is the differance? I'll tell you the differance the differance is
passing a test. I do beleive that there should be CW in some cases. I
also beleive that the problems of CB radio are of the FCC's own making.
I feel that there should be some kind of agrement to work this out. I
will say this the FCC listen to the ARRL but the ARRL only reperstant
20%ham radio. I also think that the Amateur community should welcome the
CBer with open arms. Allot of us including myself started in the ranks
of CB. I beleive that we should make CB part of the amateur communty.
Make it a nocode beginers type ticket and do away with the 150 mile
range and change the rules with regaurd to amplifiers and bandwidth. "I
Hate CBers" I geuss we can put that statement in a class of biggots, now
isn't that like I hate all niggers? (Sorry I used this for a example)
Thats saying I hate a group of people just becuase of the group. I have
been a ham for over 20 years and a CBer for over 30 years. I will tell
you at least in my area most of the 11-meter guys are much more behaived
then the guys on 75 or 20-meters, as far as consideration. 75% of then
run power though. So I hope you continue to hate CBers as a group and I
will continue being a member of that group then you can hate me too.
With that in mind your will then hate most of your ham radio buddies
because they got their startt in CB. Thats why I say lets anex 11-meters
and the 11-meter operator and make a license to acummadate the CBer. I
have this broken down in a plan see

http://www.dirtball.com/band.html

As far as making the test harder or making the passing requirement tougher I think that this would hurt the Service as a whole. In the USA I have found Safty in numbers. If we were to anex the 11-meter band as well as the operators it would bring new unheard of numbers to the ranks of Ham radio. Also it will assure us that what bands we keep we will keep.
I beleive CB radio is a good thing.
73 from Oris

Double Click on the clock in the corner, then set the Time Zone to GMT
Then goto ControlPanel->RegionalSettings
Select the Time tab
For the Time Style select "H:mm:ss"
that will give you a 24 hour clock instead of AM/PM

hmmm Are you implying that cb'rs lack intelligence? I beg to differ.. there are many people on this NG that are smart with the rf equipment. I have met quite a few hams that are great guys and are well liked in the ham radio community.. But can also be compared with rocks.. so open your mouth a little wider so your entire foot can fit in..

Why do CBer's insist on breaking regulations, by modifying radio's and using amps? You can't do CW on ten meters anymore without stepping on a CBer. I don't Know why the ARRL wants to give our hf bands away to CBers and no-codes, you're already using them!

March 29, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The Golist, N2AU, WB2RAJ/WB2YQH & The 59(9) DXReport, W3JJ, W4DN, K4PC, N4GN, W5NA, KE9NA, AH0W, W0YG, BV2PU, CT1ERK, CT3HF, DJ5AV & DX News Letter, E21EIC, F6AJA & LNDX, G4BUE & DX News Sheet, G4EDG, HS0/G3NOM, IK3ZAW, OZ5AAH, UR5EDO, ZS6RVG and Maynard Heustis for the following DX information.

3A, MONACO. "The 59(9) DXReport" reports that Henry, HB9APJ, will be active as 3A/HB9APJ, April 7-19th. Activity will be on 30-10 meters CW with an FT-990 and magnetic loop antenna. QSL via homecall.

3B9, RODRIGUES ISLAND. Frank Smith, AH0W, from the Midway-Kure DX Foundation (MKDXF), has released the following information: The Midway-Kure DX Foundation is about to embark on its 1999 DXpedition to Rodrigues Island (AF-017), the "Cinderella of the Mascarenes", starting April 1st and running through April 11th. Callsign will be 3B9R.
The DXpedition will operate on all bands, 6 meter through 160 meters and all modes. One of the 9 HF stations will be dedicated to RTTY only. Team-members represent five nations and include Bruce Butler/W6OSP, Kimo Chun/KH7U, Jari Jussila/OH2BU, Victor Keller/XE1VIC, Jacky Mandary/3B8CF, Garry Shapiro/NI6T, Ned Stearns/AA7A, Yuuji Yoshitani/JA3IG/K1NT and Frank Smith/AH0W/OH2LVG, team-leader. Individual team members may also operate from Mauritius after the operation as 3B9/home-call.
Acting as pilot stations will be Andy Chesnokov UA3AB, Tom Harrell/N4XP of the Dateline DX Association and Gary McClellan K7ZD. During the operation they can be contacted as follows:

ua3ab@dateline.ru
n4xp@juno.com
k7zd@inficad.com

QSL manager is Joyce Johnson, N7LVD, 5627 West Hearn Road, Glendale, Arizona 85306. A Web site will be announced soon. Up-to-date information can be found at: http://mkdxf@aztec.asu.edu

5B, CYPRUS. Look for F5SQM to be active as 5B4/F5SQM from April 1st to 6th. Also, look for George, 5B4AGC, to be active in the CQ WPX SSB Contest as H2G (yep H2G). QSL via home callsign.

7Q, MALAWI. Activity will increase from this one. Ron, 7Q7RM, reportedly is back in the country with John/7Q7JL, Les/7Q7LA and Harry/7Q7HB to follow. QSL is only via DIRECT to G0IAS. NO BUREAU CARDS!

BV2, TAIWAN. BV2PU will be active in the CQ WPX Contest as BV2B. Activity will be on all HF bands. QSL via BV2WA, via direct or bureau.

BY1DX, CHINA. A press release from Tim, N4GN, reports that the "Beijing- Chaoyang- Nokia Amateur Radio station", BY1DX, is now active. It is a first-ever foreign corporate sponsored amateur radio club in China, and it commenced its activities this past week on 40/20/15 meters. QSL cards go to OH2BH, Finland CBA address: Nuottaniementie 3D20, 02230 Espoo, FINLAND. ADDED NOTE: OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

CQ, PORTUGAL. Antonio, CT1ERK, reports to OPDX that he will be active during the 1999 CQ WPX SSB Contest using the special callsign CQ7ERK. He will be active as a Single Operator/Low Power Single Band 10 meter entry. QSL via his home callsign CT1ERK via the bureau or direct to his CBA. Also, look for team CQ9K to be active in the CQ WPX Contest as a Multi-Single entry. The Team operators are: CT3BD, CT3CD, CT3DL, CT3HF, CT3HK, CT3IA and CT3KN. The QSL route is via CS3MAD, P.O.Box 4694, P-9058 Funchal, Madeira Island, or via the Bureau.

E4, PALESTINE. Peter, G3WQU, who has been operating as 4X/G3WQU from Bethlehem since 1975, has now been issued a license by the Deputy Minister of Posts and Telecommunications in Gaza, Palestine, with the callsign E4/G3WQU. PLEASE NOTE: E4 and not E44 or E41 as previously issued. Peter will be active during weekends beginning March 26th on CW only on all bands 80-10 meters, 160 meters is not available. Peter expects to be in Bethlehem for at least two years. QSL via G3WQU at RSGB QSL Bureau or direct to: Peter McKay, UNIFIL, PO Box 75, NAHARIYYA 22100, ISRAEL.

EM4, UKRAINE. The team of UR4EYT (club station of young technicians) will be active as EM4E during most contests for the year 1999. The team used to use the contest callsign UR4E. QSLs are OK via the bureau to UR4EYT, or direct to: P.O.B. 3363, Dnepropetrovsk-5, 320005, UKRAINE.

HK0. MALPELO ISLAND. Pedro, HK3JJH/0M will stay there until the early part of April now.

HS, THAILAND. Look for the RAST HS0AC Club station to be active during the CQWW SSB WPX Contest as a Multi/Single entry. Operators will be HS1CKC, HS1BZY, HS0GBI, HS0VGC, E21ENF and E21EIC. The team of operators are licenced to use 80 and 160 meters during the contest. HS0AC activity will be on 10/15/20/40/80/160 meters. QSL Manager is HS0/G3NOM.
Also, look for HS7UCQ/p to be active in the CQWW WPX Contest. Operators will be HS7UCQ, HS7VMI and E21IZC. QSL Manager is E21IZC.

IOTA NEWS. Hans, DF5UG, will re-attempt a landing on Pulau Satang (OC-165), subject to weather and tidal conditions. He will use the callsign 9M8QQ. He has received permission from the National Museum of Sarawak for a two night stay on the island, and the use of a generator which was not previously allowed. He plans to leave for the island at 0630z on Saturday, March 27th, and to depart after 0400z on Monday, March 29th. Look for him on the IOTA SSB frequencies on 14/21/28 Mhz. QSL via DF5UG.

IOTA NEWS. Veronica, IK3ZAW, reports to OPDX that her friend Kiki, SV1BRL, and she (and possibly other Athens ham) will be operating next weekend (April 3-4th) from Evvoia Island (EU-060). They will be signing with a special callsign, J41YLS (YLs hi!). Operations will be on phone and as usual CW, and she will possibly try some of the RS-13 and AO-27 orbits.

JX, JAN MAYEN. If you need this one you better work it soon. Per, LA7DFA, will go QRT as JX7DFA on April 16th and return to Norway. He reports that there will not be any further amateur radio activity this summer. Look for Per between 1800 and 2230z on 20 meters SSB/RTTY. Also, check 30 meters.

KP2, AMERICAN VIRGIN ISLANDS. The "DX News Letter" reports that Chet, W6XK, will be active as WP2Z during the CQ WPX SSB Contest. QSL via KU9C. Before and after the contest he will be signing as KP2/W6XK. QSL via W6XK.

QSL INFO AND NEWS......
MORE ON ZF2NT QSL ROUTE (Correction). Last week we mentioned that Chris, K4PC (one of 4-land's QSL Bureau Sorters), reported that many QSLs (for ZF2NT) have been sent to the Bureau for N4YBF (who does not keep SASEs on file with the Bureau). OPDX and K4PC have learned since then, thanks to N2AU and ZF2NT, that N4YBF is NOT the QSL Manager for Bruce, ZF2NT. Art, N2AU, reports that in May of 1998, the callsign was reissued to Bruce Sawyer, N6NT, and Art has been the QSL Manager for ZF2NT since day one of Bruce's operation. Art has contacted Chris, K4PC, by E-mail and will be sending Chris some SASEs to answer the bureau cards. So the story has a happy ending.

HC8L QSL ROUTE UPDATE. Art, N2AU, reports that he is now the QSL Manager for Dave, W6NL, who operated as HC8L in the past ARRL SSB DX Contest. He states that it will take 6-8 weeks to get cards and logs. So, all cards for the last ARRL SSB Contest and future operations go via N2AU.

Art, N2AU, also reports to OPDX that he is the QSL Manager for the following stations: NH7A, YC0LOW, YB0ARA/9, YB0JWA, KH6X, KH6T, KH6XT, XE1RGL, ZF2NT, HC8L, V31DX, 4X6TT, V29TT, RZ9WZ, UA9FGR, ZP5XF, YO3APJ (NA only), CT1EGW, KL7Y, CT98EGW, and W6XR.

Reports indicate that the FO0SIL QSLs are being received.......

QSLs for the NP3X CQ WPX Contest operation go via W4DN.........

Z2/ZS6PDX QSL CARDS. David, ZS6RVG, has informed OPDX that due to a computer problem, David hit the wrong key, and the QSO times on his computer logs for most of the Z2/ZS6PDX trip were set to 1500z. David has received a lot of direct cards and was able to rebuild alot of the database with approx. the correct QSO times. However, about 250 cards have been sent to the bureau with the time field blank. David hopes that this will not cause to many problems, and thanks everyone for their patience and tolerance.

E44/OZ5IPA cards for this one-man DXpedition to Palestine (March 10-15th, 4659 QSOs) have been received from the printers. QSL Manager is OZ5AAH, Ben Jakobsen, 9 Knoldager, DK-2670 Greve, Denmark. Cards without sufficient postage (2 IRC or similar) will be sent back via bureau. By the way, Ben is also QSL Manager for: OX3IPA, OY5IPA, HS0/OZ5IPA, and TF/OZ5IPA.

Charlie, W0YG, has requested not to QSL using the ARRL Bureau system for his recent VK9XX/YY operation. If you insist on QSLing through the Bureau, please use the WF5E QSL service which is much easier for Charlie's QSLing team.

Veronica, IK3ZAW, reports that last Saturday she received the 5A1IC printed QSLs, and on Monday (March 22nd) all the direct requests have been answered. As for the 5A22PA QSLs, she is still waiting for both the cards and the logs. She states both operations can be answered via the bureau.

SPECIAL EVENT. "The 59(9) DXReport" reports that Mike, ZL1MH, will use ZL2RN/1, April 1-30th, as part of the Commonwealth Area Stations tribute to Portishead Radio. Activity will be CW on 7020, 10120, 14050, 21050 and 28050 kHz.

SPECIAL EVENT/PREFIX. Industry Canada has released the prefix CY6 for use by the Calgary area amateurs from July 1-14th. This is to celebrate the world famous Calgary Stampede. This will be a good time to work on your Stampede City Award. Full details of the award can be seen at: http://www.cara.ampr.org/stampede.html
VE6NQ is a two point station for the award and will be on July 1st, in the Canada Day contest. All inquiries can be sent to: ve6yc@rac.ca

TM7, FRANCE. Look for F5AMH to use the callsign TM7T in this weekend's CQ WPX SSB Contest.

TZ, MALI. Alexandre, TZ6AK, can sometimes be found on 20 meters around 0630z, but is hard to find on the bands. A report indicates that he responds to a "CQ DX", and he listens for stations instead of calling himself. OPDX has also learned that Alexandre is French and speaks little English. QSL info is to: PO Box 933, Bamako, Mali.

WEBSITE OF INTEREST. Leon, W5NA, says to check out the following MDXA's Web site, "put together by a bunch of DXERS and Contesters.... who also run the ARRL W5 Incoming QSL Bureau": http://www.mdxa.org

ZC4 OPERATION CANCELLED. A report states that George, 5B4AGC, will not operate from ZC4 on March 26th. His mother has passed way, and he has returned to the UK.

ZD8, ASCENSION ISLAND. The "DX News Sheet" reports that Jim/N6TJ and Glen/K6NA are active again until March 31st as ZD8Z and ZD8A. This will include activity in the CQ WPX SSB Contest (Single Band 10 and 15 meters). QSL ZD8Z via VE3HO and ZD8A via home callsign.

Source record: 147164

Hello. I have a chance to buy one of these and was
wondering the following:
Is it solid state or tube type?
Is it CW only or if voice capable AM or SSB?
How many watts output?
The approximate age.

This is a marine lifeboat radio with a crank generator and
antenna kit in a portable suitcase.
I thought it might be a novel rig for field day, emergency
use or just for fun. Any info
greatly appreciated.

Randy.

Dear Mr. Stiglitz, and to those following this thread.
I mean no offense to anyone's personal beliefs (nor do I mean to violate anyone's privacy), however I would like to share a few facts that bear relevance to this discussion.

1)Americans did join the militaries of Canada, Britain (and other free fighting forces in Europe) before the U.S. became officially involved (in both World Wars). Many of these people did bring their own weapons with them, typically handguns to be used as a secondary weapon. While this may have been "officially" frowned upon, most of the allied nations allowed it since they all (minus the U.S.) had a shortage of weapons, which brings me to the second fact:

2) After the British defeat/rout at Dunkirk, the British military was in short supply of weapons (having left most of them on the European beaches). Thousands of americans donated their personal weapons to the British government, as part of a U.S. Gov. sponsored weapons drive. While few of these weapons made it to the front lines in Europe and Asia, they served proudly in the British home guard and reserve/training units, thus freeing-up the purpose-built military arms (made in the US, Canada, Australia, India and the UK) for front line soldiers

3) The pilots and air-crew members of the U.S. military are still allowed to carry personal pistols as part of their survival gear, assuming the firearm meets a few minimum standards.

Now allow me to shift slightly into a philosophical mode:

If a people are disarmed, their freedoms are kept about only through the good will of those who would otherwise take them. I'm sure (ok, its actually just an opinion) that every Albanian in the Balkans wishes he or she had a firearm right now.
I believe it was Jefferson who said "Our freedoms are protected by three boxes: the soap-box, the ballot-box and the cartridge box"

Sincerely,
James Jewell

7182. FT-847 SSB distortion

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-26 00:00:00 UTC
From: MANOS <pelamare@her.forthnet.gr>
Message-ID: <7dekie$f6m$1@medousa.forthnet.gr>
Source record: 147200

Does anyone have any experience using the FT847 for sats having a 2M uplink
and a 440 downlink, when connected to a
70cm/2M antenna system?
When I transmit, I hear distorted audio.
It just sounds very distorted on the FT847 while keying the mic.
I use separate antennas.
It's a real pain, especially if you are trying to hear your echo when
tweaking for sat work...
Can anyone tell me if they are experiencing this as well,i think that it's a
serious problem?

I'd be a little cautious, though. The 202 has a bad habit of having
its phase locked loop unlock during transmit at high power. The RF
gets back into the radio and causes it to unlock. Once that happens,
you have to power cycle the thing to get it back into operation. Not a
big deal, but annoying.

Greeting all who read this.

As one of a deputy charge d'affairs of the Jugoslav Communications Ministry,it is to me a most appalling this reaction to the heart feld post of this conserned citoyen.

Kosovo Liberty Army does too commit atocity, after we majke substantial withdrawl from the Kosova province in October, committing some 6 acts of deadly terrorism against Serb citoyen.

Tito is good for no man, but free elected Milosevic is manhandled by your state influenced media. One need look only at KLA web to see the Java designed sight is clearly CIA's by-product. This is given that U.S.A. policy is know an independce for Kosovo.

As ham I look to work you and QSL during WPX this weekend

Jon Pearl Replies:

That's kinda what Gary was infering (about you)

including yours
>Gary. That's what's wrong with this world today, too many people
>sticking their nose into other people's business.

You set the example okay... I mean so we'll know what it looks like when we
see it!

And no, I don't know
>how to activate my filter, wasn't aware I even had one. But seeing as
>how you know it all oh wise one, how about "elmering" me on this
>subject. And then I could filter out your posts.

You 'can' filter his post's... All you have to do it jump aroung them. I on the other hand am having to drop to the bottom of the list to 'find' the thread, as it contains some ongoing dialog I am interested in.

And yes, I can skip
>over threads such as these, and I don't read them.

You don't read what? "BUSTEEEEEDO"

But I have one
>question, what in the hell do boatanchors have to do with shooting
>people?

Well I think you have just won the "Pinko Liberal Award!" Where in this thread have you seen anyone carry on the dialog that pertains to 'shooting people.' My threads, and those of other's have by and large been contained to the subject of our "Inalienable Rights." Please don't attempt to 'group' individuals into what is obviously "your" 'contentious' predisposition on the subject of guns, when the subject matter is deeper than either guns in general, or as you put it, 'shooting people.'

Oversimplification of the 'subject at hand' is boorish at best.

No Butch, I didn't do "something wrong".

The antenna is designed for widebandwidth and low Q. As a result, it is a
sorry performer. I have dipoles at modest height which blow it away in terms
of performance (both transmit and receive).

Save your money.

I can't put up a full size 160M 1/4-wave vertical (few of us can), but I have the GAP Voyager DX, a W9INN coil-loaded sloper, and an inverted L in my back yard on 160. Comparing these three (both on transmit and receive) the GAP comes last every time.

Excuse me, but as a foreigner I need to ask this: Why do you still want to carry a gun? The only answer that comes to my mind is: "to use it eventually".

I understand that this is in your constitution. But the constitution was made in an era where you often had to protect your life by yourself.

Now the police protects your life, and besides, it's 1999 and you're a civilised country, aren't you?

Yeh ... right. I would like to see your home brew version of Photoshop 5 or MS Office 97.
What internet browser and news reader are you using now? Your own?
Go blow smoke up some other guliable groups ass because we are two smart for you here.

The plain and simple fact is that a lot of todays amateurs would rather spend $300-$400 on a vertical than put up a simple wire dipole. Not that there is anything really wrong with that, but Its sad to say but at the last field day I attended near Rockford, Ill. the hams there did NOT know how to cut and tune a wire inverted vee dipole. I brought them a large roll of wire and they had to ask how to do it. They had no problem seting up an pre-manufactured R-7000 vetrical or Tri band beam.

Sometimes I think that the best thing that could happen to us is for Y2K to wipe out all microprocessor controled equipment and force us all to go back to thinking for ourselves once again.

Unlike amateur radio, none of the activities you mention above contain a
government-mandated charter which asks, more or less, that we *do* build
our gear. Let's review the charter since you've seem to have forgotten
it:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

How would you satisfy (b), (c), and (d) without doing some building?
(As an aside, one wonders how the no-code techs go about satisfying
paragraph (e)...)

7206. Attention, Illegal Operators: The Party is Over

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-27 00:00:00 UTC
From: rfenforcer@aol.com
Message-ID: <19990326201024.03862.00000230@ngol04.aol.com>
Source record: 147031

From the March 26, 1999 edition of "The ARRL Letter", published by the American Radio Relay League:

(begin quoted material)

The FCC is investigating information indicating that Technician licensee Leonard Martin, KC5WHN, of Houston, Texas, operated outside of the amateur bands without a proper license. Field Office personnel in Houston reportedly monitored Martin and located him using direction-finding equipment on two occasions. On February 27, he was said to be operating on 27.535 MHz and 545 MHz. On March 15, he was said to be operating on 27.370 MHz, a frequency between CB channels.

FCC personnel, accompanied by local police, visited Martin on March 15, but he allegedly refused a request to inspect his station. The FCC's Riley Hollingsworth, K4ZDH, says he has spoken with Martin, and the case is under review. "This subjects him to a large fine for unlicensed operation and refusal to allow an inspection, plus loss of his license," Hollingsworth said.

The FCC warned Martin in writing last November 3 about operation on frequencies other than those authorized under his Amateur Radio license. "While these warning letters are a courtesy, we don't forget who we sent them to and it is a serious mistake not to take them to heart," Hollingsworth commented.

In other actions, the FCC sent Warning Notices to an Illinois ham alleging broadcasting and on-air harassment as well as transmission of profane and indecent language. The FCC also warned a Texas ham about causing deliberate interference on 40 meters, an Illinois ham who holds a Technician ticket about operating on 20 and 40 meters, and a North Carolina Novice who's allegedly showed up on 2 meters.

(end quoted material)

Riley Hollingsworth and the FCC are serious as a heart attack about eliminating illegal operators and it matters not whether they are on the ham bands, CB, or the so-called "freeband." There's a new sheriff in town and he has plenty of "silent helpers" such as myself who applaud his efforts and will do everything within their power to assist him.

If you are operating illegally, you are being monitored and a record is being made of your unlawful transmissions. You will be found, your equipment will be confiscated, and you will be subject to heavy fines and/or other sanctions. Don't think it can happen to you? Neither did Mr. Martin. Is it really worth the price to be an illegal radio operator? Think about it now, before it's too late.

>trained (CW) ops that knew enough radio theory so they could easily be (and
>were) used by the military in times of national emergency?

You're calling S97.1 ancient? Which part of it is ancient to you? Let's
look at it paragraph by paragraph:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an
amateur radio service having a fundamental purpose as expressed in the
following principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.

So Jones, how does Paragraph (a) strike you as ancient? Our public service
communications are how we're best known, especially in the tornado belt
(NWS's Sky Warn), and in the states which get hit by hurricanes. The
California Department of Forestry alone has a strong ham radio component
during fire season. Many states have amateur radio written into their
disaster plans.

(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.

Packet comes to mind as our latest contribution. But even those modes
we didn't invent were extensively beta tested by us. I don't see any-
thing ancient here.

(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and
technical phases of the art.

Do you find advancing communications and technical skills ancient, Jones?

(d) Expansion of the existing reservoir within the amateur radio
service of trained operators, technicians, and electronics experts.

Ask the EEs on these groups how they got their start in electronics;
many will tell you their interest came about from an early exposure

to ham radio. I bet that if we were to poll APCO members, many of them would say the same thing.

(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

Nothing ancient in regards to this paragraph. For many of us, working DX is the bread and butter of the hobby. It's what adds fun to the Service.

>Do you really think that the knowledge of how to string a dipole (and do CW) >would be of military value today...

If you want to do military comms, then join the military. OTOH, I imagine many RF-related corporations would be happy to have an applicant who's built his own amateur radio equipment and uses it to converse with other hams around the world. Resistors, capacitors, inductors, transistors, ICs, work the same whether they're used in ham gear or in the latest wireless wonders.

Jeff WH6U

Don't bother, Joe. You're a self-admitted law breaker (see the federal
regs concerning the CB radio service [Part 95] and their prohibition
against working DX). If you can't obey the Part 95 regs, you stand little
chance of a magical conversion in obedience to the Part 97 Amateur regs.
We don't need nor want any more law breakers in the ARS; we've already
got too many as it is. Hopefully the newly revitalized FCC enforcement
branch will shut 'em all down, then begin going after the unlawful CBers.

You won't make too many (ham) QSOs with it, Randy. It transmits on the fixed frequencies of 500 and 8364 kHz. As you turn the crank, a code wheel taps out ...---... over and over.

If you don't buy it, let me know (by email) - I'd like a chance to get one of those for my collection of maritime gear.

(I do have info about the ITT 401, but not the 403.)

>made of your unlawful transmissions.

You are absolutely correct, although those doing these acts are just going to
blow off your message as a bluff.

BTW, an Amateur Aux. operator on the East Coast told me that Hollinsworth
phoned him to discuss complaints the auxillary passed along about a certain
2-meter repeater.

Hollinsworth said he would prefer compliance, but if necessary, the offending
amateurs would find out just how serious he is about cleaning up the bands.

Source record: 147041

Well, guys. Some of you have done it again. What's with the I Hate CB and the warning to illegal operators? You posted it in the ham NG. Why was that not enough? You had to post it over in the CB group also and stir up S**t. Is that how you get your kicks?

If you were really ham operators (like you claim), you guys starting the flame wars would not do things to make hams look dumb/stupid. Do you not realize that many of today's hams previously or presently operate in the Citizens Band? So when you say you want to keep the stupid CBers out of ham radio, what's the real message? That anyone who had/has a CB is "stupid"? Gee, thanks a lot, pal.

Here's a shocker for you. The amateur service has been loosing numbers and there is an effort to recruit more folks to the hobby to keep our strength and influence. Many of tomorrow's hams are in the CB service at this time. And they make really good operators.

Personal freedom won't work without personal responsibility. Want to help our hobby? Think before you post--and especially before you cross-post!

Ever since Hollingsworth started his clean up of
the ham bands, we've noticed that the mentally ill are
returning to CB with their abusive language and filth.
This news group seems to have filled up with them too,
ever since Mr. H started denying them access to the
ham bands to release their anger.

Perhaps soon, one day, a family with children will
once again be able to have a ham radio on when children
are within hearing range of the radio.

Thank You Mr. Hollingsworth, for weeding the
mentally disturbed out of our hobby.

Via www.talkway.com for fun posting!

Most hams take a dim view of illegal operation within the amateur bands, just as folks don't like people who drive around with no license and no insurance and fake license plates.

However accurate your post is, it is out-of-line in a CB newsgroup for several reasons.

1. The ARRL letter addressed amateur issues, only.

2. What goes on in the CB bands should not be of concern to the Amateur radio community unless it is directly affecting the ham bands in some manner. Let the CBers deal with their own internal problems. If you operate on CB, "check your ham license at the door"; i.e., when you are on CB, you are an American citizen just like everyone else. Don't come in with your guns unholstered. CB is a different radio service. It has different rules and a different culture.

Would you storm into a biker bar yelling about how much better a four-wheeler is?

So, is this your first day here?

The entire subject of the ARRL Letter was amateur radio. It was inappropriate to cross-post to the CB newsgroup. Let the CB operators deal with their own problems. As long as it does not affect you (through splatter, priates in the ham band, etc.) let it rest. Dumping these subjects into the CB group is offensive to its participants (many of whom are hams) and it gives ham radio a black eye.

If you want to coach the ones who wish to become licensed, fine. But preaching "fire and brimstone" to them is not effective. Ask me how I know.......

Well said! One of the CBers suggested a test to get an Internet license. I'm inclined to agree. Reading headers could be part of the "theory" portion of the exam. In lieu of the code test, we could have a typing test. 20wpm minimum!

More hate / split'em up talk from our speaker with no name.

I venture to guess you:

1) Are not an Amateur Radio Operator
2) Do not know or use Morse Code

If you are a HAM, you are the worst kind of operator. Just think of what
you look like to people outside.

More hate / split'em up talk from our speaker with no name.

I venture to guess you:

1) Are not an Amateur Radio Operator
2) Do not know or use Morse Code

If you are a HAM, you are the worst kind of operator. Just think of what
you look like to people outside.

Get a life.
Get a name.
Take a speech class.

Stop crossposting to the world.

Thank you.

>Sorry for the dupes, guys.

Here's the one which SHOULD have come over:

>For the life of me, I cannot figure out why there is so much malice between
>cb'ers and hams. I have friends in both ranks and for the most part they are
>very good people.

Good question. Wish we knew the answer. Other than the trolls, I believe most of the problem comes from newbies to the hobby (and to the Internet). I compare it to young people in their first year of college. They have a new (and they think important) status in life, and they are going to change the world overnight.

Protests, sit-in's, marches, you see it all. By the time they graduate, they have learned that the world may be black and white, but there are areas of grey. They also have learned (hopefully) that you don't change the world overnight.

In my opinion, some new hams have to pass through a similar stage. Those who have been around a while (on CB, Ham, or Internet) should try to explain to the new kids that:

A. There are good and bad apples in all three barrels.

B. It's better to PERSUADE someone to change than to try FORCING them with yelling, screaming, and threats.

C. If you hate loud music, don't go to rock concerts. If you don't like what's going on in a particular part of the radio spectrum, don't listen there. Ignore it until it affects you. Only then should one become involved.

The tough thing for us, Bujia, is knowing that this will be an ongoing delima. New "children" are being born every minute. The education/training process is never over.

Thanks for your thoughtful, well-written post. The comparison of bicycles and autos was excellent.

Greetings all,

Actually, having something shipped C.O.D. is no real protection for the buyer either. Since U.P.S. doesn't allow you to open the package for inspection before accepting it, there's nothing to keep the seller from packing a cinderblock instead of that nice Icom etc. you thought you were going to get. Bottom line is, the buyer is always the one at most risk. So the old addage applies: " Buyer Beware!"

7237. Re: Attention, Illegal Operators: The Party is Over

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-27 00:00:00 UTC
From: rfenforcer@aol.com
Message-ID: <19990327102830.03863.00000511@ngol04.aol.com>
Source record: 147062

There has been much discussion here and a few misinterpretations regarding the intent of my original message.

This is not a "ham vs CB" debate, as many respondents have tried to turn it into. Yes, I am a licensed amateur radio operator. I am also an active CBer and have been since the mid-1970s. In addition, I am an active scannist, shortwave listener, and Internet newsgroup participant. Personally, I believe the ongoing feud between amateur and citizens' band enthusiasts is harmful to the public image and potentially detrimental to the future of both radio services.

I am not "anti-CB", but rather, "anti-illegal operator." Far from being a "victimless crime" (as many here would have you believe), illegal radio operation affects all of us. It has been suggested that these operators simply be "left alone" unless they are specifically bootlegging on the ham bands because "it's not our problem." Unfortunately, these illegal transmissions do have a negative impact on other, legitimate users of the radio spectrum.

Suppose you're a licensed ham, trying to work a weak station on the 10-meter amateur band but are prohibited from doing so because of the illegal operator a block away who spends his days running a dirty 1,000 watt amplifier on CB Channel 6. Your legal, rightful use and enjoyment of your amateur radio privileges are being unfairly inhibited by his illegal activities. Do you still say "it's not our problem?" How about the scanner enthusiast who finds his legal pasttime interrupted by the guy across the street who has decided to use a modified 100-watt UHF commerical radio so that he can become the self-appointed "channelmaster" of the new Family Radio Service in his neighborhood? And let's not forget the millions of law-abiding CB operators who follow the rules and use 27Mhz as it was intended for short-range, informal communications. They are denied the use of their rightful radio privileges when the service is allowed to degenerate into a cesspool of illegal amplifiers, "echo mikes", "noise toys", vulgarity, profanity, and general chaos.

There is an old adage which states "Your right to swing your arm ends at my nose." This can be applied directly to the current state-of-affairs concerning the amateur and citizens' band radio services. Unlawful radio operation affects other, legitimate users of the spectrum in a negative manner. If you wish to take your chances operating illegally, go ahead. To quote Clint Eastwood, "Do you feel lucky?" But rest assured that the "sleeping giant" has been awakened with renewed vigor and determination. Whether you are running excessive power on CB channels 1-40, operating illegally on the "freeband", or creating malicious interference on the 75-meter amateur band, your activities are being monitored and recorded for future reference and/or possible action.

"Do you feel lucky?"

I can clearly see by this post that you somehow do not fully comprehend that the end of the 20 th century is at hand. While CW is a nice mode of transmission, it is not the only one. Comparatively it is slower than most other forms. Even hig speed digital is faster than CW. From many of the reports that I have read and heard of say that the avewrage age of ham operators is getting older and the influx of younger operators have dropped mainly due to the internet. Now if you wish to stay with your nearly one century old philosphy then in about 20 years there will be almost no amatuer radio service at all. A band of 200 to 300 thousand operators are not going to have much clout with the FCC or the federal government. Swell the ranks to over 3 to 4 million and we may just get more atentionand maybe even more HF frequency allocations. There is at least three to five MHz of the HF spectrum that can easily be rediverted to amatuer radio service if the numbers were high enough. But I forget, most like you would love to keep the amatuer radio service a good ole boys club of elite and arogant snobs. I realy pity you in your prejudice and narrow minded thinking. You see only that which is front of you. The blinders that you have on for some reason will not let you see the big picture.

One final question. Did you make 90% on all your written exams? I bet I know the answer that you will reply with! Then would you be telling the truth?

The german Radio Amatuer Magazin "Funkamateur" made a test about the
Ten Tec 1253 Receiver in the Februar 99 issue.

They told, that the kit was easy to build. The builduing-manual is
very good. The receiver supports 9 bands from 1.8 to 22 MHz in AM, CW
and SSB.

The tester says: Not bad for this low price kit.

In the May issu, they will test the TenTec 1254.

Hope that helps

Chris

Actually, I use mine regularly, about 500 rounds a week. There's no other
way to maintain proficiency with a handgun. (Some 5 *billion* rounds of
ammo are expended yearly in the US, not all of it is aimed at another person.)

>I understand that this is in your constitution. But the constitution was made
>in an era where you often had to protect your life by yourself.
>
>Now the police protects your life, and besides, it's 1999 and you're a
>civilised country, aren't you?

You must be joking. The police can't protect us, nor are they legally required
to try (nor would I want to have to depend on a hireling for my security). There
are fewer active duty police per capita than there are radio amateurs, and most
of them are out running speed traps to raise revenue at any given time. This is
a huge country, the odds of having a policeman within hailing distance when
you are assaulted at home or on the street is virtually nil. The job of the police
is to clean up afterwards, and perhaps eventually catch the person who robbed,
crippled, or killed you. That's small consolation. The only real defense you have
is the one you provide for yourself, on the spot, at the moment of the assault.

The most effective form of defense you can carry is a gun that you know how
to use. It is an equalizer that allows you to face larger or more numerous attackers
with a better chance of survival than a club or knife or just your fists would provide.
Often, the mere presence of the gun is sufficient to deter an attack. Criminals are
often stupid, but they aren't so stupid that they won't pick on the easiest prey. An
armed man or woman is not easy prey.

You ask if this country is civilized. In the classic sense the answer is no. We
are not mostly city (the root word of civilized). We are spread over a continent.
That separation makes us more isolated, and forces us to be responsible for
our own safety since there is often no one within easy hail to immediately come
to our aid. (In our cities, the shameful fact is that most people wouldn't come
to your aid if you did call out for help. The sorts of generations old communities
you have in Europe are rare here. We have a highly mobile society, and our
neighbors are often strangers or casual acquaintances at best. There is no
strong bond to cause them to place themselves at risk to aid you.)

We also have a very diverse population, many of whom come from more violent
backgrounds than may be the case in a country with a more homogeneous
population. We have ethnic gangs who support themselves by strongarm tactics.
We have dopers attempting to supply their habits via strongarm tactics. We have

violent drunks. We have the mentally ill wandering our streets (thanks to a failed liberal movement to "mainstream" them out of asylums). Even OJ is walking around loose.

We don't have, and we don't want, a police state. That would be worse than having to occasionally personally deal with the violent ones in our society, and still wouldn't guarantee our security. Freedom carries a blood price. We must be prepared to pay it if necessary, but it would be criminal indeed if we were forced to pay it with our arms tied behind our backs. That would be the case if we were prohibited from bearing arms in our own defense.

We don't see ourselves as sheep, and we will not be treated like sheep. We refuse to go quietly to the slaughter as some millions of Europeans have done this century. We may still die, but we'll do our best to take some of the bastards along with us to serve as an honor guard in Hell. I don't see that spirit much in Europeans, but it is a part of our cultural heritage. If that makes us barbarians, then I suppose we are. It is better than being a serf.

Note that these values aren't shared by all Americans. With such a diverse population it would be surprising if they were. But it is a strong cultural sentiment among a large number of us. We'd rather put our trust in our own abilities than in those of some government flunky making $18,500 a year to wear a badge, eat donuts, and write traffic tickets. There are too few selfless White Knights in that crowd willing to put their bodies between you and the bad guys. To trust your security completely to them is folly, and many of the more honest cops will tell you that. Even those who want to be heros can't be at your side every moment. You're on your own in a not always friendly world. It behooves you to be prepared to deal with it.

True so far.

>With all the government deregulation of radio you don't
>have to have a genral class rto on site anymore. Braodcast station now
>only require that you be a college grad to be the enginear at a radio
>station.

Nonsense. You don't even have to be a high school graduate to be an
engineer at a broadcast station. Never did. Each station does have to
have a chief operator who must hold a GROL. He isn't required to be
present, but he must review and sign the logs. Smaller stations often
handle this on a contract basis. Bigger stations usually have someone
on staff who holds the GROL. Basically this is just an audit.

A GROL is not required to make adjustments or repairs to transmitting
equipment. Anyone the licensee designates can do that, and the responsibility
for the quality of their work falls only on the licensee. This is the big change
brought about by degregulation, the responsibility for the operation of the station
is now solely on the station licensee. The government no longer takes him off
the hook by pre-certifying his employees. He's responsible for doing that
himself.

Also, what would be a good band to start out on
73,
Michael Brown KU4UV

I would suggest 20 meters. It is open most of the time. It is well populated by CW ops. It offers both DX and continental QSO's. And the antenna is not too long for good backpacking...

given time.

For the most part an interesting post but you sure do make some stupid statements. I suspect that you are a ticketed speeder who is still smarting. The truth is that traffic accidents kill more than guns do and traffic enforcement is a valid police role. I won't deny there are some abuses for revenue, but to say *most* of those who put their life on the line are out to defraud you is ridiculous.

>We'd rather put our trust in our own
>abilities than in those of some government flunky making $18,500 a year to
>wear a badge, eat donuts, and write traffic tickets.

Phoenix cops start at $28000 and top out at $48000 after 7 years. To be promoted above officer a college degree is required. Of the several thousand who apply every year, only a small percentage can pass the tests which require a week to take. Then the 4 month academy has a 33% drop out rate. Those who make it through are the cream of the crop. They would even protect professed cop hater piece of garbage like you...

BTW, a Phoenix cop was ambushed, shot and killed yesterday by druggies. An armed citizen who just happened to witness the incident shot one of the bad guys in the back as he was running away. Unfortunately he is still alive. The other two perps were caught nearby and arrested.

I take ofdfense to your comments that any idiot can get to 20WPM in a few months! As an amatuer operator for 23 years I am appalled at this attitude. Personally I glad that I have stayed primarily off the HF bands to stay away from high and mighty idiots like you. I renewed my license only because the ARRRL finally had some guts to stand up to those like you that wnat to keep the amatuer radio service a good ole boys club. You do seem to have some knowledge. You can use a computer and gain acess to the internet. Oh by the way, if amatuer radio does not change, the nternet is more likely the death nell of the amatuer radio service. I can hold a comversation on the internet with a person is Japan far more reliable and easier thatn on 20 M. Have you ever thought of that? I guess not. And by the way, I don't have to know 20 WPM morse code. Have you realized that ships over 300 tons no longer are required to have a CW operator on board? Do you realize the FCC does not even five the radiotelegraphers test anymore? SO sometime in the next century, I hope that you find someone to pond the key with at 30 and 35 WPM.

Here are a few more questions that I have yet to heard a convincing argument for having CW as a restriction! Most answers fall into the category of "well I had to and so should you". I really don't thinkl that that is a very convincing argument. I guess your father had to walk 20 miles to take the garbage out and 50 miles to go to the school bus stop in the snow. So you feel obligated to

follow in your fathers step and ignore the advancements of technology. Then again I think you may be afraid of technology advancements?

Why should there be restrictions on frequency and power usage because someone is more or less proficinet in the usages of morse code?

Does CW make a better Ham?

Does high speed CW make one understand Electromagnetics better?

You again refer to S97.1 as being "ancient." What's ancient about
Paragraph (a)? Or are only those paragraphs you wish not to abide
by ancient?

>The rest of your reply also has nothing to do with your origional
>homebrew assertion,

The rest of my reply tries to pry from you what part of S97.1 you believe
is ancient.

>but I will troll on...

Glad to see you finally admit to being a troll. :)

My original assertion is above: "...the charter asks, more or less, that
we do build our own gear." And I ended my original post with "How would
you satisfy [paragraphs] (b), (c), and (d) without doing some building?"
The "more or less" and "some" should help ease your guilt if you're an
appliance operator.

Calling S97.1 "ancient" doesn't alleviate you from having to abide by
it. We don't get to pick and choose those portions of Part 97 we wish
to obey.

I'm not against buying them, but for self defense (in case the mother country wants her colonies back). Or maybe to guard the oil in the middle east for my Chevy Suburban (13 miles per gallon). But to mess with a civil war that's been brewing a millennium does seem like folly.

But wait. Ain't the UK in NATO? What's your excuse on *your* foreign policy...

In my first 20 years (or so) as a ham, I built or modified most of my stuff. The last 20+ I've been an appliance op. I haven't felt too guilty since I don't think it's a crime. I plead (almost) not guilty.

>Calling S97.1 "ancient" doesn't alleviate you from having to abide by
>it. We don't get to pick and choose those portions of Part 97 we wish

If I break a *real* regulation there is a penalty to pay. At minimum a warning or a fine. At worst I could lose my license. What (legal) sanction do I get if I violate this ancient *build you own stuff and advance the art* charter? How often do I have to prove to the authorities I have built something or show my new patents? If there is no sanction then I am not *required* to comply. It becomes (and is) but an ancient guideline whose purpose has long since passed with history...

I think if you check your paperwork, James, you will see that for the last 23 years you have been contractually obligated to stay off the HF bands.....

Those of us who do operate on HF would like to thank you for staying off the HF bands and for following the terms of your agreement with the F.C.C.

Keep up the good work.

Over the past little while, I've heard rumours flying about the future of the Radio Shack HTX-202. While many people are insisting that it's already been discontinued, why is it still being stocked in Canadian Radio Shack's? Is this discontinuation applicable to the USA only, or is this an international implication?

If anyone here knows anything in regards to the future of the HTX-202 2m Radio Shack Transceiver in Canada, any/all comments and messages would be much appreciated.

Thanks in advance;

Mike (VE5NWO)

This would be for anyone who does a lot of work on computers.It is a professional model board that will diagnose hardware problems with a PC even if the computer will not boot.The only thing that has to working is the power supply, the processor and the main data bus.It has its own on board bios with three different bios chips in order to diagnose component level problems in IBM PC, XT, AT(286-486 and Pentium) machines.Has indicators on board so you can test even without video card and monitor.Has parallel and serial loop-back test plug and operating manual.I've been told that this sold for over $500 new.Asking $200 plus shipping OBO
Thanks,
Steve KC5ZOS

No nation has been conquered by air power alone. To conquer and hold
territory, ultimately you have to have foot soldiers with rifles standing on it,
contesting it inch by bloody inch with the defenders. That is, you do unless
the defenders are unarmed sheep.

Bandplans vary widely by locality. Don't pay any attention to bandplans
published nationally. They're almost always wrong for your area. Inquire
locally, usually from the local frequency coordinating body, as to the details
of any plan in effect in your area.

As reported earlier...The 147.435 Mhz. W6NUT controversial repeater
from Los Angeles was on the net... Well, now is ISN'T..!!

Apparently...the flakes who put iy up have moved, and lost interest..
However, maybe someone else will take over the task soon!!

Thanks to the ridiculous KD6GDB web page, (435.org)
which announces the repeater is ON the web....??

(With NO further information..????) Looks like KD6GDB, and some other
wacko Jacko with a Hawaiian call put it up originally......

Hello, Los Angeles, will someone PLEASE TAKE OVER!!!!!!

Ken whats the station like down there these days? I was there around 81 we had a Kenwood 520, a teleype machine (which I stuck a picture of Joe Walsh, WB6ACU under the plastic nameplate) Several other pieces of tube gear including a repeater which was motorola. Someones homebrew nixie tube display that lit up W8UPD and a can of "Chock full of Nuts" coffee can with 20 year old coffee in it. I'm sure it's changed a bit in 20 years.

From: Ralph Mowery <rmowery@ibm.net>
Message-ID: <36FE83C6.8155EDF7@ibm.net>
Source record: 146992

I think that is the same modle I won at a hamfest. If it is, there
is no way to skip a memory chanel in the scan mode. I had a nice
discussion with the Alinco rep at a hamfest several years ago and he
even called me back to say he did some more checking and there was
no way.

Almost makes the memories useless or the scan function, whichever
you want to give up. Also the thing about staying on a scan
frequency for a bout 3 seconds and moving on in some (maybe all) of
the radios drives me up the wall.
I want it to lock on and stay put.

Heck my over 10 year old KDK would allow the options for most of
this.

Never saw a piece of junk for programming as some of the Alinco
stuff. The rigs work fine, but whoever does the programming needs
some ham input.

Clark,

The W1AW code broadcasts are a good resource. Their slow code broadcasts begin at 5 WPM. You can find a schedule with frequencies in a copy of QST, or check http://www.arrl.org/w1aw.html

7303. Re: QRP CW operating question

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-28 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <hRyL2.9$uq6.559@news9.ispnews.com>
Source record: 147002

Before you jump on the Ten-Tec QRP rig, go to this URL and read their
reviews of QRP rigs and their articles on QRP operating:
http://qrp.cc.nd.edu/qrp-l/hints/index.html

I have two superb QRP rigs from these folks:
S&S Engineering,
14102 Brown Road
Smithsburg, MD 21783
phone (301) 416-0661
FAX (301) 416-0963

Rigs use mil-spec components and are rock-solid. They use synthesizers that
are spot on. That is, if you hear a signal on a certain freq, you can tune
around, come back later, and there it is. 7040.15 is always in the same
spot. Keying is top notch, solid, no clicks. The rigs are compact, come
with keyer option. The instructions are detailed enough but you do need to
know what you are doing to build them. Mine fired up and operated with no
glitches at all. Everyone else I have talked with has had the same
experience.

One word of caution: QRP CW operation requires patience. You are the
smallest signal on the band and you get stepped on a lot.

>to defraud you is ridiculous.

You obviously haven't had experience with the departments around here.
I serve as firearms instructor for two of them, so I do know a little bit about
how they operate. One of them generates 70% of its town's revenue via
operating a speed trap. This is not unusual in smaller communities. They
have a quota that they have to fill, or they get in trouble. So they spend
almost all of their time running the speed trap, and very little patrolling.
Some of them like that, some don't, but all have to do it. It means that
they usually aren't around when you need them.

>>We'd rather put our trust in our own
>>abilities than in those of some government flunky making $18,500 a year to
>>wear a badge, eat donuts, and write traffic tickets.
>

>require a week to take. Then the 4 month academy has a 33% drop out rate.
>Those who make it through are the cream of the crop. They would even protect
>professed cop hater piece of garbage like you...

Oh, that's very nice. I can only speak from my own experience, but I'll assure
you that the cops around here don't make that sort of money, and they aren't
screened that way either. There are some good dedicated people, but most
aren't really that bright. The bright ones find other work, or stay in the job for
other reasons, not all of which are very savory.

>BTW, a Phoenix cop was ambushed, shot and killed yesterday by druggies. An
>armed citizen who just happened to witness the incident shot one of the bad
>guys in the back as he was running away. Unfortunately he is still alive.
>The other two perps were caught nearby and arrested.

I'm always sorry to hear of an officer performing his duty being killed or injured. I'm delighted that a citizen was able to intervene successfully. But to round out the picture, I'll point to the local cop recently arrested for multiple burglaries, and to the five Atlanta cops who were caught last year running a strongarm protection racket. I'll also mention the cop in my county who was recently convicted for raping and murdering a woman he stopped for a speeding violation. I'll also mention the local cop who was caught on his cruiser's video camera beating a suspect who was handcuffed and helpless on the ground. That's a perfect example of low IQ coupled with a sadistic bullying streak.

Now those guys were dirty or just plain mean, but there are others. We had two new cruisers totaled in February when a couple cops decided to drag race each other. One lost control and collided with the other. Both wound up in the woods. That was just dumb.

Police work is not a nice job, and some of the people doing it aren't very nice either. The caliber of people doing policing isn't that much different from those in the sanitation department, except the cops are issued guns and a badge which grants them the power to order other people around. Some handle that power well, some don't.

At least the ones I train wind up knowing how to shoot. There was a case last month in Atlanta where a cop and some unknown civilian got into a shootout. A total of 21 rounds were fired from a distance of less than 10 feet, 17 of them by the cop, IE he emptied his Glock, neither party was hit. Sheesh! The civie got away too. I tell my guys that it doesn't matter how fast you can miss, only hits count. If you don't *know* where that bullet is going, don't pull the trigger.

Teen held in death of officer
Youth, 2 others were in U.S. illegally; chief to seek death

The Arizona Republic

Officer Marc Atkinson

By Steve Yozwiak
The Arizona Republic
March 28, 1999

A teenager who entered Arizona illegally from Mexico confessed Saturday to the ambush-killing of Phoenix police Officer Marc Atkinson, authorities said.

Felipe Petrona-Cabanas, 17, was booked into Maricopa County Jail for investigation of first-degree murder, attempted murder and aggravated assault.

He was transferred Saturday from a hospital to Phoenix police headquarters for questioning after being wounded in a gunbattle Friday with a citizen who came to Atkinson's assistance. Sgt. Mike Torres, a police spokesman, said police would not make details of Petrona- Cabanas' statement public Saturday.

2 killed in shootings by police (3/18)

Torres said the armed citizen, Rory Vertigan, probably kept the gunman and two other armed men from fleeing to the safety of their hometowns in Mexico. The other men also were arrested and held on lesser charges.

Traces of the shooting were visible Saturday afternoon at the site: A bloodstain was on the road where Atkinson's car crashed into a power pole. A bullet hole was in a wall at the side of Bristow Optical.

But other aftermaths were less visible.

Parents from nearby neighborhoods voiced new fears.

"Daytime is when when you feel safe letting your kids out to play," said Linda Rodriguez, whose family lives about a mile from the shooting site.

Belinda Milburn of Phoenix, a teacher's aide, dropped off a basket of mums at a makeshift shrine at the shooting scene.

"We know there has been a war over drugs and crime but they are being so blatant here," she said. "This was not a shooting -- this was an assassination."

It all started simply enough on Friday afternoon.

Atkinson and two other Maryvale precinct patrol officers followed through with a police initiative to crack down aggressively on drug dealing.

Based on a tip, the three officers went to the Scoreboard Tavern, 2831 N. 35th Ave., where police believed drugs were being dealt in the bar parking lot from a white Lincoln Continental.

But Atkinson, 28, and the others were unable to determine who inside the bar had been driving the car.

As the officers waited for the car to leave, two of them were called away on other assignments, Torres said. He gave the following account of Friday's events:

When three men emerged from the bar and got into the Lincoln, only Atkinson was left to tail them.

They got a good head start. Atkinson barely kept the car in sight as it rapidly turned east on Thomas Road, north on 31st Avenue, east on Catalina Drive and north on 30th Avenue, where it stopped in the middle of the street.

Atkinson, who had patrolled the neighborhoods of West Phoenix for five years, briefly lost sight of the car before he turned north on 30th Avenue, his vision blocked by a building.

By the time Atkinson turned, Petrona-Cabanas had already jumped out of the driver's seat and had drawn his .357-caliber revolver.

Atkinson never had time to draw his own pistol. Petrona-Cabanas fired at least twice, striking Atkinson twice in the head as the officer sped by, eventually ramming his squad car into a light pole.

At that point, Torres said, the three men could easily have disappeared.

But behind Atkinson was Rory Vertigan, who saw Petrona-Cabanas shoot Atkinson.

Vertigan pulled to a stop behind the Lincoln, got out of his car and exchanged gunfire with Petrona-Cabanas. One of the shots from Vertigan's Glock 31 pistol wounded Petrona-Cabanas, piercing his left shoulder from behind.

Petrona-Cabanas collapsed and later was taken to a hospital.

Police Chief Harold Hurtt said Vertigan's actions were legal, because Vertigan believed he was acting to prevent imminent harm to himself or others, the general rule for lawful use of deadly force. Hurtt praised Vertigan as "one of the true heroes of our time."

The other two men in the Lincoln -- Oscar Garcia-Martinez, 22, and Oberlin Cabanas-Salgado, 26 -- also got out of the car and began to run. Garcia-Martinez carried a pistol. Cabanas-Salgado had a shotgun. Neither, however, fired his weapon.

They tried to hide, but they were soon captured after witnesses pointed police in the direction they tried to escape.

Christine Keith/The Arizona Republic

Wearing a hospital gown, Felipe Petrona-Cabanas, 17, is escorted from Phoenix police headquarters. He was booked into Maricopa County Jail on Saturday for investigation of first-degree murder, attempted murder and aggravated assault.

One man was captured in a restroom of Bristow Optical on the northwestern corner of 30th Avenue and Catalina. The other was captured nearby.

Police discovered as much as a pound of cocaine in the Lincoln. The drug was already sorted into one-eighth-ounce bags known as "eight balls," a common quantity that is easily exchanged without detection between dealers and users.

Petrona-Cabanas was taken to Good Samaritan Regional Medical Center. He was released from the hospital Saturday, questioned at Phoenix police headquarters and then booked into Maricopa County Jail.

Torres said that Petrona-Cabanas was read his rights, but there was no attorney present during his questioning. Torres anticipated that the courts would appoint an attorney for him.

Garcia-Martinez was held on an outstanding warrant for investigation of failure to appear in court on a previous drug charge.

Garcia-Martinez and Cabanas-Salgado were held for investigation of entering the country illegally and illegal possession of firearms.

Hurtt said he would personally pursue the case against Petrona-Cabanas and see that he was prosecuted to the fullest extent of the law. If Petrona-Cabanas is found guilty and is sentenced to death, Hurtt said he would request to be present for the execution.

Meanwhile, investigators were trying to determine why Petrona-Cabanas had such a violent reaction to Atkinson's pursuit.

Phoenix police said the men all come from farming communities near Acapulco in the Mexican state of Guerrero. They told police they had come to the United States to find work, but could not get any.

Petrona-Cabanas has been in the United States about seven months. His cousin, Cabanas-Salgado, has been here for three months, and Garcia-Martinez has been in this country for perhaps three or four years, police said.

The timing of Friday's attack was curious, police said, because a large-scale surveillance of West Phoenix drug stash houses has been ongoing for weeks by the Joint Drug Intelligence Group, made up of federal, state and local police agencies.

Torres said extensive drug surveillance usually traces the source of drugs in the Valley to rich, powerful families in Mexico. Often, he said, illegal immigrants who cannot find work in the United States are recruited to sell smaller quantities of drugs on Valley streets.

Hurtt said Phoenix police were not pursuing any other particular individuals who might be connected with the killing of Atkinson.

To help heal the deep psychological wounds inflicted on the Valley's law-enforcement officers, and the community at large, Hurtt on Saturday ordered upwards of 120 additional officers onto the streets.

Hurtt also called on motorists to drive night and day with their headlights on, at least for the next few days, as a show of support for law enforcement throughout Maricopa County, which this month has had four officers killed or wounded in the line of duty.

Officers began wearing black bands of mourning Saturday across their badges, Hurtt said.

"This could have happened to any one of us," he said.

Republic writers Maureen West and Mark Shaffer contributed to this article.

I used to be a CB'er. Some of the people I met on CB were very good people. The rest were pure A******S. Most of the good people on CB were amateur radio operators and helped me along in getting my license. Not all CB'ers are bad. Amateur Radio has its share of rotten jerks as well. Take some generals and up for example whose mission in life, apparantely, is to bash no-coders. I am a no-coder, but I am studying my code and theory and I will upgrade to Extra.

I don't talk on CB anymore. Everyone I used to talk to on there has gotten sick and tired of trying to have a decent conversation with the good people who DO EXIST on 11 meters and have left that band all together.

My point is that not all CB'ers are bad, but not hams are good either.

I think we are going to be putting that theory to the test here shortly,
Gary. I die a thousand death's when individual's see us as intruders on
foreign soil, thinking that we as Americans 'go blindly' while others burn
our flag in retaliation.

Burn my flag today... Tomorrow I will 'still' have the courage of my
convictions to stand my ground knowing that for all it faults, this country
is 'still' the land of milk and honey, and if other's could, they too would
model their government's after that of ours.

The unarmed sheep are on the ground now, and I think they are being lead to
the slaughter!

>WATT amplifier. (Not sure if these numbers are fabricated, or what)
>

well, OK, lets do the math...

70 kW output...let's be charitable and say they have 50% efficiency when
transmitting AM.

so they have a power requirement of 140 kW and change.

Of course, that's just the finals. to get from a 4 W radio to 70 kW
(something like 42 dB) is a lot too.

And there's all that heat to get rid of.

And the size of a 20 kW system isn't small...

If we have to get power from 240 V, you need around 60 A.

If you believe they run on 12 V, then they only need 11.7 kA.

And if these guys really run that power for any time at all, they must get
interesting power bills -- wonder if they have to do power factor correction
as well..?

What better way is there to start off your morning except by drinking a cup of coffee using your very own CALLSIGN MUG. See at http://home.earthlink.net/~jawjabber
All mugs are made with quality control in mind. They are dishwasher and microwave safe and if after you receive your mug you are unsatisfied just send the mug back in its original shipping container and I will refund you the cost of the mug. See at http://home.earthlink.net/~jawjabber for details.
If you what to buy your personal callsign mug all you will have to do is send a check or money order for the amount of the mug plus $4.00 for shipping. Remember to send your callsign so I can place it on the mug.(The mug you see on my web sit is just a sample mug. Your callsign will be placed on the mug you order.) Please USA orders only. See at http://home.earthlink.net/~jawjabber
To see a picture of the Callsign Mug and to get the order forms please click on the link below.

This guy doesn't seem to respect cops. You can find him in the ham radio
newsgroups. I told him what I think. What do you think?

This guy continues to badmouth cops while he professes to train them. I'm surprised any departments would hire him with this attitude. This string started on a ham radio group. I though I'd cross post it into a group that is on topic and get it off the ham radio group.

I think that he meant to quote from Shakespear's "Merchant of Venice"...I
believe Shylock's (the Jewish money lender's) words were: - "If you prick us
do we not bleed?" Shylock was reminding the court that Jews are human
because they can bleed like anyone else. So can dudes and Serbs. I dunno if
he meant to be a prick, which in the US slang has quite a different
connotatation...as does the British expression "Be firm my pecker!" which
means to Englishmen, "Let me take courage!" I have heard Limeys yell at a
soccer match ..."Keep your pecker up!!!" Now lots of meanings can get lost
to a translator who is not literate in the culture of a language, which often
includes literary references. Hmmm...maybe a good English speaking Ham
operator should "Brush Up On Shakespeare" and G&S.

> > When we are contested do we not QSL ?

From Radio Yugoslavia web page:

http://www.beograd.com/radioyu/

~~~~~~

THE YUGOSLAV CITIZENS' MESSAGE TO NATO WORLD CRIMINALS

Radio Yugoslavia is informing its listeners and Internet users throughout the world that the aggression against the Federal Republic of Yugoslavia has dramatic proportions. Murderers and criminals, organized under the name of NATO, are shooting at civilian targets in our country. The reason for doing so is obviously to inflict material damage on the economy, roads and all other assets. Their desire is to destabilize our country and undermine the unity of our people, army and state leadership, and to try to conquer us.

Such an aggression and bestiality have not been seen since the time of concentration camps in World War II. The criminals' missiles are falling on schools full of children, hospitals with people being treated in them, roads are being destroyed so that many places are being left without food. They are bringing down transmission lines, so as to leave the people without electricity, and using chemical weapons in order to cause as great a pain and suffering of the population as possible. They are cutting the major waterworks and targeting factories using chemical raw materials. It is the Serbs, Montenegrins, Albanians, Turks, Muslims, Gorancies, Romanies and all those living in our country that are suffering the consequences of the acts by NATO criminals. Bill Clinton and his collaborator - Javier Solana, are justifying all this with the need to protect democracy. The message of all the citizens of Yugoslavia, the Serbs, Albanians and Montenegrins alike, to them is to stop protecting our democracy. Our state is eight
~~~~~~

centuries older than the United States. All Yugoslav citizens say to them that they will
remain steadfast in support of their army, their state and their president, Slobodan
Milosevic. And a message to them from all the citizens of Yugoslavia is that we never lost
wars and that our retaliation against those who had attacked us, has always been painful.

Ok,
let's lay this one to rest here. The issue at hand is not weather or not we should be able to have guns, but weather or not we are going to keep giving up our Constitutional rights. As American citizens, we are endowed with certain rights as set forth by the constitution of this country. A constitution that was written by men who had far more intelligence and forsight then any of the morons presently in power today. If we give up ANY of these rights it sets the stage for the powers that be to pick and choose whatever right they want to violate in the future. Where will it stop? Will you soon have to file an environmental statement to fart? Will you be thrown in jail for having any dissenting opinion? How long before we end up nothing more then a cowering mass at the mercy of the govenrment's every whim? If you look at a lot of what has been tried, with respect to censorship and the like, you can get an idea of the supressive agendas a lot of polititions (and their wives, Hello Tipper G.!) have. No, the issue here is not wheather or not to bear arms, the issue here is weather or not we are going to let our constitutional rights be eroded away for the sake of expediency. Anyone who believes unarming american citizens is going to cure all gun related problems is a fool. Criminals and bad people will always be able to procure weapons. It will just mean that joe average will no longer be able to buy a shotgun or hunting rifle at the local Wal-Mart.

Problems are extremly rare,anything important is safe but you could
run into some TX coming from your stereo speakers but thats easy to
solve.I run VHF and HF 10,11,12,15,17,20M 5 hours a day 6 days a week
and have never run into a problem with a freq.Just think of the RF a car
passes thru everyday.AB7RS

Will White wrote
>I'd counter that 40M would be the place to start. Good DX at night, short skip during the day, and most importantly, there is more QRP activity on 40 than any other band.
>Will White, KD7BFX

40 has always been my favorite all around band. But in recent years it has been hard to find a CW contact between 10AM and 4pm (in the southwest). No one seems to be on. There is usually a lot more stations heard on 20 during those hours. I'm not sure if it's the fact that 20 covers a larger area, or that 20 is a more popular CW band. I guess the band choice depends on when the original poster plans to operate his QRP rig. Since 10 meters has been open, I think it would be a good daytime choice. You could have DXCC/QRP there in no time.

When I was a kid, my tube transmitters used plug in coils for all band operation. I'm surprised the (cheap) QRP rig manufacturers haven't used a similar design...

7350. Inappropriate Post? (Rock-Sea Dials)

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-29 00:00:00 UTC
From: rockseaent@aol.com
Message-ID: <19990328194449.12226.00001457@ng122.aol.com>
Source record: 146921

Earlier today I posted a message to this newsgroup indicating that we were no longer taking orders for certain types of reproduction dials (below). I received a flame minutes later (first one in four years) (also below). We are however, particularly sensitive to inappropriate posting and certainly do not want to offend anyone or "abuse" readers.

I would appreciate your attaching a reply to this thread, or sending me an e-mail with your opinion. We will abide by the wishes of the group, naturally. We have always respected the type of posts for rec.amateur and have never posted there. If you feel that there is a more appropriate forum for the post I made today, or our usual monthly post regarding those dials we've added, please let me know.

Thanks, Mike

Please cancel the commercial abuse of this newsgroup.
Thanks.
{adding yet another spammer to my blacklist}

-- Original Post --
Subject: "New" Radio Dial Scale Additions

We currently have dial scales for over 600 antique radio models in stock and ready for delivery and have maintained a rather wide door for the types of dials we will accept for new additions to the line. The response has been great, and we surely appreciate the many of you who have sent dials to us for reproduction.
During recent months the backlog of orders for new additions has grown to an overwhelming level. This is a very uncomfortable position as it will take much of this year to complete these dials. Unfortunately, we can no longer accept orders for new dial additions for the balance of this year.
We will, however, accept a few orders for certain dials. These include dials where a significant amount of artwork is on hand, dials which are in unusually high demand, and those with artwork supplied by the customer. If you would like to supply artwork, call for requirements.
Quite often a dial is used in more than one model. We may have the dial in stock but may not have it on our list. If you need a dial that's not on our list, please send the make and model number and a photocopy or .jpg and we'll

be happy to check for you.

Thanks, Mike

SURE it will. Sounds to me like the same flimsy argument that's used for keeping the code requirement in place; i.e. Morse code is used as a "filter" to keep the "undesirables" out of amateur radio. All one needs to do is listen to 20, 40 or 80 meters to hear what a POOR job the code requirement has done of keeping "stupid people" out of the ham bands.

Try "hum Jammer" You'll need MP3 spy and WinAmp. Several San Francisco Bay area repeaters were on last night. You can follow the war started by Rolly Hollywood's illegal shutdown of the K7IJ repeater system in Berkeley, CA. Ever since the k7ij system went down most of the high level repeaters in northern california have been JAMMED by irate HAMS and bootleggers. Automated jamming devices in remote locations are all over the place. See the www.N6YSA.com website for the whole story.

Mike - Seems like the Radio Shack stores in Canada tend to carry stuff that has been discontinued down here in the states....for example, my xyl and I spent the weekend at Niagara Falls last October, and we checked out the local Radio Shack store there....I was surprised to see that they still carried the DX-394 short wave receiver and at full retail price to boot! That rig had been off the shelves down here for at least a year, maybe more. The question is, does the Canadian market lag that much behind the US market, or is Radio Shack just dumping discontinued stuff on you guys to see if they can cut their losses? Jay N3DQU.

I built the ten tec six meter xvtr. Went together well and was easy to
follow. Assuming you know what your looking at that is.

As for the band. Id suggest 10mhz for a clean, clear band. Good day and
early evenings. Although activity is a bit lite. 40 is a good choice, with
good activity day and night.

Dan/W4NTI

Dear Clark,
If you have an HF radio or shortwave receiver you might try
this site to find W1AW's schedule:

http://www.arrl.org/w1aw.html

If you do not have a radio, you might go to the ARRL site for
general information:

http://www.arrl.org/

Have a great day!

Lots of alternators in series in and of itself would be in interesting thing to observe - not to mention the speed control on the engine that provides the hundred or so horsepower just to drive all those alternators. I think this makes the 1,500-speed bicycle I saw pale by comparison!

7384. Re: Attention, Illegal Operators: The Party is Over

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-29 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <36FF8EAD.C32@dirtball.com>
Source record: 146955

Well
Its about time that the FCC started to do something about illeagal
operators. These guys that don't respect the band plan should be busted.
I also feel that the presant day band plan should be changed. There are
enough of us that we should be able to petition the FCC and congress and
make changes in the system to acomadate everyone. Lets face it CB radio
has become no more than a hobbie. Alot of us in the Amateur Radio
Service come from there. We became hams for one reason or another, I
will be willing to bet that most us that came from the CB ranks did so
so we ould do different things that were illeagal on the CB band. I say
we let the CBers become a beginner ham class and go from there. See My
Band Plan
http://www.dirtball.com/band.html
Lets give the people what they want! This is a contry run by the
people, for the people.
I also want to thank the people in the FCC who have taken on this can
of worms. The Amateur bands have gone far to long with out enforcement
which has cause many good amateur radio operators to take the law into
their own hands, thus broke rules themselves. So I hope this a wave of
things to come and we go in to the 21 century FCC and Amateur radio hand
in hand. I think the Service as whole will become a better service. I
also think that more should be done to make 11-meters more accomadating
to the people. I also plee for the broad use of the FRS. Sales of base
stations moblies as well as the hand helds they have today. What is it
14 channels maybe opening it up to 23 channels, allowing local (State
police) authorities to police it. give it more power say 25 watts and
open up a real CB service as it was intended to be. This would allow for
the CB radio to be anexed by amateur radio (I mean thats all it is
today a beginers version of ham radio). That is just my opinion.
I hope the enforcement continues
73 from Oris

What is this about women, children and the elderly? What about the people your people are tossing out of their homes and what about the children's fathers in which your serv bothers are killing. Just like Iraq, and Jimmy Obrian. Attack the innocent then when you get hit back you cry foul! So my sujestion to youi is stop the killing in Kosovo and pull your murders out and allow those people the right to their own peaceful lives. It sounds like you have been killing them and stealing there property since the begining of time. Also what is this crap with blaming this all on American's this is a NATO operation not a American operation. You have to remeber your Yugoslavia is a Euroupian problem not a Amercan problem. I want to know why your government wants to kill these people and steal their homes from them, burn whole towns what's that about? I also want to know why the Russians would allow such carnage, and why they are so upset. They want to to go back to talking. Why wern't they included in talking. Why hasn't the Russians help in this matter. Now they are crying about the bombing. I say this to you I don't think that you would stand a chance if we send NATO toops in I would strongly sujest that you pull out of Kosovo and chill! Your fixin to die a horable death. Your solders will be like the Iraq army beggin to be capurted and you will have no more toy solders to play with. Anyway all you have to do is stop killing these people and kicking them out of there homes. All you have to do is just stop. Thats all. Whats the problem with that? That's just my opinion
Learn peaceful exstance

From: johnwunder@my-dejanews.com
Message-ID: <7dodqshck1@nnrp1.dejanews.com>
Source record: 146961

I have two photoelectric smoke detectors that are part of a monitored alarm system. I have determined that they are not FRI proof (not FCC part 15 either). They go into alarm with 350 Watts on 20 meters (antenna is beam at 50 feet). I tested them temporarily on 9 volt battery power (not wired to system) and they still trigger at about 350 watts. Has anyone found solution for this? Are there any part 15 detectors for monitored systems? I have contacted the manufacturer (ESL, Sentrol) and they are looking into this. They also make Ion Detector type units, that they believe are less sensitive to RF. I appreciate any info on your experience in this area. 73's - John/WB5NUA

The only country that jams foreign broadcast is North Korea (as far as I know). I guess Javier is suggesting to invite North Korea in Nato. That way they can legalize jamming.
You must be very insecure in your convictions Javier to think that people should be deprived alternative source of information. You think that we need to be brainwashed every day and every hour or (god forbid) some of us will suspect that whole thing is bogus. If not Serbian TV we even would not know that F117 was shot down.

<<Lots of alternators in series in and of itself would be in interesting thing to observe - not to mention the speed control on the engine that provides the hundred or so horsepower just to drive all those alternators. I think this makes the 1,500-speed bicycle I saw pale by comparison!>>

I think the original comment was that "the practictioners of high power cb's must get big electric bills" or something similar. My answer is that these guys are using mobile installations, not fixed stations, hence no electric bill. And yeah, they need to redline the vehicle's engine to produce their high power signals. Sounds like the transmissions can't be too long in duration.

Anyway, if you enter "keydown" in your search engine you'll find a half dozen sites where the proud owners/operators of these illegal transmitters pose for pictures and boast of their exploits.

<the story is not believeable because the numbers are so far out of wack>

The numbers do seem inflated. Don't know if the "70,000 watt output" figure is true or not because I don't know how they are measuring it or what they are measuring. Some sites mention melting antennas etc.

7400. VHF/UHF Transceiver Installation in Passat ?

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-29 00:00:00 UTC
From: wtshyman@mb.sympatico.ca
Message-ID: <7dmg74$j22$1@news1.mts.net>
Source record: 147019

I've just bought a '95 Volkswagen Passat and I'd like to move my dual-bander into it. I'm a little leery of putting a transmitter in a car with so much electronic stuff in it; ABS, digital dash instruments, etc. I don't plan on running a lot of power - 40 watts on 2 metres. (I've read about people who've blown out the instrument cluster on the '96s, usually by boosting the car when the battery runs flat).

A quick look with Altavista and Dejanews doesn't show anything much for "Transmitter" and "Passat". The last VW I ran the radio in was an '86 and the most complex electronics on that car was the broadcast radio - the technology has changed a bit since then.

Has anyone got any horror stories about similar installations that could save me needlessly blowing up some expensive parts ?

I already know the standard drill about grounding everything, use good co-ax, keep the antenna away from the electronics as much as possible (I'll likely go with a trunk-lid or rear bumper mount), run the transmitter power wires right to the battery, and snap on RF chokes everywhere. Is there anything else that comes to mind ? I've also ordered the VW shop manual both for it's own sake and to see what recommendations it may have.

Hello. I have a 106ft tower and several beams that I hope to put on the tower. I'm planning to use some TIC Ring Rotors on the tower, so I can mount the antennas at any height on the tower. Please let me know if you have any good height recommendations for each of these beams. I'm interested in knowing at what heights I should mount them for best performance. Any and all help is appreciated. The antennas I plan to use are:

-2 Element 40m Beam
-5 Element 20m Beam
-5 Element 15m Beam
-5 Element 10m Beam
-3 Element 12m/17m/30m Beam
-30 Element 6m-1.2 GHz Log Periodic (Mounted Vertically)
-30 Element 6m-1.2 GHz Log Periodic (Mounted Horizontally)

You can't make a silk purse out of a sow's ear. I have a 599zxx and I do use it (with a 1000D), occasionally. I will not, post-detection (and in fact, no audio DSP unit can) separate the wheat from the chaff. Yeah, it helps.... a bit, but for for the bucks??? You really have to think about it. I agree, try before you buy!!

7407. QST magazine Indexes

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-30 00:00:00 UTC
From: turinib@wdni.com
Message-ID: <37012305.928394@news.weyer.com>
Source record: 146826

Does anyone know of a source of indexes for QST, HR, and 73, CQ, etc?
The ARRL has indexes from 1970 or so. I thought that someone was
selling indexes going farther back. Anyone remember who?

Also, I'm looking for bibliographies of articles for BAs, i.e.
Johnson, Hammarlund, etc.

Thanks

Bill Turini KA4GAV/7 turinib@wdni.com

Always looking for Signal/One Accessories, equipment, publications,
advertisements, etc.

7408. Re: Will this be a "bust" solar peak???

>Common sense and arithmatic tell me that the peak won't occur until 2002
>or 2003. And todays flux value bares that out.

It's very hard to peg down solar activity, remember, the 11 year cycle is
an AVERAGE and NOT exact. The cycle has been anywhere from 8-13 years
in the past. Activity is way down this week. Next week it could be way UP. The
lastest I've heard is around 2000 or 2001. My data shows the last minimum
occured in 1996, in the fall. So only about 3 years have passed so far.
I believe (at the moment) it'll occure sometime in 2000 or 2001. There really
is no exact way to predict it.

There is a downloadable index, somewhere. Got it about a year ago and
put it in my PalmPilot. Problem is, I don't know where.

Will send you a message if I locate it.

Scentists on tv are showing the sun with its big S spots and sayeing
that all kinds of hard radiaion coems out of them when they become sun
spots. They brake sattlites and mess up radios and I wonder if the
slower flares could hit us on the ground? There are pple in my trailer
park who are scared of that stuff and I thought I woud ask the experts.

And still may; but I'm hardly one to know. They even freely admitted
doing so -- one of their standard arguing points against it was that
it did nothing but waste US taxpayer money since the signal was jammed
when it got to Cuba anyhow.

Electricity shortages, if anything else, may have put an end to the
jamming.

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated March 13, 1999

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

APRIL 1999

April 11 (Sun): Middleton, WI. Madison Area Repeater Association. 8 AM - 1 PM Middleton Conference Center, 1313 John Q. Hammons Drive Middleton, WI 53562. The Middleton Conference Center is located in Middleton, WI, near the west side of Madison, WI. From the intersection of Interstate 90 and Highways 12 and 18 near Madison's South-East corner, take Highway 12 West. Stay on Highway 12 until you reach Greenway Blvd. Exit to Greenway Blvd. and turn left. Then turn left on John Q. Hammons Drive. The Conference Center is attached to the Marriot which is clearly visible from the intersection of Highway 12 and Greenway Blvd. Talk-in Frequency: 147.75/.15. Info: Paul Toussaint, N9VWH, MARA President, prt@execpc.com. The MARA telephone voice mail (608)245-8890 . http://skywarn.ssec.wisc.edu/mara/swapfest

Apr 17 (Sat), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Apr 18 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

April 25 (Sun): Galva, IL. Area Amateur Radio Operators Hamfest. When: 8 am until 2pm, April 25, 1999. Where: The National Guard Armory Tickets: Advance tickets $5 double stubs, at the door $5 single stub, No advance sales after March 25th. Outside flea market space available. Electricity, available on a first come first serve basis. Bring your own extension cords. VE Testing will be available by appointment only. Talk in 145.4900 - 88.5 PL / 146.460 simplex. Breakfast and Lunch will be available and served by the National Guard Relief Members. For set up times, advance ticket sales or other information, contact: (1) Bill Anderson WB9TEW, 103 SE 2nd Ave. Galva, Illinois 61434-1854.

tel. 309-932-3023, bill@inw.net. (2) Tom Davis N9OSP, 802 Rose Street, Kewanee, Illinois 61443. Tdn9osp@cin.net

April ?? (Sun): Stickney, IL. Dupage Amateur Radio Club, Hawthorne Race Course. Hours 8 AM - 2 PM. Setup 6 AM.

MAY 1999

May 1 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, Info: Joe Holly, AA9HR, 1702 Holly Ln., Grafton, WI 53024, 414-377-2137

May 2 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $?. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: w9icu@tbcnet.com. (Nice mid-sized hamfest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facilities - AJ9S).

May 14, 15, 16 (Fri - Sun) - Dayton, OH. Dayton HamVention. See http://www.hamvention.org

JUNE 1999

Jun 6 (Sun), Princeton, IL - Starved Rock RC. info: Frank Carraro, KF9NZ, PO Box 198, Leonore, IL 61332/ 815-856-3773. http://www.qsl.net/w9mks/ E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 13 (Sun), Wheaton, IL - Dupage County Fairgrounds. Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1999

Jul 11 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. Admission $5 at the gate. Take I-57 to Peotone Exit 327 (east). 146.94 MHz (-600) talk-in. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com. http://www.geocities.com/capecanaveral/hangar/5711 For Reserved Tables and Advanced Tickets, send check (payable to KARS) and S.A.S.E. to: CHIP MOORE, K9IOC, 289 S. Euclid Ave. Bradley, IL 60915, E-Mail: chipm@megsinet.net or to BILL DESALVO, W9OQW, 403 Birch Dr., Shorewood, IL 60431. 815-744-5099.

Jul 18 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL

60510-0673. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy with easy access from US Highway 24. Admission $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. For additional information contact N9JF, jfunk@adams.net

Aug 8 (Sun), Peotone, IL - Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. E-mail: nf9n@aol.com. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1999

Sept 25, 26 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

Someone recently asked John Cleese of Monty Python fame what the differences were between the English and Americans. He said:
1. We speak English -- you don't.
2. When we have World Championships -- we invite other countries.
3. When you meet English royalty you only have to get down on ONE knee.

I have used a Timewave DSP-59+ with a TS-850 (among other rigs) for several years, and I really like the combination. I mostly use it for ragchewing and digital modes, but occasionally for contesting and DXing. I would still recommend the appropriate optional filters in the 850, but the DSP unit really does make a difference.

I have a TS850SAT with the 1.8 KHz and 500 Hz filters in the first IF
and a 250 Hz filter in the second IF.

My TS850 seems like an excellent cw rig. I purchased the Timewave 599zx
and like it the best on cw. However, my timewave will sometimes blank
the signal out on cw rx if there is another very strong signal nearby.
Has anyone else had this experience? I can usually rx while it
is blanking out by selecting my narrower IF filters or by pressing the
BYPASS button.

My TS850SAT has never been very great during SSB phone contests. I
usually have to use the AIP and engage the Attenuators to keep nearby
stations from eating the rx alive.

Just looking at the cycle and comparing it to others,which is all anyone
can do,I feel like it will be a poor low peaking cycle regardless of
when that peak happens.I hope I'm wrong. AB7RS

7425. Galaxy II

I need to find copies of manuals for the different PL tone boards as used in the Johnson PPL 6000 series radios. These are adjustable by a 10 turn trim pot with resistors that are clipped to change ranges. I need to repair one board and change the range of the other.. One has ED-32 on it and the other has 35431-1. Please respond with email directly to my address. Will gladly pay and copying/shipping costs. Even can use fax or email attachment. Thanks Don KB6GQA

Joseph A Rodgers wrote
>Is anyone using a Timewave DSP unit with a late model HF rig

I origionally got the Timewave for my TS50 (which has the optional CW filter). It works great on CW, but was next to useless on SSB. I tried it on my TS870 and it made no improvement at all. Perhaps that was because the TS870's built in DSP did the job...

7428. CELLULAR ACCESSORIES CHEAP!!!!!!!!!

CELLULAR ACCESSORIES CHEAP!!!!!!!!!

I have the following brand new accessories.

1)Leather cases with belt clips and plastic protective covers $15.00

Audiovox CM3000, MVX-502

Nokia 5120, 6120 , 2160, 2180

Motorola Profile 300, Startac (amps)

Nextel i1000, i370, i390

Qualcom QCP 800, QCP 1900 QCP820, QCP2700

Sony CM-M13004-ATH

2)Car Lighter charger $15.00 (with IC chip)

Audiovox CM3000, MVX-502

Nokia 5120, 6120 , 2160, 2180

Motorola Profile 300, Startac (amps)

Nextel i1000, i370, i390

Qualcom QCP 800, QCP 1900 QCP820, QCP2700

Sony CM-M13004-ATH

3)Portable Hands Free (Earphone amd lapel mic) $15.00

Nokia 5120, 6120 , 2160, 2180

Motorola Profile 300, Startac (amps)

Nextel i1000, i370, i390

4)Portable Hands Free (Earphone and Boom Mic) $15.00

Nokia 5120, 6120 , 2160, 2180

Motorola Profile 300, Startac (amps)

Nextel i1000, i370, i390

5)NIMH Batteries 39.00

Nokia 5120, 6120 , 2160, 2180

Motorola Profile 300, Startac 49.00 (amps)

Nextel i1000, i370, i390

Qualcom QCP 800, QCP 1900, QCP820, QCP2700

Sony CM-M13004-ATH

6)Vibrating NIMH Batteries 49.00

Nokia 5120, 6120 , 2160, 2180

7) Antennas 15.00

Nokia 5120, 6120 , 2160, 2180

Motorola Profile 300, Startac (amps)

Nextel i1000, i370, i390

Qualcom QCP 800, QCP 1900

Sony CM-M13004-ATH

E-Mail me to make for further information

Actually, Cuba is engaging in regular jamming of Radio Marti's
broadcasts...and if you give a careful listen, you'll hear "bubble" jammers,
"bird" jammers, and the infamous "Mayak" jammers...still on shortwave. Well,
at least the Russian Woodpecker is quiet!

By the way, George: Your software for the RX320 is *damned* impressive.

Hello All,

I have a Ham Radio & Electronic Web Page with
tons of Resources!!!
I have info on: Satellites, Satellite Tracking, HF,
VHF, UHF, Yaesu Stuff & FT-847 page, My HF Rig reviews,
Classifieds.... Plus many other goodies!!!
Come, and check it out.... The URL is:

http://kq6mu.8m.com

Please feel free to E-mail me or sign my guestbook.
Thanks & 73,

Mike Green

Cross-posted to: alt.ham-radio.dxing,alt.ham-radio.hf,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Is anyone using a Timewave DSP unit with a late model HF rig such as the following:

TS-850, 870
TS-440-450
FT-890, 990, 1000MP, 1000D
Omni V, VI
IC-761, 765, 781

I would be interested in your comments about how well the Timewave unit works with the receiver audio in these rigs. Do you think that it makes your radio a better radio in that it is easier to use, easier to pull out weak signals, whatever. Do you use rig for ragchewing, DX, contesting?

Was the TImewave unit worth what you paid for it?

South Korea also jams broadcasts. However, if you want to jam effectively, you have to place transmitters for jamming close to the reciever.Only small countries with tight control over their population can close off the broadcasts completely. Also, the woodpecker was not a jammer, but over the horizon radar.

I agree any idiot can get 20 WPM. You are an idiot and you got 20 WPM. Why don't we raise the level to 35 WPM and that will keep all assholes like you off the ham bands. Then you can go and kiss somebodys ass to get your 2 watt xmitter on the CB bands. Your cw most likely sounds like your mouth .... shitty. CBers have just as much right to the airwaves as you, you pompous asshole. You must be a twin because no one person could be this stupid.

hams have used the internet before this all came out but you still need a
license to use the frequencies that is being transmitted on..

Hi Chris - You must place a small capacitor in series with the mic lead to block the 8 VDC when running Heil with Icom. I placed a .47 mfd (per Heil) in series with my HC5. I use it with a 706 MK2. It works fine, but need to have mic gain set to max. On the air reports indicate very good audio. If you try this and can't get enough gain, a preamp may be necessary.

Hi Joe -- I have the DSP 599ZX and the TS-850SAT. I use it for DXing
mostly, some contesting. It is absolutely superb for slicing up CW
signals. On SSB where there is noise and atmospherics -- it has enabled
me to pull out signals that were in the ESP category. Highly recommended
from this end. However like all things -- I suggest you borrow one and
try it out for yourself.

For example: a fellow DXer here loves his xtal filters -- I hate em --
ring ring. Not so with DSP unit -- but he hates fiddling with controls
-- so to each his own. Before I got the Time Wave -- my CW operandi was
to use CW Reverse setting on the Kenwood (with no xtal filter) -- when
the pilup was too close to the DX station (usual case).

To my ears it beats any of the built in DSP units I've heard -- but
haven't tried them all yet.

Is it worth it -- depends on if you would use it regularly -- I guess --
I do.

Message-ID: <3700FB61.8509D554@nightmail.com>
Source record: 146907

<SNIP>
(1) The problem is not with "No Code Techs", it's with poorly trained
No Code Techs. THEY don't realize until they've made a fool of
themselves on the air that the "classes" did absolutely NOTHING to
prepare them for operating an Amateur Radio Station properly.

I guess making mistakes gives one experience. If an experienced ham has
corrected a newbie's mistakes, all well and good. If a knowledgable ham
does nothing but complain, then the problem is with the *experienced*
ham community not the new individual. I read the ARRL book as well as
West's prior to taking my test, but neither reference can prepare one to
actually put a microphone to their mouth and talk.
So instead of whining about Gordon West, maybe ham clubs can give
in-services to new hams. How about these clubs getting a mailing list
from ARRL of new hams in their area and sending them a newsletter or a
letter from an Elmer welcoming them to amateur radio?

Let me give you my comments as a newly minted Tech licensee. I have
contacted three ham clubs near my home, as you put it...the realm of His
Highness West, and not one individual has returned my e-mail or phone
calls. Either these clubs have no interest in new members or their mail
procedures are as faulty as *poorly-trained Techs.* I'm not going to
keep calling or sending e-mails until someone responds. So I've given up
trying to contact a club and will go solo. If I make mistakes on the air
and spew more *garbage* into Southern California repeaters it's not
because I didn't try to get someone to help me.

So in-closing I want to thank the experienced and knowledgable ham
community, specifically Montrclair and Riverside, for your lack of
welcome and interest.
CINC
My call sign doesn't really matter.

Source record: 146910

Come on! A solar flux of a 103??? And we're suppose to have this great solar "peak" next year? Simple math tells you George Jacobs is off on this one!

If you recall, these great scientists all told us that 1989 was the peak of the last cycle, although we had a higher flux peak in 1991. We also had a secondary lower flux reading as late as two years ago this July. Common sense and arithmatic tell me that the peak won't occur until 2002 or 2003. And todays flux value bares that out.

Curious - you are syaing the detector is not part 15 complaint. Is the
detector causing interference?

I wonder why so many ingrates come out of the wood work with these childish accusations against the U.S. & N.A.T.O forces. We, the United States of America are a member of the NATO team that has seen fit to reduce the criminal activities and inhumane treatment of any country that fails to comply with the demands of the World Majority.

As far as the F-117 downing goes, well we all ready planned for that. It just so happens that Iraq was less of an opposition then we expected, so don't get too comfy there with your single F-117 score. If you check the record, you'll see a greater number of Mig 28's & 29's splashed by NATO forces! Semper Fi from a US Marine!

> Haven't heard any activity. Where is everybody?
>

Hi Robert,

You're right. 6 meters tends to be pretty quiet unless there is some DX going on. Since you have an all-mode, you can try hanging out on some of the local repeaters on FM. Especially during commute hours. Check out 52.800 for a NET on Sunday evenings at 8pm. You can try calling CQ on 50.125 USB. This sometimes gets results locally but usually only on the weekends. I think there is a local 50mhz club that meets at Lockheed once a month. They have a website but I dont have the info with me right now.

The 50Mhz spring sprints are on May 15-16, 1999. Used to be sponsered by ARRL but now some national clubs have picked up the batton.

checkout:

http://www.vcnet.com/KN6LA/6m.html -->> list of California repeaters

http://www.6mt.com --->> Internet 6 index

http://user.super.net.uk/~equinox

http://raven.cybercomm.net/~slapshot/dxing/50prop.html 50mhz Internet Logger

Last one has tons of links to other 6m websites.

Hope to catch you on the airwaves..

73's

Antonio, KF6UEF

7469. Please price this equipment for me.

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-30 00:00:00 UTC
From: "Larry W. Nicholas" <nicholas@silcom.com>
Message-ID: <01be7ad8$ad071640$0cc847cf@default>
Source record: 146916

Could some price some amateur equipment for me. I need to sell this, as it is part of my fathers estate and I have very little knowledge of it's value.

1 Kenwood TS-140S HF Transceiver with microphone/manual
1 Astron RS-20A Power Supply
1 Hustler 6-BTV Trap Vertical Antenna
80' of coaxial cable

I have two pictures of this Transceiver, listing it's features if that will help. I can email them to you.

I believe the equipment is about 8 years old, and is in excellent condition.

Any help would be appreciated.

Thank you.

The ARRL has a complete QST index going back to 1915. It's accessible
via the members-only portion of the ARRL website
(http://www.arrl.org/). Alternative, it can be installed in your
computer -- in segments, as you buy the corresponding CDs -- with the
QST View (QST on CD-ROM) product.

Message-ID: <nwrM2.28130$FZ5.9923@news.rdc1.sfba.home.com>
Source record: 146777

You may want to consider using 4 steel slinkies (2 on each leg) stretched to about 40-45 feet total length (fine tune the exact length for resonance) fed with a 1:1 balun off coax.

With the right support like rope-off-center-post-supported 1.5" PVC tubing on a 2" PVC mast up as high as possible, you can work very find DX on 80m. I've even done this off the ladder on the back of my RV and it worked fine.

Don't know how much power it can handle, but be careful of the high voltage dissipation at the ends. I'd put big pie plates or multiple spikes on the ends if I were operating much over 100 Watts. Your weakest link will probably be the balun-to-slinky connection.

7487. Greek Maritime SVA crossband to Amateurs

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-31 00:00:00 UTC
From: k0hb@arrl.ORG
Message-ID: <370264A2.5BEB@arrl.org>
Source record: 146785

```
LAST MORSE TRANSMISSION OF ATHINAIRADIO "SVA" FOR AMATEURS
-----------------------------------------------------------
From: Greek Telegraphy Club
To : All CW Lovers Athens Greece, March 29th 1999
Dear CW freaks worldwide

In occasion of cease the Morse Code in the Maritime Mobile Service, the
Greek Telegraphy Club (GTC), decided to reactivate for one and last
time,
Tue Mar 30 01:40:08 1999 44.154.8.21:1332 - close PBBS from 'sv1aaw-1'
the well known Greek Coast Station "AthinaiRadio" (SVA).
This coastal station has been recently discontinued its radio telegraph
service to the merchant marine, after 88 years presentation on airwaves,
but still continues to serve the world marine community, using other
operational modes, as SSB, TOR, and Satellite Services, but not further
morse code.
AthinaiRadio SVA, belongs to the Greek Telecommunications Organization,
owned by a state company named (OTE), and keeps transmission and
reception sites, few miles of Athens in the country side.
The Greek Telegraphy Club (SV-CW-C), having deep and warm relations with
many other CW clubs worldwide, feels very happy to invite all of you, to
participate the last CW transmission of SVA, a transmission which will
be
devoted entirely to the WW amateur fraternity.

These transmissions will take part at the follow weekends:
April 3/4, April 10/11, April 17/18, April 24/25, 1999
-----------------------------------------------------------

The frequencies of SVA are:

Working Khz Listening Khz (Ham bands)
----------- -------------------------
SVA2 4239,4 3525
SVA3 6344 7025
SVA4 8704 7025 and 10125
SVA5 13029 14035
SVA6 16966 14035 18085
SVA7 22595,7 21035 24905 and 28035

SVA will be on watch all above mentioned days from 04:00 to 21:00 UTC
-------------------------------------------------------------------

The transmit antennas are Log Periodics, Rhombics, and Bobtail Curtains,
while the reception antennas are directional multiple element yagis.
The operational power will varies between 5 to 15 KW.
```

All amateur contacts will be confirmed with pleasure via the SV bureau.
A special QSL indicating this unique contact is already created, and
it will be available to all who they demand one.

A large number of GTC members, who are experienced DXers and Contesters,
are (on red alert situation!), fully prepared to hit the airwaves
waiting
for your call !
We expect to meet you all ...
best regards & 73
de Yorgos, SV1NA (on behalf of SV-CW-Club)

April 2, 1999
Target: rec.radio.amateur.*; uk.radio.amateur

Welcome to the W8MMQ Wire, for April 2, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: the FCC crackdowns continue; Sputnik 99 to be launched soon; vanity callsign fee to rise slightly; Joe Walsh to be at Dayton Hamvention; upcoming contest information; and much more!

THE FCC CRACKDOWNS CONTINUE
Well, the FCC continues to crackdown on rules violators. The ARRL recently reported that the Commission is investigating a Texas amateur who allegedly operated outside of the ham bands.

Leonard Martin, KC5WHN, of Houston, Texas, is said to have operated between "channels" in the CB band. FCC officials used direction-finding equipment to track Martin, and monitor his transmissions on February 27 at 27.535-MHz and 27.545-MHz, and on March 15 27.370-MHz.

When approached by the FCC and local authorities, Martin refused an inspection of his station.

Riley Hollingsworth, of the FCC, has spoken with Martin about the matter. Hollingsworth tells the ARRL, "This subjects him to a large fine for unlicensed operation and refusal to allow an inspection, plus loss of his license."

This is just the latest example of a large effort by the FCC to clean up the amateur radio bands. The FCC will continue to work with the ARRL and other amateur radio operators across the country to help get rid of the "bad eggs" that bring about a negative image of our hobby.

W8MMQ/KC8KFZ

"MINI-SPUTNIK" 99 TO BE LAUNCHED SOON
Called RS-19, a new "mini-Sputnik" satellite is scheduled to be launched on April 2, on its way to the Mir space station. Once there, it will be hand launched into space.

The satellite will transmit 7-second stored voice messages, in numerous languages.

RS-19 will operate on 145.815-MHz, with an output power of about 200 milliwatts. A tiny battery will transmit 10 different messages, each separated by a 7 second pause.

Visit http://www.ccr.jussieu.fr/physio/f6bvp/ for more information on the satellite, and when it is expected to go into operation.

W8MMQ/KC8KFZ

VANITY CALLSIGN FEE TO RISE SLIGHTLY
The cost of applying for an amateur vanity call sign is expected to rise slightly this fall. In a just-released Notice of Proposed Rulemaking involving assessment and collection of regulatory fees for Fiscal Year 1999 (MD Docket 98-200), the FCC has proposed increasing the vanity fee to $1.42 per year or $14.20 for the 10-year term.

The current vanity fee is $13. That figure, originally proposed at $1.29 per year (or $12.90 for the 10-year term) was "rounded up" to $1.30 per year by the FCC when it was implemented last fall, so it's possible the FCC might adjust the final number up or down to an even dollar figure this time as well.

The FCC projects 6800 vanity applications in FY 1999 for a total revenue figure of more than $96,000.

The vanity call sign business has continued to be brisk over the past year and picked up slightly after the vanity call sign fee dropped from its high of $50 to $13 last September. The FCC reports it received a total of 12,152 vanity applications during 1998--slightly more than 1000 a month; however, not all applications have resulted in call sign grants. That trend continued in January and
February. The FCC got more than 1400 applications in each of those two months.

The vast majority of applications last year were filed electronically. The FCC reports that fewer than 20% of last year's applications arrived on paper. The Commission's Gettysburg office currently takes approximately three weeks to process a vanity call sign application.

Taken from the ARRL Letter, 3/26/99

JOE WALSH TO BE AT DAYTON HAMVENTION
Entertainer Joe Walsh, WB6ACU, will be this years Dayton Hamvention banquet entertainment. This, according to Hamvention Chairman Dick Miller, N8CBU who tells Newsline that Walsh and his band will appear in concert at the gathering.

For those of you not aware, in addition to being an avid ham operator, Joe Walsh has created some of the most memorable guitar work in the history of rock and roll. This in his own solo work and as a member of the group -- The Eagles.

1999 marks the second consecutive year that the Dayton Amateur Radio Association has opted to sponsor a musical event as a part of Hamvention. Last year, country singer Ronnie Milsap, WB4KCG, provided a

truly knock-out show.

For more information on Hamvention '99 visit its website at:
http://www.hamvention.org/.

Taken from Amateur Radio Newsline, 3/26/99

SIX METERS BEGINS TO COME "ALIVE"
This past weekend, many reported that six meters opened quite nicely, in various parts of the world. Six meter email reflectors and web sites were active with the accounts of those excited about the return of the "magic band."

Many of the contacts reported were on sideband, or CW, but a few long distance contacts were also reported on FM, and on the FM calling frequency, 52.525-MHz.

Check out the UK Six Metre Group's web site at http://www.uksmg.org/notice.htm, for the latest reports of six meter activity.

Other good web sites to check out include: the Six Meter DX Bulletin at http://www.qsl.net/oz6om/; and the Internet Six News, at http://user.itl.net/%7eequinox/50dx.html.

W8MMQ/KC8KFZ

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The Low Power Spring Sprint, sponsored by the Slovak ARA, will be held from 1400-Z to 2000-Z on April 5. Operate CW only, 160, 80, 40, 20, 15, and 10 meters. Operate single operator only, single band, three bands, all bands.

International Marconi Day is taking place on the 24th of April to celebrate the birth of Guglielmo Marconi. The event is again being organised by the Cornish Radio Amateur Club. Participating stations will operate from 0001 UTC until 2359 UTC on the 24th of April on all HF bands plus 2-metres. The main mode of operation will be SSB, but all modes are permitted and are actively encouraged. (Information taken from the Radio Society of Great Britain)

DX REPORT
From Revilla Gigedo, XF4BEF will be active until the 2nd of April, using CW, SSB and RTTY on 6 to 160 metres. This counts as NA-115 for the RSGB Islands on the Air Award Programme.

From Turks and Caicos Island, VP5/IK2GSC and VP5/IK2SFZ will be on the air until the 5th of April on 160 metres. This counts as NA-002 for IOTA.

From Tsushima Island, JA6CM/6 will be operational using both CW and SSB from the 2nd to the 5th of April.

And from Mozambique, C91W is still active using SSB on 10 metres.

These DX news items came from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE.

AMSAT France has announced that one of the astronauts on board the Mir space station - Jean Pierre Haignere - has the callsign FX0STB. He is operating the Mir VHF FM station on 145.985MHz. The QSL manager for FX0STB is: Radio Club F5KAM, QSL Manager Mir, 22 Rue Bansac, 63000 Clermont Ferrand, France.

SPOTLIGHT: FEATURED AMATEUR RADIO WEB SITE
From time to time, we review great web sites that have something useful to offer to the amateur radio community. We look at dozens of sites per week, and with the help of the many emails we receive from our readers, we pick one of these great sites and present it to you here.

This time, we feature the UK Six Metre Group web site.

This web site is great for any radio amateur, but is designed with the six meter enthusiast in mind.

You will find news and current happenings for the six meter band, six meter DXpedition updates, email lists, links, and much more!

I thoroughly enjoyed my stay, and I hope that you will too. Just visit http://www.uksmg.org/, and begin a "walk" through their many pages.

If you have found a web site that you think we should review, just send the url to Dan/W8MMQ at w8mmq@voyager.net. We receive a lot of mail, but will try to get back with you as soon as possible.

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire. We hope that you have enjoyed it, and please, feel free to pass it along to others.

To read the W8MMQ Wire online, visit http://my.voyager.net/w8mmq/. An archive of past newsletters is now available from the web site.

Information from the following sources was used in the production of this newsletter: Amateur Radio Newsline, the ARRL Letter, the RSGB web site, and other published reports.

7491. WARNING! Watch out for Amateur Electronic Supply (AES), Las Vegas - Very Shabby Business Practices

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-31 00:00:00 UTC
From: K6JMB@arrl.net
Message-ID: <3702679a.40246921@cnews.newsguy.com>
Source record: 146789

This is to let you know that if you purchase something from Amateur Electronic Supply (AES), Las Vegas and they make an error in your order, they will blame you and not take responsibility for their mistake. This can cost you money and aggravation that make dealing with them a bad experience.

I ordered a set of Kent Twin Paddles from them last week - the model TP-1, costing $149.95 plus shipping. What I received yesterday was the Titanic Straight Key, SK-1, costing #129.95. When I called to let them know they sent me the wrong thing, they said it was "my mistake" and refused to accept responsibility. They expect me to pay shipping both ways for the returned item and will not send the correct item till they receive the key back "in the same condition as it was sent in." No doubt, they will say the key is now damaged or something and try to further screw me. What they don't know, is that I know how to play this game too, and win. Needless to say, I've ordered the paddles from a more reputable place, not AES.

Well, I checked their bill and they indeed charged me for the TP-1 key which costs $20 more than the SK-1 they sent me. Nonetheless, it is still "my fault." I forsee a long and boring series of interactions with these jerks to get this straightened out. Luckily, I used a Visa card and my credit union is absolutely terrific about this sort of thing. The guy I dealt with, Squeak, is the local AES manager and is one of the most non-customer oriented people I have ever dealt with. I will never do business with these people again and will do all I can to let others know what jerks they are in the hope they will get what they deserve and go out of business.

Hams spend too much money on equipment to get treated like this.

Be forewarned.

Whew! I'd not had this problem with AES. But then, I've not ordered from that store.

Perhaps ordering from Vegas is a "gamble"?

I have half a degree in electronics engineering and yet we've never even touched a lot of the principles that are involved with Ham radio (*or any radio for that matter.) Anyway, I have yet to even take a test for my no code licence because I know that I am nowhere near ready for it...
Are their any resources available online that would help me learn enough of the basic principles to at least pass the no code test? What I am lacking in mostly is proper transmission tech's (IE: what's allowed and not allowed for non-station operators and so on), any background in ameteur regulation and rules...

Which basically means, "I don't know Cr*& about it, but I want to learn."

I thank you for any help at all on this matter.

Near mint 160-10 Meter transceiver with digital display, CW filter,
operator and service manuals. Very low hours...it still has the original
final tubes. No problems, a few documented reversable mods added from
Kenwood and QST hints and kinks. Two BNC connectors added on back to allow
external reciever. Asking $350. Local pickup in the Detroit MI area
preferred. I am the second owner (non smoker) and have had it since early
eighties.

Err.... sorry about that I meant to say...

I have a R-1000 that is reading 2kc low , i.e when listening on 3898 the
display shows 3896..
This is on all bands, I don't have the doc's.

Where do I adjust the Digital Display?

Has this happened to you more than once with AES? The guys at the Milwaukee store are great! I've ordered from them a few times, been in their store twice, but I've always received excellent treatment. They are always so cheerful and eager to help. It only takes one ashhole, though, to make a business look bad.

Good luck!

You can use a 12v car battery, it is a very "linear power" source. Also I
noticed your 10db over 9 on the trollometer.
Jeff was that you that coined troll-o-meter? I love it!

Northern Amateur Relay Council of California Inc.

NARCC NEWSLETTER -
APRIL 1999

Lots of news this year! As you know, if you were at the spring meeting last
year, you the membership requested that NARCC reorganize to provide a
better service to the members. It has been a tough year, with many hours of
back breaking work by the board, coordinators and additional help from
ham radio computer experts!

So far we have accomplished the following items:

On line web page at http://www.narcc.org

On line mailer at narcc@narcc.org

On line frequency directory

On line data base, accessible by the members.

Reloaded about 90% of the NARCC data in computer.

Publish a Frequency directory for sale at radio stores.

Issued membership cards and instructions for members to update
data on line.

Printing a interim coordination certificate for each member to
examine
and correct.

As I write this, the frequency directory is being printed, and each
member
will get a copy when you check in at the meeting. We will also have
interim
coordination certificates, good for the balance of this year to pass out
at
the meeting. You will get a permanent one, good for two years after the
first
of next year if you meet the following criteria:

1. Your data in the system is updated and correct.

2. You have been published in the past, and there have been
no

changes warranting a new coordination.

3. There are no objections on file against your
coordination.

4. You held coordination, (Sanction), in the past and it
conforms to
#2 above.

Please note and read the Policy & Procedures in the frequency directory.
A
change of call, trustee, or system rep DOES NOT require re-coordination.
Just an update.

Also please note that system updates DO NOT require a fee! They are
FREE. A new application for an original request for coordination, or if
you
move the repeater and it has to be re-coordinated will generate the
$20.00
fee

The $20.00 annual membership fee includes free updates for ALL of your
systems. Not just one!

Also, if at all possible, please renew your membership by mail to the
Post
Office box by April 10th. This will insure that you are a member of
record on
the meeting date for voting purposes. Bring your membership card you
received in the mail with you. I will also have a stack of cards that we
did not
have good addresses for at the meeting.

We have much more work ahead of us, and hope to have the bulk of it done
by the end of this year. Among the items are: Finish updating the data
files
with corrections. This information will have to come from YOU the
members.
We have many records with missing fields, names and addresses! I admit
that this comes from lost records, improperly filled out green sheets,
and a
lack of updates that were probably sent to NARCC, but never made it into
the system. We have some records that have not been updated for several
years!

With your help and support, we can correct this situation.

Attached is the report from the reorganization committee Chairman, John
Ronan, K3ZJJ, Which tells it like it is.

I hope to see you all at the meeting.

Don Smith

President, NARCC

NOTICE OF SPRING MEETING April 17th 1999

The annual Spring meeting of NARCC will be held at the Contra Costa Water District Building on Concord Ave. in Concord starting at 1000 hours in the large meeting room. Same place we have met in the past. (Same street that the Concord Airport is on.)

COORDINATORS WANTED!

Interested in helping out with coordination duties? Talk to the board about your qualifications after the general meeting. The board will meet right after the general meeting closes.

Publication of new coordination applications will be published on the web page and in the fall newsletter prior to the September meeting. Please be patient while we get the data up to date

REPORT OF THE NARCC REORGANIZATION COMMITTEE

The following represents only the personal opinions of John Ronan K3ZJJ, the Chairman of the Reorganization Committee. The following opinions do not necessarily represent the views of the NARCC Board of Directors, individual NARCC Directors, Officers, Committee Chairman and the NARCC Coordinators. The following touches upon many controversial issues. The NARCC organization believes that each director, officer and member is entitled to represent their own personal views and you are encouraged to do so at the April 1999 General Membership Meeting.

A quiet revolution his been taking place within the NARCC organization during the past year --since the April 1998 General Membership meeting. Few people recognized at the time the significance of the approval by the General Membership of a Reorganization Committee which has been chaired by John Ronan K3ZJJ.

A further significant event which transpired at the April 1998 General Membership Meeting was that a bare majority of new Directors was elected to the Board which has permitted the implementation of the recommendations of the Reorganization Committee. Without this bare majority on the Board of Directors, nothing could have ever been accomplished. In fact, the substantial progress we have made towards reforming NARCC would have been impossible prior to April 1998,and despite the new majority on the Board of Directors, the process has been very difficult and contentious.

For many years, prior to the April 1998 General Membership Meeting, the reorganization of NARCC would have been unthinkable. The reality of NARCC was that neither the General Membership nor the Board Directors constituted NARCC. Rather, the NARCC organization consisted of less than a handful of members on the Coordination Committee, who considered themselves responsible to no one, but themselves --- and who denied access to the coordination database to all but those few members of the Coordination Committee, who formed the anointed high priesthood of NARCC. In point of fact, this "secret" Coordination Committee database in
many instances was inaccurate, incomplete and often existed only in the less than perfect memory of the individual coordinator.

In essence NARCC has been comprised of two organizations:

(1.) The Coordinators who considered themselves to be an independent organization with plenary authority and

(2.) A "show" organization comprising the Board of Directors and the General Membership who were merely "window dressing," but without any real authority. As a consequence of this fact of life, the "real" NARCC organization was truly that of a less than a handful of independent coordinators, one of whom declared, even after being fired by the Board of
Directors, "You canï¿½t fire me,I am NARCC!"

In fact, the former Chairman of the Coordination Committee does not even reside in the NARCC area, he has not appeared at General Membership Meetings for years, and has appeared at only two Board of Directors meetings over the past several years: first to protest the appointment of
the undersigned to the Board of Directors and second, to attempt to mend fences, while at the same time protesting that the Board of Directors had
overstepped its authority by implementing reforms.

These fundamental political problems within NARCC have been the root cause of most of the legitimate frustrations complained of for years by the
General Membership. Your new Board of Directors has worked very hard over the past year to responded to your complaints and concerns. We agree completely with your criticisms of and your frustration with NARCC!

This is not to say that there have not been excellent NARCC coordinators.
An example of an excellent coordinator is George Burton K7WWA who replaced Bob Wilkins the former UHF coordinator. George has generated the vast majority of those coordinations issued by NARCC over the past year. He has resolved some very difficult interference and coordination disputes intelligently and in a manner that has been fair to all parties.
Furthermore, George has an excellent reputation in the field. I have

received many compliments for George from repeater owners and operators where George has volunteered to help them solve technical problems and to improve the technical quality of their operations. Regrettably, George's business demands and family obligations have lead him to resign. This is especially regrettable since George would be the leading candidate for Chairman of the Coordination Committee, after the resignation of our prior Chairman.

In contrast, our prior Chairman has resigned over the fact that the NARCC organization is finally issuing Coordination Certificates to repeater operations which have been legitimately on the air for years, if not for many decades, but without receiving acknowledgment from NARCC that they have been coordinated.

In my opinion, the following are the accomplishments of your Board of Directors during the past year (in order of priority):

(1.) The issuance at the April 17, 1999 General Membership Meeting of Coordination Certificates to at least those repeater operations within the NARCC organization who have been published.

(2.) The issuance of NARCC Membership Cards with individual Organization Numbers and Database Access Numbers for all members to access their "Green Sheet" coordination data on the NARCC Database via the Internet.

(3.) The development and implementation of the NARCC Coordination Database on the Internet which required hundreds of volunteer hours of programming by Ray Montagne AC6QJ, our Electronic Data Base Manager. These volunteer services which Ray has provided are worth conservatively at least $25,000.

(4.) The installation of an independent NARCC Internet Server by Tim Barrett K6BIV, at his own cost. The NARCC Internet Server is exclusively dedicated to the NARCC Database.

(5.) Endless hours of collecting and verifying coordination data by Ray Montagne, Tim Barrett and Paul Hammer,KA6CHJ (who has been a tireless and dedicated member of the NARCC Board of Directors for many, many years).

(6.) The installation of the NARCC Web Page by Tim Sivils KE6FSE, providing up to date information to our General Membership including Board of Directors meeting minutes and General Membership meeting minutes, coordination activities, news affecting NARCC and Amateur Radio in general and other information of significance to our NARCC members.

(7.) The publication of the 1999 Northern California Repeater Directory, which will be sold in radio stores as a convenience to the Amateur Radio community and as an income source to the NARCC organization.

(8.) The involvement of the NARCC organization in the National Frequency Coordinators Council, a nation wide organization of Frequency Coordinators, and serving as the single point of contact with the FCC and
ARRL..

(9.) The revision of the NARCC Policy and Procedures which provide: (a) the
broadening of the organization's charter to include Spectrum Management, (b) to improve the fairness, openness, responsiveness and efficiency of the
NARCC coordination and certification process, and (c) to restore the ultimate authority of the NARCC organization to the General Membership.

(10.) New streamlined By Laws to move most of the operative provisions into the NARCC Policy and Procedures, while keeping those required for corporate registration with the State of California.

The work of the Reorganization Committee began with the July 1998 Special
Edition of the NARCC Newsletter which contained a Membership Survey. Over one hundred-fifty responses were received. These responses to the survey have provided invaluable guidance and direction to the Board of Directors, which we have sought to implement over the past year. It was very clear from your responses to the Membership Survey (1.) that the General Membership believed that the NARCC organization was failing,and in desperate need of reorganization. And, (2.) that you would be willing to
work with the new Board of Directors over this past year, if there was a reasonable chance to bring reform to NARCC. Although we have not achieved all of our very ambitious goals over this past year, we believe we
have made a very substantial progress, particularly after many years, if not
many decades, of neglect.

Much has been accomplished, but much more needs to be done. To this end, we hope that you our General Membership will continue to support your Board of Directors in our efforts to finish the task of reorganizationt.

My most sincere gratitude to the members of the Reorganization Committee who have worked so hard on your behalf and to the critical and invaluable
support of a majority of the NARCC Board of Directors. The members of the
Reorganization Committee include: Don Smith W6NKF, Dick Schultz AA6DL, Tim Barrett K6BIV, and Ray Montagne AC6QJ who has dedicated hundreds of hours to the programming and installation of the NARCC Database.

John K3ZJJ

NOTICE

If you have received this newsletter, and are no longer connected with a repeater system, or are living out of state, please advise by return mail who
has taken your place, or if the repeater system is still in operation. Our
printing costs and postage are a severe drain on the organizations finances. If you would like to get the news letter on the web page tather
than in the mail also advise us of this fact. Thank you. NARCC, Inc.

I have just acquired a Galaxy II and it has several modifications in it. The one that causes this radio to be a real bear to tune-up is the modulation modification. I have been led to believe that there has been a transistor pulled from the circuit. Does anyone know what the modulation modification is for this radio? I'd like to return this radio back to near stock.
Also, I see that the fine tuner has a jump in it when I go to the minus side. As I dial it down, it seems to go down smoothly until the very last part, and then it jumps down over 10kc. I am wondering if this is a VCO adjustment.
One last thing. The receiver is very clear on stations that are very close, but the sensitivity of the receiver leaves a lot to be desired for the distant stations. Is this inherent with this radio?
Thanx in advance:
M:)

I was gonna keep quiet until I saw the comparison to Milwaukee, I bought an HR-2600, oh mabye ten years ago while in CA from the Vegas store. Upon powering it up I noticed a good 3/4 second delay between tx and rx on CW, not too bothersom on phone but sheesh 3/4 second? Impossible to contest with. When I called the Vegas store to ask about it I said this makes the rig almost usless in a high speed exchange or during contest style operation, the guy said Hmmph I've got thousands of satisfied customers with that rig that would tell you otherwise, that's the way it works. Great, thanks for the help...click.

When I called the Milwaukee store and got through to Miles he said, oh yea just change capacitor #xx to a smaller value it's in the TR delay circuit, I changed it and voila only a few milliseconds of TR break in. Your right, it only takes one. Glad someone in Milwaukee was willing to spend 20 seconds with me on the phone to help. I realize the profit margin is low on amateur equipment but I don't think Terry paid for that&#65533; Beech Starship with lottery winnings :) They should have responded in a more professional mannor especially since your invoice shows an incorrect amount billed.

QST QST QST

RESULTS: 1999 SKN (SILENT KEY NIGHT) QSO PARTY

31 MARCH, 1999 2400Z

Results are just in from the 1999 Silent Key Night QSO party. Once again, participation was up. "What with the aging ham population and all," said International Silent Key ARL President Vic Clark, W4KFC, "we expect double the QSOs of Field Day by 2002!"

Of course, the highlight of SKN this year was the participation of JY1. Even on a 'dead' band, His Majesty's CQ creates quite a pileup. "Took an awful lot of the burden off of me," laughed Barry Goldwater, K7UGA. "For the last few years, I couldn't carry on a normal on-air conversation. People kept breaking in looking for a report and a QSL. But this year I was just one of the guys. You know, the King was a great man, and it's a shame he's here so soon, but I have to admit he made it a more enjoyable contest for me," said the late Senator.

And what would SKN be without the sounds of "CQ SKN DE W1AW"? Yes, the OM himself was back, fresh from an appearance on a History Channel series on the firearm.

File under "some people never learn:" A W6 amateur fell off his 100' tower (again!) trying to re-attach a coax that blew off in a storm earlier this year. "That does it," he commented. "I'm going to get one of those climbing belts. Maybe next year." And a W4 electrocuted himself (again) when he knocked over the 807 he had carelessly placed on top of his Henry Radio kilowatt. Despite the mishaps, both fellows are... well... the same as before. "If I wasn't here already, I'd definitely be showing up for next year's contest," said the humbled W4. "I guess I really should have tried that QRP thing..."

This is a very grave subject. We all need to set some ghouls to win a contest, but trying to work all SK's is likely to be a dead end. Especially when digging around for that contact. The smell might get you coffin. The cold and dark might even give you a code. The rigs they use are likely de-parted. And you don't stand a ghost of a chance...

From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <7drrrd$cq7$5@clarknet.clark.net>
Source record: 146854

Hello. I'm interested in getting a rotatable diapole for 80m, but I can't seam to find one that's still being sold today. I was wondering if anyone had any suggestions for one. All I need is one that will handle 1500w, cover the whole band, and perhaps have a little gain to it. I would prefer a "brand name" item (like Hy-Gain, KLM, KMA, Cushcraft, etc), but let me know if you have any suggestions. Thanks a lot for reading and in advance.

Bill,

I have a Ham Radio index that I put together just by copying the appropriate December multiple year indexes. It covers all 268 issues. The last year was a partial and I had to copy the table of contents for all those issues.

I don't know of a downloadable one. I've worked a little on scanning it and OCRing it but little luck so far. It would be a monumental typing task.

If you would like a copy of the Ham Radio Index I can probably get it copied for $6 plus a $1 for shipping. It is 30 double sided pages......Let me know...Rick...W5RH

==========

I remember many years ago reading in QST about a gentleman who built a 2 element 80m yagi. He used a 60-70 foot tower for the boom, and a high taper on the elements helped to shorten them.

Maybe building a rotatable dipole is an option.

7541. GAP, and MFJ

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-31 00:00:00 UTC
From: bcolenso@aol.com
Message-ID: <19990331022945.05104.00000392@ng37.aol.com>
Source record: 146869

Well, after reading all the feedback about GAP antennas, I have decided NOT to go in that direction.

As a Novice in the early '80s, and later as an Advanced, I had good success with a Butternut verticle mounted on the roof of my house. (I could break a pile-up with only 100 watts, even on the rare occasions when I pulled the mic out of the drawer.) I thought I had one a few weeks ago on eBay, but I was out-bid with less than 15 seconds to go.

So now I think I'll just build a few antennas untill I can find something else. I can put up an inverted V, and am also thinking about a 40m loop (can I also use this on 15m?).

Also, how good of equipment does MFJ build? I know years ago that MFJ stood for *Mighty Fine Junk*. But that was a long time ago. I'm interested in an antenna tuner with several balanced and unbalanced outputs (maybe a built-in dummy load), and also a keyer for the Bencher BY-2 Paddles that I bought.

Thanks,

Bob

A month of maritime related amateur radio activity is about to commence.

The activity is in two parts:-

1. In the year in which the UK is to close it's HF maritime radio
station, Portishead Radio/GKA, four UK amateur callsigns will be
active from 1st April from one of Portishead's equipment sites.
These are
GB0GKL to be found on 3515 and 2m packet
GB0GKA to be found on 7015 and 10115
GB0GKB to be found on 14015, 14045 and 18085
GB0GKC to be found on 21045, 24895 and 28045

In partnership with these stations, others located in countries of
the old British Empire will represent former "Area Scheme" stations.
A list of these stations can be found at
http://www.qsl.net/gm3zdh/coast/index.htm
or
http://www.users.zetnet.co.uk/rdixon/crs/specialevent/index.htm

2. Over the weekend of 10th/11th April, about 100 stations throughout
the world will celebrate 100 years of Coast Radio Stations. These
stations will be located at or near sites of Coast Radio Stations
past and present.
Again, lists of these stations can be found at the websites at
http://www.qsl.net/gm3zdh/coast/index.htm
or
http://www.users.zetnet.co.uk/rdixon/crs/specialevent/index.htm
